2. The data.—Glimpses of the coming Kingdom of God, more or less vivid and detailed, are found from Amos onward, in the Psalms also, and to some extent in the historical writings, even those which deal with the remote past. Of these data none can claim to be much older than the age of the first literary prophets; some may be younger than the book of Daniel; the larger part, however, belongs to the period between Jeremiah and the Maccabees. The section of this long period which seems to have been most fruitful in visions of the ideal Kingdom is that of the Babylonian Exile, and the most barren section the first century after the rebuilding of the Temple (516 B.C.), unless, with some scholars, we assign the last eleven chapters of Isaiah to the period of Ezra-Nehemiah. The three events that occasioned the most clearly defined groups of data regarding the ideal Kingdom were the approach of the Assyrian power (722–701 B.C.), the fall of Jerusalem (586), and, the destruction of the Babylonian kingdom by Cyrus (538). In view of the first of these events, Amos and Hosea, Isaiah and Micah, spoke of a great future beyond the approaching day of evil; in view of the second, Jeremiah wrote; and, in view of the last, a part at least of Is 40–66 was composed. The Psalms which contain general features of an ideal future seem to presuppose such an acquaintance with the nations and with suffering as came to Israel with the Exile, and those Psalms that may concern an individual king of the Davidic line, as 2, 18, 21, 45, 61, 72, 89, and 110, are most easily understood as written after the fall of Jerusalem.

3. Jahweh and the ideal Kingdom.—The invariable and supreme factor in the great future is Jahweh. On this all prophetic writings are at one. Whatever agents assume prominence now and again, it is always Jahweh who is the efficient cause of the new and more perfect age. It is Jahweh who brings back the dispersed of His people (Am 9[14f.], Hos 11[10f.], Is 11[11f.], Mic 2[12], Jer 3[14], Ezk 11[17-19] etc.); Jahweh who gives material prosperity in the land of Israel (Hos 14[5], Jer 30[19], Ezk 34[25], Is 27[2-6], Jer 31[4], Ps 69[35], Is 66[12]); Jahweh who makes a new people for His new land, washing away the filth of the daughters of Zion (Is 4[4]), making a new covenant with His people (Jer 31[31-34]), giving them a new heart (Ezk 36[26]), and putting His spirit upon them for ever (Is 59[21]); Jahweh who judges the nations (Am 1[2] etc.), brings foreigners to His temple (Is 56[7]), and sends blessings on all flesh (Is 2[3] 55[5]). The ideal future presents itself as a time when Jahweh reigns in Zion over His people (Is 24[23], Mic 4[7]), and teaches His ways to all nations (Is 25[6]). This relation of Jahweh to Israel's ideal future is rooted in Israel's past. It is not something quite new, but a glorification of the old. The Mt. Zion of the ideal future is but the ancient mount made higher (Is 2[2]), and the new people are people of a new covenant with Jahweh, more inward than the old (Jer 31[31-34]). Thus at all points the ideal Kingdom is an idealization of the greatest facts of Israel's past.

4. Davidic rule and the ideal Kingdom.—A common but not constant feature of Israel's ideal future, important but never supreme, is the element of a Davidic rule. Davidic 'rule,' or house, we must say rather than Davidic 'king,' because it is relatively seldom that attention is fixed on a partic-

ular individual, and even in these exceptional cases it may be doubted whether the prophetic vision ever rested on an individual who was thought of as having no successor. Again, Davidic rule is to be preferred to the term 'Messiah,' which, as W. H. Bennett says (*Religion of the Post-Exilic Prophets*, Edinburgh, 1907, p. 348), is 'inconvenient and misleading.'

Davidic rule, it was said above, is a common but not a constant feature of Israel's ideal future. We find it in Amos (unless $9^{11f.}$ be regarded as post-Exilic), Hosea, Isaiah, and Micah, in Jeremiah, Ezekiel, Haggai, and Zechariah, perhaps in Ps 2 and Ps 18, but there is only a shadow of it (Is 55^4) in that section of the OT which is so rich in visions of the future Kingdom (Is 40–66); it is not found in the Minor Prophets (except in those mentioned above), in Is 24–27, or in Daniel. This element of Davidic rule, where found, is of very unequal significance. Thus, *e.g.*, in Hosea it is almost lost in the glory of Jahweh's presence (3^5). In Ezekiel it is obscured by the ideal temple; the Davidic representative is a 'prince,' with princely rather than kingly functions (Ezk 45^7 $46^{2.\ 16}$ etc.). In the Psalter it is represented vaguely at times (Ps 21 and 61 [?]), and again with authority (Ps 110). It stands out most conspicuously in Is $9^{6f.}$ and 11^{1-10}. This fluctuation in the value of the Davidic rule may have been due to changes in the political environment or to individual peculiarities of the various writers. In the prophetic outlook on an ideal future the Davidic house, as has been said, is more commonly mentioned than an individual Davidic king. In Amos and Hosea it is only the line of David that comes into view; in Jeremiah and Ezekiel an individual is indeed mentioned (Jer $23^{5f.}$, Ezk 34^{23}, and possibly a different individual in Ezk 21^{27}), but their common references are to a royal house (Jer 33^{22}, Ezk 37^{25}); in the later visions of the book of Zechariah it is again the Davidic house that is considered ($12^{7.\ 8.\ 10.\ 12.}$ 13^1); in the Psalms both the house and an individual king appear (Ps 45, 72, 2, 110); in 2 S 7^{12-16} the divine promise concerns the royal succession down to the end; in Isaiah and Micah, Haggai and Zechariah (1–8), we confront primarily an individual. In view of the prevailing prophetic usage, in view also of the fact that Jeremiah and Ezekiel speak of an individual king and at the same time of a royal house that is to exist indefinitely, it seems doubtful whether, in the relatively small number of passages which contemplate an individual king, we are to suppose that the author, in any case, thought that this individual was to be without a successor. This would amount to attributing everlasting existence to him, which the texts nowhere seem to warrant. If claimed for Is $9^{6f.}$ and Ps 110, then these passages are not to be reconciled with Jeremiah and Ezekiel, for an individual and a succession of individuals are different conceptions. But Is $9^{6f.}$ may be concerned rather with a quality of government than with its agents. It is hardly possible to hold any other view if Isaiah had the young Hezekiah in mind as the man through whom Jahweh was about to introduce a new era for Israel. As to Ps 110^4 more can hardly be said with confidence than this, that, if there was in the OT the conception of a Davidic king who should reign for ever, this word of the Psalm would seem to confirm it. Alone, it is not sufficient to form a basis for such a doctrine.

It remains to sketch the character and limits of the Davidic rule in the ideal future. This rule is conceived in general as an improved copy of the historic rule of David. The name 'David,' not 'son of David,' is often given to the ideal ruler, as though he were thought of much as a re-incarnation of the heroic king who was a man after God's own heart. Special stress is laid on the ethical character of the ideal ruler and line, and the picture in this respect surpasses all that was ever realized in the founder of the royal house. The spirit of Jahweh rests upon him (Is 11^2); he is beautiful and glorious (Is 4^2); his righteousness is so perfect that it is likened to the righteousness of Jahweh (Jer 23^6); he loves peace, and makes it, not only in Israel but among the nations (Is 9^6 11^{6-9}, Zec $9^{9f.}$, Ps $72^{3.\ 7}$). In the attitude of the ideal house towards the wicked and the Gentiles the language of physical force and a tone of severity are employed. Thus the Davidic ruler slays the wicked with the breath of his mouth (Is 11^{1-10}) or with swords and arrows (Ps 45), and, unless the Gentiles do homage to him, he will dash them in pieces as a potter's vessel (Ps 2). In the time of Isaiah it was thought that the nations would flock to his standard (Is 11^{11}), but in the time of Ps 110 the outlook on the nations is one of judgment. This function of judging is habitually attributed to Jahweh, but the execution of judgment is sometimes given to the king (*e.g.*, Ps 2, 45, 110). Thus the king of the ideal future is an ideal man, and in his rule he is an idealized David. The picture varies with the times, for it reflects what the leading spirits of different generations held most dear in a ruling house. The question of natural or supernatural cannot be raised in connexion with the king or the royal line of the ideal future (Is 7^{14} 9^6, Mic 5^2, historically interpreted, do not transcend natural limits).

5. The material side of the ideal Kingdom.—The ideal future of Israel is invariably bound up with the land which Jahweh gave to the fathers. It is a future on the earth and on the hither side of the grave. With Amos, the shepherd-prophet, the material side of the ideal future is naturally set forth in rural imagery (9^{13}), which is variously enriched by subsequent writers (Is 32^{15} 29^{17}, Jer 31^{12}, Ezk 34^{13-16} 36^{25} 47^{1-12}, Is 30^{25} 51^3, Jl 3^{18}, Zec 14^8). To the material blessings of Israel's ideal future Hosea added a covenant of peace between Jahweh and wild beasts (2^{18})—an image elaborated by Isaiah (11^{6-9}) and the unknown prophet of the Exile (Is 65^{25}). Ezekiel puts extermination in place of the covenant of peace (34^{25}), a circumstance illustrative of the freedom with which the prophets handled the details of the ideal future. With Isaiah, the city-prophet, a glorified Jerusalem comes into the foreground of the vision of an ideal future (4^5 30^{19} 33^{20}). Later prophets dwell on this feature (Jer 33^9 Is $62^{2f.}$ 60^{13} 66^{24}). The inhabitants of this ideal city and land are multiplied until the places are too strait for them (Jer 30^{19}, Ezk $36^{10f.}$ 37^{26}, Zec 10^{10}); they blossom as the lily, and cast forth their roots as Lebanon (Hos $14^{5f.}$); a little one becomes a thousand and a small one a strong nation (Is 60^{22}); no one says, 'I am sick,' and the days of the life of a man are as the life of a tree (Is 33^{24} 65^{22}). Once, indeed, the prophetic language rises to the assertion that death is swallowed up for ever (Is 25^8), which is probably to be regarded as affirming no more than is affirmed in Is 65^{20}, that the child shall die a hundred years old. Very long life shall be the lot of those who inherit the ideal Kingdom.

6. The spiritual side of the ideal Kingdom.—In the prophetic view of the ideal future the spiritual side, though resting on the real past, departs from that past more widely than does the material side. The present paragraph will set forth what is implied in the statement already made, that the supreme factor in the ideal Kingdom is Jahweh. In the first place, the people who are to constitute the community at the beginning of the ideal future are a 'remnant' (Is 4^3 and often). They are the good 'kernels' that Jahweh does not suffer to fall and be lost (Am 9^9), the chosen ones who are left when

Jahweh makes a 'full end' of judgment in the land (Is $10^{22f.}$). Thus the beginning of society in the ideal future was thought of somewhat as the new planting of the race after the Flood. The new stock is not sinless, but it is purified and ennobled. Even Jeremiah thinks of men in the ideal future as needing priestly intervention with offerings and sacrifices, though the covenant with Jahweh is then written on the heart (Jer $33^{18.\ 22}$). With Ezekiel the need of a temple and priesthood is conspicuous (40–48), though he thought of the people as having experienced a profound change (37^{12}).

Nor did Isaiah, while declaring that every one who was left in Zion should be called holy (4^{3}), think of a sinless race of men. Like the post-Exilic Malachi (3^{1-4}), he thought rather of a people who were morally and spiritually quickened and exalted, but yet capable of sin (Is 33^{24}). The hopeful prophet of the Exile, though seeing by faith a city and land in which Jahweh would take delight (Is 62^{5}), a Zion whose children were all to be taught of God (54^{13}), and all righteous (61^{3}), nevertheless believed that this new Zion would have a temple (44^{28}), and seems to admit the existence of sin when he says that the 'sinner' being a hundred years old shall be accursed (65^{20}). Thus, while neither the little company with whom the ideal future society begins nor their descendants are thought of as sinless, their moral and spiritual state is indeed exalted. The prophets are fond of setting this forth in two closely related terms, that of knowing Jahweh and that of intimate association with Him. The new Israel shall address Jahweh as Ishî, 'my husband' (Hos 2^{16}), and Jahweh shall rejoice over His people as a bridegroom over his bride (Is 62^{5}, Zeph 3^{17}). Much more frequently the happy state of the redeemed in the great future is summed up as 'knowing Jahweh.' That is the key to Isaiah's vision of peace (11^{9}), the fruit of Jeremiah's new covenant in the heart (31^{34}), and it is promised to all the children of the tempest-tossed Zion (Is 54^{13}). Of the depth and vital character of this knowledge we have indications in Hosea's sorrowful word, 'My people are destroyed for lack of knowledge' (4^{6}), in Jeremiah's connecting it with the new inward covenant (31^{33-34}), as well as in his thought that the shepherds who shall teach the new Israel will be according to Jahweh's heart (3^{15}), and clearly in the statement of the Exilic prophet that Jahweh Himself will be the teacher (Is 54^{13}). This is a knowledge that permeates the entire man, the will and the heart no less than the understanding. In Ezekiel and certain post-Exilic writings the moral and spiritual state of restored Israel is conceived less profoundly. Ezekiel's New Jerusalem is dominated by ritual. He speaks indeed of a new heart, but it is to be manifested in keeping the old statutes and ordinances ($36^{26f.}$). In Joel and Zechariah the holiness of redeemed Israel seems to be thought of as physical separation from everything that is ceremonially unclean. No stranger shall pass through Jerusalem, no Canaanite come into Jahweh's temple (Jl 3^{17}, Zec 14^{21}).

Such were the prophets' thoughts of the individual member of the ideal Kingdom. Other features of that Kingdom remain to be mentioned. Judah and Israel, which had been separated for three hundred years when Jeremiah wrote, are again to walk together (Jer 3^{18}, Ezk 37^{15-17}). Justice and righteousness are to prevail everywhere, in the wilderness as well as in the fruitful field (Is 32^{16}). Moreover, the new knowledge of Jahweh bears fruit not only in right relations between man and man, but also in great joy and abiding peace. The redeemed shall not sorrow any more (Jer 31^{12}), but shall have a wreath of everlasting joy upon their heads (Is 35^{10}). Jahweh will create Jerusalem a rejoicing and her people a joy (Is 65^{19}). Such statements, since sin and death are still to exist in the ideal future, must be understood in a relative sense; not less so the announcement that a deep, universal, and abiding peace will characterize the new Israel (Is 2^{4} 11^{9} 32^{15} 54^{13}, Zec 9^{10}).

To the spiritual side of the ideal Kingdom belongs its religious relation to the nations. This is variously conceived by different prophets. It is not touched by Amos or Hosea. According to Is $2^{2f.}$ all the nations flow unto Jahweh's house in Jerusalem, apparently by a spontaneous movement. Jahweh's house is exalted so high that they see it and are attracted. They have confidence that Jahweh will teach them, and they come with a purpose to walk in His ways. Since peoples do not readily change their gods, this conception of Isaiah that *all* nations would be drawn to Jahweh's house implies that, in his view, the religion of the new Israel would be far more powerful in the lives of men than religion had ever been in the past. There is no suggestion of missionary work on the part of Israel in the conversion of Egypt (Is 19). Jahweh sends a deliverer to Egypt in a time of crisis, and in consequence Egypt worships Jahweh. Not only so, but the prophet appears to teach that the Assyrians become worshippers of Jahweh through the influence of Egypt. This outlook of Isaiah has no parallel for a century and a half, but in the latter part of the Exile and in the post-Exilic age we hear again of Israel's religious relation to the Gentiles in the ideal future. In Deutero-Isaiah, exclusive of the Songs of the Servant, and in Ps 2 and Ps 72, the religious influence of Israel is associated with the idea of its political dominion, and owes to this fact a certain tone of severity (Is 45^{14} 60^{12}). In one of the late visions attributed to Zechariah (14^{16-19}), the remnants of the nations are to go up to worship Jahweh and to keep the Feast of Tabernacles; if they do not, they are to be punished. Far different is the conception of Jahweh's purpose in Is 25, which may be later than the return from Babylon: Jahweh is to give a great banquet in Zion to all nations, and is there to destroy the 'veil that is spread over all nations.' There is no hint of political subjection to Israel. The nations come into the spiritual light and joy which Jahweh gives.

Still more significant is the conception of Israel's ideal religious service to the Gentiles which is found in the Songs of the Servant. It is not now in Zion, but afar, in their respective homes, that they receive Jahweh's salvation (Is 49^{6}). It is not at a banquet given by Jahweh, but through the efforts of His faithful people, that the nations have the 'veil' removed. It is not here through the largess of the King that the Gentiles are blessed, but through the quiet and patient testimony (Is $42^{2f.}$), through the bitter suffering and martyrdom, of the Servant (Is 52^{13} 53^{12}; cf. 61^{6}). With this profound view of Israel's ideal relation to the spiritual welfare of the Gentiles we may associate the prayer of the psalmist (67), that God would bless Israel *to the end* that His salvation might be made known to all nations, and also those Psalms in which the faithful people seem to be Jahweh's 'anointed,' to serve Him among the Gentiles (Ps $68^{20.\ 24.\ 28.\ 35}$ $22^{27f.}$; cf. 84^{9}). This view of Israel's spiritual relation to the world is the deepest ethical thought of the OT on the subject.

7. **Realization of the ideal Kingdom.**—To judge intelligently of the prophets' visions, we must, of course, assume the prophets' point of view. When we do this, and look out upon Israel's ideal future, we see that what the prophets anticipated did not come to pass. The great pacific king of Isaiah's vision did not come, nor did the event which was

to have immediately preceded it, that is, the breaking of Assyria's power; the mountain of Jahweh's house was not exalted above the hills, and the nations did not flow unto it; Egypt was not brought to Jahweh; nor did Egypt lead Assyria to worship the God of Israel. The ideal future of which Jeremiah spoke did not dawn after seventy years (29[10]), nor did the Davidic deliverer of Ezk 29[13-21] arise at the close of the forty years' desolation and captivity of Egypt. The hope associated with the return of the exiles whom Cyrus released (Is 41[1ff.] 45[1ff.] 60) was not fulfilled; nor was Zerubbabel the Davidic king who was to bring in the long-expected day (Hag 2[23], Zec 6[12] 4[9]). As with these hopes which contained an element of time, so with the others. The vision of Jahweh's glory in restored Israel and Zion—a city most splendid, a temple surpassing Solomon's, and the Shekinah rendering sun and moon unnecessary—did not find an embodiment when Jahweh brought back the captives; nor did the reign of peace among the nations and peace in Nature begin. The restored people were not multiplied until they overflowed into Gilead and Lebanon, the land was not more fertile nor the hills and mountains more plentifully supplied with water, life was not prolonged so that a child died a hundred years old, nor was prosperity secure from one generation to another. Judah and Israel were not re-united on the return from Babylon; indeed, Israel never returned.

As for the people who came back to Jerusalem, they were not the men of the ideal future of whom Jeremiah and Deutero-Isaiah had spoken. They were doubtless a chosen remnant in respect of their loyalty to Jahweh and their patriotic devotion to Zion, but the literature that deals with post-Exilic history plainly shows that they were not a people in whom Jeremiah's new covenant was realized, not a people taught of Jahweh in a unique manner and established in righteousness. The one conspicuous event of the prophetic outlook that was accomplished was a return from captivity. This does not appear to have been on a scale commensurate with the prophetic expectation, or to have been carried out with the glory with which it had been depicted; nevertheless it was an event of such surpassing importance for the development of religion in the earth that it justified the promise of those prophets who had sought to kindle Israel's hope and faith by their words of a better future.

Another fact is to be noted in this connexion. The prophets themselves were well aware that prophetic expectations had been disappointed, and yet they did not cease to speak with confidence of God's purposes for Zion. In 734 B.C. Isaiah expected, within a little while, the Davidic prince who, the Assyrian power having been broken, would inaugurate the ideal Kingdom; and then, a generation later, in 702 B.C., though his earlier expectation had not been accomplished, he spoke again, with equal assurance, of the turning back of the invader and the dawn of a new age (Is 30). Sennacherib's army was, indeed, turned back, but the hoped-for age was not therewith inaugurated. A century later, in the new crisis that had arisen with the approach of the Babylonians, the prophet Jeremiah put the new future, which Isaiah had looked for in his own day, beyond an exile of long duration. Deutero-Isaiah foresaw Israel's return in connexion with the overthrow of Babylon as an event of the near future, and associated the ideal Kingdom with that return; and, though this hope was not realized, Zechariah, in those very days, declared that Jahweh had returned to Zion, and that He would gather His dispersed into the midst of Jerusalem and would do good to His people (8). Later, perhaps much later, we hear an unknown prophet foretelling that after the distress which was to befall Jerusalem the new age would dawn, when Jahweh's name would be one in all the earth (Zec 14[9]). Thus the vision of an ideal future which had arisen with Amos and Hosea did not fade into the light of common day, though its realization was again and again vainly though confidently expected. As time passed it underwent modifications more or less important; but the succession of the prophets, undeterred by its failure to become embodied on earth, and bating no jot of heart or hope, looked for its realization in a future not too remote.

This persistence of hope, taken together with the fact of a considerable element of change in the visions of the ideal future, seems to show that the prophets were not greatly concerned with the particular details of their pictures, but were established in certain great principles of Jahweh's character and will. Their thoughts of times and seasons, of agents and methods of fulfilment, of fit material and political accompaniments of the coming ideal State, might vary one from another, and might all be very imperfect or quite wrong; they still held to an ideal perfecting of Jahweh's gracious will in a glorious Kingdom for His chosen people. Whether the vision of the prophets in its essential elements found its fulfilment in Jesus and His work, or is yet to find it there, is a question that lies beyond the limits of this article.

II. *In the NT.*—1. **Introductory note.**—For the study of the Kingdom of God in the NT two points are of fundamental importance: (1) the use of the term by Jesus, and (2) the word 'Church' as used by the early disciples. The present article is limited to the former. In determining the content of the term 'Kingdom of God' in the thought of Jesus, the hope of progress lies in a more careful analysis and valuation of the various sources of His teaching.

The apocalyptic literature, beginning with Dn 7[13, 14], influenced the form rather than the content of Jesus' teaching on 'the Kingdom of God,' or, in particular, on the consummation of that Kingdom. Even this influence is often exaggerated. The *Logia* contain very little that presupposes an influence of apocalyptic literature (as Mt 19[28] 24[26-28, 37-42]), and Mk 13 cannot all be ascribed to Jesus. The thought of the nearness of the Kingdom of God sprang out of Jesus' consciousness of God's presence with Him, and was not at all due to the apocalypses. Moreover, what is most characteristic of Jesus, His supreme emphasis on the ethical-religious life, is hostile to the spirit of much of the apocalyptic literature, for the authors of that literature lived in visions of the consummation.

2. **The data.**—It is significant that the term 'Kingdom of God' (or 'Kingdom of heaven') occurs in the material which is peculiar to Matthew about three-quarters as many times as in the *Logia*, the oldest Gospel, and the matter peculiar to Luke taken together (*Logia* eight, oldest Gospel eleven, matter peculiar to Luke three, matter peculiar to Matthew seventeen). We infer that it was a favourite term with the editor of the First Gospel—an inference that receives support from the fact that he has sometimes prefixed the term to parables where its use appears to be extremely vague (*e.g.*, Mt 25[1]). If, however, the term was a favourite one with this editor, we should form our judgment regarding the prominence of the conception in the teaching of Jesus, not from his usage, but from the *Logia* and the oldest Gospel. Having regard to these sources, we must say that the term does not seem to have been employed by Jesus with great frequency. The *Logia* may count slightly less than 200 verses, and the words of Jesus in the oldest Gospel a few more

than that, and, as was said above, the former source contains the term in question but eight times and the latter only eleven. The matter peculiar to Luke contains approximately 164 verses which are words of Jesus, and in these the term 'Kingdom of God' occurs but three times, while in Matthew's peculiar material, which contains about 187 verses which are words of Jesus, the term is found seventeen times. Further, it may be noted here that no one is reported to have asked Jesus what He meant by 'Kingdom of God,' and that He never felt called upon to declare in what sense He used the term. His thought on the subject, like His thought on Messiahship, was left by Him to be inferred by those who had seeing eyes and understanding hearts. His handful of disciples occupied Jesus' thought far more than did the 'coming of the Son of man with the clouds of heaven,' and the least detail of their spiritual life was more important in His sight than all the computations of the apocalyptists regarding the day and hour of the 'end,' or how the 'end' was to be ushered in.

3. Content of the term 'Kingdom of God' as used by Jesus.—(*a*) *His agreement with the Prophets.*—The word of the oldest Gospel (Mk 1^{15}) that, when Jesus came into Galilee, He preached, saying, 'The time is fulfilled, and the kingdom of God is at hand,' shows clearly His consciousness of being in the prophetic line, a continuator of the prophetic hope of a divine Kingdom. But, when we hear what He said of the Kingdom at different times, it becomes plain that He was not a continuator of the prophetic hope in its entirety, and that His thought moved in line with what the great prophets had said of the spiritual side of the ideal Kingdom. He said nothing of the restoration of the Davidic throne, and nothing of the glory and riches of Palestine in the day of fulfilment. The only kingship that He contemplated was the Kingship of God (Mt 13^{41} is regarded as unauthentic). That this rule of God was regarded by Him as a teaching of the OT appears, *e.g.*, in the manner in which it is introduced into the model for prayer which He gave His disciples. They are taught to pray 'Thy kingdom come' (Lk 11^{2}), and it is taken for granted that they will understand this term. The petition is, indeed, a petition for the fulfilment of such OT words as Is 24^{23} and Mic 4^{7}.

(*b*) *Personal elements in His usage.*—(1) Jesus' thought of the Kingdom of God is not altogether identical with the spiritual side of that Kingdom as seen by the prophets. It is more inward and personal. Thus we read in the *Logia* that the Kingdom of God is like unto leaven (Lk 13^{21}), and in the oldest Gospel it is compared with the earth which, once the seed is deposited in it, carries forward its development until the corn is full (Mk $4^{26\text{-}29}$). In both cases the Kingdom is a force working from within. It is self-propagating in the parable of the Leaven, and in that of the Automatic Earth it is a seed that the heart mysteriously germinates and matures. These parables go further than the prophets in their implications regarding the nature of man and his relation to God.

(2) Again, it is peculiar to Jesus, in distinction from the prophets, that He thought of the Kingdom of God as having a lowly beginning. The heart of a child is the most favourable soil for it (Mk 10^{14}). The mustard seed is the fittest symbol of it, both in smallness and in the size of the plant which it produces (Mk 4^{30}).

(3) The usage of Jesus differs from that of the prophets, further, in that He speaks of a Kingdom of God as existing on both sides of the grave, or in two spheres, an earthly and a heavenly. No difference between the earthly and the heavenly Kingdom of God is clearly marked in His words (Mt 6^{10} is probably a Christian expansion of the last clause of Lk 11^{2}). The *Logia* have one saying, possibly two, in which the Kingdom of God is equivalent to heaven (Mt 8^{11} = Lk 13^{28}, Lk 6^{20} = Mt 5^{3}), and the oldest Gospel has one such saying, possibly more (Mk 9^{47}; cf. 10^{14} $10^{23\text{-}25}$ 14^{25}).

(4) Finally, the usage of Jesus differs most widely from that of the prophets in that He thought of the Kingdom as having actually begun with Him and His disciples. In an important sense it was still future, but it was also present. This is clearly implied in a saying of the *Logia*, though it does not contain the term in question. Jesus said to His disciples (Lk $10^{23f.}$), 'Blessed are the eyes which see the things that ye see: for I say unto you, that many prophets and kings desired to see the things which ye see, and saw them not; and to hear the things which ye hear, and heard them not.' This reference to the OT hope determines the meaning of the words 'what ye see' and 'what ye hear'; it is the fulfilment of the prophetic vision of a better future. Again, in the oldest Gospel there are at least two sayings of Jesus that belong here. He said to His disciples: 'Unto you is given the mystery of the Kingdom of God' (Mk 4^{11}). The 'mystery' was something to be revealed and known, and the disciples were learning it in that very hour. Secondly, to a scribe who answered discreetly, Jesus said: 'Thou art not far from the kingdom of God' (Mk 12^{34}). It would seem a necessary inference from this word that His own disciples were regarded by Him as *in* the Kingdom of God. Quite in accord with this is the saying preserved in Lk $17^{20f.}$, 'The kingdom of God cometh not with observation: neither shall they say, Lo, here! or, There! for lo, the kingdom of God is within you.' The new age had begun; therefore that of the Law and the prophets had come to an end. On the other hand, it is equally clear in the oldest sources that Jesus looked for the coming of the Kingdom of God in some future day. He taught His disciples to pray for it (Lk 11^{2}), and He assured them that it would come with power within a generation (Mk 9^{1}). The reconciliation of these apparently discrepant views lies in the nature of the Kingdom of God as Jesus conceived of it. Neither view can be ignored by the historical student. Both are contained in the conception of the Kingdom as a seed that develops and matures for the time of harvest (see, further, art. JESUS CHRIST, iii. *B.-C.* **2**, above, pp. 510–513).

GILBERT.

KING'S EVIL.—This is the name given to scrofula, a disease which was supposed to be cured by the touch of the king of England. The same belief was held regarding the king of France. The Lat. *regius morbus* originally denoted jaundice, but, with *coninc sevel* (Mid. Dutch) and *le mal le roy* (Old Fr.), was applied to scrofulous affections, and especially glandular swellings of the neck and face (see *OED*, *s.v.*). Doubtless other ailments were at times popularly included in the phrase 'the Evil' or 'the King's Evil.' There was a belief that the seventh son could cure the malady (H. Crooke, *Body of Man*, London, 1615, p. 340). This is sometimes extended to the seventh son of a seventh son, and even to the ninth son of a ninth son. This belief also was common to England and France. The method was by stroking. Fantastic medicines were prescribed for the curing of the Evil, such

as goose dung, viper's flesh, and lion's blood (Gulielmus vanden Bossche, *Historia Medica*, Brussels, 1639, Index, *s.v.* 'Scrophulis remedia').

Edward the Confessor is said to have been the first to cure by touch those suffering from ulcers. William of Malmesbury states that some of these miracles happened in Normandy before he came to the throne (*Gesta Regum*, London, 1840, ii. 222). It is, however, remarkable that Caxton's *Golden Legend*—a 15th cent. unhistorical view of the canonized king—whilst presenting an idyllic picture of England in his day and recording several of his miracles, does not mention any by touch. Shakespeare (*Macbeth*, IV. iii. 146) expresses the view of a later age when he makes Malcolm say:

> 'Tis call'd the evil:
> A most miraculous work in this good king;
> Which often, since my here-remain in England,
> I have seen him do. How he solicits heaven,
> Himself best knows: but strangely-visited people,
> All swoln and ulcerous, pitiful to the eye,
> The mere despair of surgery, he cures;
> Hanging a golden stamp about their necks,
> Put on with holy prayers: and 'tis spoken,
> To the succeeding royalty he leaves
> The healing benediction.'

The touch is not mentioned among the reasons for Edward's canonization in the bull of Alexander III. About 1180 Peter of Blois (*Ep.* 150 [*PL* ccvii. 440]) mentions this kingly power as well known. There is no evidence of the rite under the Norman monarchs, but it appears to have been fairly continuous from Henry II. to Queen Anne.

There is a curious passage in Sir John Fortescue's tract on the title of the House of York that is not mentioned in the recantation which he was forced to make in 1471 as a condition of his restoration. Arguing that a queen regnant is not allowed by the Constitution, he says: 'And sithen the Kinges of England ben enoynted in theyre hands, and by vertue and meane thereof God commonlie healeth sicknes, by putting to and touching the maladie, by thenontinge hands; and also gould and silver handled by them, and so offered on Good Friday have ben the meane and cause of great cures, as it is knowne, and therefore such gold and silver is desired in all the world. Which good things must needs cease for all the time that a woman were so Queene of that land because that a woman may not be enoynted in her hands' (first printed in T. F. Clermont, *Life, Works, and Family History of Sir John Fortescue*, London, 1869, i. 498). In the corresponding Latin of the *Defensio Juris Domus Lancastriæ* the name of the malady is given—*regius morbus* (*ib.* p. 508). Fortescue's doctrine was not accepted either as to the throne or as to the power of healing.

Edward I. gave money as alms, but Henry VII. was the first to bestow the small gold medal, which Shakespeare assigns to the generosity of the Confessor. There are cases in which it was alleged that the Evil had been cured by wearing the touch-piece originally given to another sufferer.

The healings were performed mostly in London (by Charles II. at the Banqueting Hall, Whitehall), but the ceremony was possible wherever the Court might be; and Langley, Newmarket, Chester, Bath, Salisbury, and Oxford are known to have witnessed such functions. Easter, Whitsuntide, and Michaelmas were the usual seasons, and the hot weather was avoided.

The first separate treatise on the King's Evil is *Charisma* (London, 1597), by William Tooker, who declares that Queen Elizabeth cured many thousands. In 1602 William Clowes, a famous surgeon of his day, published *A right frutefull and profitable treatise for the artificial cure of the malady called in Latin Struma, and in English the Evill cured by kinges and queenes of England.* He professed firm belief in the healing power. Thomas Fuller, who when young had seen James I. touch in Salisbury Cathedral, also professes unwavering faith.

'If any doubt of the truth thereof, they may be remitted to their own eyes for further confirmation.' He further asks: 'Shall we be so narrow-hearted as not to conceive it possible that Christian men, the noblest of corporeal creatures, kings, the most eminent of all Christian men, kings of Britain, the first-fruits of all Christian kings; should receive the peculiar privilege and sanative power, whereof daily instances are presented unto us?' (*Church History*, ed. J. S. Brewer, Oxford, 1845, i. 387-390).

As the finances of Charles I. contracted, he substituted silver for gold in the touch-pieces, and many received only the imposition of the royal hands. The monarch regarding whose healings we have the fullest information was Charles II., who touched 90,798 persons. Evelyn, in his *Diary*, ed. W. Bray, London, 1890 (6th July 1660), gives a detailed account of one, and also notes that on 28th March 1684 there was so great a concourse of people, with their children, that six or seven were killed in the crush at the office where the tickets had to be obtained. Each applicant had to bring a certificate from the clergyman of his parish, and signatures of the churchwardens also were required by a proclamation issued in 1683. The parishes were expected to keep a register of the certificates they issued. At the public healings the king sat in his chair uncovered and surrounded by members of his court. One of the chaplains read the Gospel from Mk 16, and at the latter part of v.[18], 'they shall lay hands on the sick, and they shall recover,' the chief surgeon brought up the sick persons in order. The words from v.[18] were repeated for each person. The king stroked the face or neck, where the disease was evident, with both hands, and a second surgeon then took charge of the patient. The reading from Mark was finished after all the patients had been touched; and a second Gospel from the first chapter of John was commenced. At v.[8] the surgeons presented each patient a second time. The Clerk of the Closet, kneeling, presented to the king the gold medal on a white silk ribbon, which he then placed round the neck of the patient as the chaplain read v.[9]; the Gospel was continued to v.[14], and followed by prayers. At the close the Lord Chamberlain and two other noblemen brought linen, basin, and ewer for the king to wash his hands, and with this the ceremony ended. Such was the procedure under Charles II. The office for the healing appears to have been drawn up in the time of Henry VII. in Latin, and was in part a modification of the blessing for sore eyes, and the exorcism against evil spirits. This was sometimes modified. Elizabeth used the sign of the cross, which was omitted by her successors, but restored by James II., by whose authority the office was printed in English in 1686. It was reprinted along with the *Office for consecrating cramp rings* from a MS belonging to Dr. A. C. Ducarel, by F. G. Waldron (*Literary Miscellany*, 1789). The final modification was in the reign of Queen Anne, and was included in the Prayer Book, incorporating that of 1724, although George I. never performed the ceremony—a fact duly noted by his disaffected Jacobite subjects. The forms used by James II. and Queen Anne are given in the third and fourth editions of Hamon L'Estrange's *Alliances of Divine Offices* (1699, 1846). Occasionally there were private healings, when the ceremonial was less elaborate.

Patients were occasionally sent from various parts of the country at the partial cost of the places to which they belonged. In 1682 the Corporation of Preston paid 10s. for a bricklayer's son to go to London 'in order to the procuring of His Majesty's touch.' In 1687 5s. each was paid for two girls to be sent to Chester, where James II. then was (J. Harland and T. T. Wilkinson, *Lancashire Folklore*, London, 1867, p. 77). Similar payments from Ecclesfield, York, and Kirkham have been printed (W. Andrews, *The Doctor*, London, 1895, p. 19; H. Fishwick, *History of the Parish of Kirkham*, London, 1874, pp. 98, 106).

The Stuart pretenders as well as the Stuart kings claimed the healing power, and one of the charges

in the trial of the Duke of Monmouth was that he had touched children for the Evil. The last recorded instance of the rite occurred in the Jacobite rising of 1745, when Prince Charles Edward touched a scrofulous child at Holyrood Palace. 'Touch-pieces' were struck for James III. and Henry IX., *i.e.* the Old Pretender and Cardinal York. Thomas Carte, in the first volume of his *History of England* (London, 1747), in arguing that the healing power of the kings was not due to anointing, recited the case of Christopher Lovel, who went abroad to be touched by 'the eldest lineal descendant of a race of kings' who had not been crowned or anointed. This obvious reference to the Old Pretender led to a controversy, and the Corporation of London withdrew their subscription from the *History* (see J. Nichols, *Literary Anecdotes of the 18th Century*, London, 1812–15, ii. 495, where many details are given).

The power of healing the King's Evil was also claimed by the kings of France, and was said to have been given to Clovis at his anointment. Another account states that Philip I. was the first to touch, and that he was deprived of the power on account of his dissolute life. The ritual was settled by St. Louis. After coronation at Rheims, the king went on a pilgrimage to the shrine of St. Marcoul, who died in 658, and who was so successful in curing scrofula that it was called St. Marcoul's Evil after him. The sick were ranged in the church, or, when the number was too large, in the cloisters or in the park, where they were touched by the king and received a gift from the Grand Almoner. Healings are recorded by Charles VII. (1422), Louis XI. (1461), and Charles VIII. (1483). Cardinal Wolsey was present in 1527 when Francis I. touched 200 people. When Henry IV. was crowned at Chartres in 1594, as many as 1500 were present at a healing. His physician Laurentius asserts that 50 per cent were cured within a few days after being touched. Peter Lowe (*Discourse of the Whole Art of Chyrurgerie*[2], London, 1612) mentions the touch as used in France:

'The diseased first is viewed by the Chyrurgions, who findes it to be the kirnells or King's Evil, then the diseased is set on his knees, and presented to the king, who maketh a crosse on his forehead with his hand, saying: *Le roy te touche, Dieu te guerrie*, which is to say, the King doth touch thee, God make thee whole' (J. Finlayson, *Account of the Life and Works of Maister Peter Lowe*, 1889, p. 8).

Louis XIV. is said to have touched 2600 persons two days after his coronation, and 1600 on the Easter Sunday of 1686. Every French patient received 15 sous, every foreigner 30 sous. When Louis XV. was crowned, the shrine of St. Marcoul was brought to Rheims, and over 2000 persons were touched. The custom continued until 1776, and the authorized programme of the coronation of Charles X. included the healing ceremonial.

R. J. Dunglison (*History of Medicine*, Philadelphia, 1872, p. 209) asserts that the healing touch was not restricted to the kings of England and France; 'it appears to have been not unfrequently employed in Scandinavia.' He conjectures that it arose from Druidic practices—a theory for which there appears to be no evidence. The kings of Hungary were credited with the power of curing jaundice, to which the name of *morbus regius* was formerly also applied. The *Salutators* in Spain and the Netherlands claimed to cure sores by the touch, white linen, and prayers; but their efforts were prohibited. Valentine Greatrakes, an Irish gentleman, in 1662 conceived the idea that he could cure the King's Evil, and from that time until 1666 'stroked' a great number of people for scrofula, ague, rheumatism, and other diseases, with varying success. He accompanied his operations by prayer.

It may be noticed that in all these cures, whether by kings, seventh sons, or healers, the common feature is that of stroking with the hands. That many patients were apparently benefited by the touch need not be doubted. The change of air involved in a journey to the Royal Court, religious solemnity, the expectant attention, even the belief in the touch-piece as an amulet, would all tend to help the natural curative process. The history of the royal healing suggests that it is a fragmentary survival from a time when priesthood and kingship sometimes centred in the same person, and when, as disease was regarded mainly as demonic possession and medicine as exorcism and magic, the priest had often to exercise the function of the physician. It is noteworthy that in England the healings were most numerous in the reign of Charles II., when the 'patriarchal theory' of the origin of monarchy was held by the Royalists in an extreme form. But the materials at command are scarcely sufficient to warrant any broad generalization.

LITERATURE.—Most of the historical references are given in an art. 'On the Cure of Scrofulous Diseases attributed to the Royal Touch' by Edward Law Hussey, *Archæol. Journal*, x. [1853] 187 ff. (with engravings of touch-pieces). WILLIAM E. A. AXON.

KISMET.—Kismet is an Arabic word, meaning 'lot,' 'distribution,' 'fate.' It is not found in the Qur'ān in this philosophical sense, the idea of fate being there expressed by comparison with a bird: 'Every man's augury (lit. bird) have we fastened on his neck' (xvii. 14); 'your augury (bird) is in God's hands' (xxvii. 48). Zamakhsharī interprets thus: 'The source of good and evil is in God; and this is your destiny (*ḳadar*) or your fate (*ḳismet*). If God wishes, He gives you; if He wishes, He denies you.' In Qur'ān xxxvi. 18 we read: 'Your augury (bird) is with you,' *i.e.* 'Your evil destiny accompanies you.' The origin of this comparison is unknown.

The idea expressed by the word *ḳismet* relates to events of the earthly life; it is the share of good luck or of accidents, of fortune or of misery, which falls to each. The term is not used in a theological sense like the words *ḳadā* and *ḳadar*, which refer to man's good or bad deeds and to his destiny in the hereafter (see art. FATE [Muslim]).

The belief that each one's fate is settled beforehand by God, and that, whatever one may do, one can scarcely modify it, is popular in Muslim countries, and is often to be found in Muslim literature, especially among the poets and story-tellers. In the rich collection entitled *Al-Mustaṭraf* (Fr. tr. by G. Rat, Paris, 1899) there are several chapters on fate and destiny, on fortune and its vicissitudes.

A man said one day to the philosopher Buzurgmihr: 'I have seen an ignorant person enjoying the favours of heaven, and a wise man being excluded from them; hence I have understood that man has not in his hands the disposition of his fate' (*al-Mustaṭraf*, i. 711). A poet has written: 'I know very well that it is only God who can be helpful or hurtful' (*ib.* 713).

Sa'dī, in his *Būstān* (tr. C. Barbier de Meynard, Paris, 1880, ch. v.), groups several anecdotes in which he explains the idea of fate and the duty of resignation.

'Happiness,' he says, 'is a gift of the divine justice' (it would be more exact to say 'of the divine arbitrariness,' adding, however, that man has never the right to regard this arbitrariness as unjust). A clever archer can usually pierce an iron target with his arrow, but, when fate deserts him, he cannot

even make a hole in a piece of felt or silk. A poor man loses a penny and searches for it in vain; an indifferent passer-by comes along and finds the penny immediately. 'What is the use then,' concludes the poet, 'of struggling against the force of destiny?'

The following quatrain is from Abū Sa'īd or from Khayyām:

'If your situation is good, it is not the result of your clever measures; neither is it your fault if it is unhappy. . . . Live resigned and content, since the good and evil of this world do not depend upon you' (Hoceyne-Azad, *La Roseraie du savoir*, Paris, 1906, tr., p. 303).

In the story entitled 'The Story of the Sheik with the generous Palm,' in the *Thousand and One Nights*, a rich man twice gives a purse to a poor rope-maker to help him to free himself from his poverty; but scarcely has he received it than he loses it. Some one then gives him a worthless piece of lead, and this lead becomes the source of his fortune (tr. J. C. Mardrus, Paris, 1899–1904, xiv. 64 ff.; R. Burton, *Supplemental Nights*, London, n.d., iv. 341–365).

This doctrine of chance, which conduces to idleness and indifference, is one of the causes which hinder the progress of Muslim peoples in matters of economics. It is, however, only a popular belief, and is not accepted in theology, as has already been indicated in the art. FATE (Muslim).

LITERATURE.—This is given in the article.

B. CARRA DE VAUX.

KISSING.—Kissing is a universal expression (in the social life of the higher civilizations) of the feelings of affection, love (sexual, parental, and filial), and veneration. In its general use it is more or less symbolic, but in maternal and in sexual love it has an essential value of its own as a focus of physical emotion, which it not only expresses but stimulates.

1. General description.—A refinement of general bodily contact (the instinct to which is irreducible), kissing supplies a case, in the higher levels of physiological psychology, of the meeting and interaction of the two complementary primal impulses, hunger and love. It is remarkable that, though the act in its civilized form is very rare among the lower and semi-civilized races, it is fully established as instinctive in the higher societies. This is a case of an acquired character or of some corresponding process. Equally remarkable is the fact that a line can be drawn between the higher civilizations; thus, the kiss seems to have been unknown to ancient Egypt; in early Greece and Assyria it was firmly established, and probably its development in India was as early as the 'Aryan' age.

Touch is 'the mother of the senses,' and the kiss may be referred generally to a tactile basis, as a specialized form of contact. Animal life provides numerous analogies; the billing of birds, the cataglottism of pigeons, and the antennal play of some insects are typical cases. Among the higher animals, such as the bear and the dog, there is a development which seems to lead up to those forms of the act most prevalent among the lower races of man and also characteristic of the peoples of Eastern Asia. Far more similar, however, to the civilized human kiss and the non-olfactory forms of the savage kiss is the habit attested for cats of pressing or squeezing one another's nose.[1]

2. Forms of the kiss.—The lower types are incorrectly grouped by travellers under the term 'rubbing noses,' and various forms are often confused. The olfactory form occasionally includes mutual contact with the nose, as among the Maoris, Society and Sandwich Islanders, the Tongans, the Eskimos, and most of the Malayan races. The rubbing of noses, often styled 'the Malay kiss,' is described by Darwin thus: the giver of the kiss places his nose at right angles on the nose of the other, and then rubs it; the process occupies no longer time than a handshake among Europeans. Cook and others describe the South Sea Islands form as a vigorous mutual rubbing with the end of the nose, omitting the olfactory element.[1] Elsewhere, as among the Australians, general contact of the face occurs—'face-rubbing.'[2] In many lower races mothers lick their infants. But the typical primitive kiss is contact of nose and cheek; the Khyoungtha, for instance, apply mouth and nose to the cheek, and then inhale.[3] Among the Chinese, Yakuts, and various Mongolian peoples, and even the Lapps of Europe, this method is characteristic, and is thus described by d'Enjoy: the nose is pressed on the cheek, a nasal inspiration follows, during which the eyelids are lowered; lastly, there is a smacking of the lips. The three phases are clearly distinguished.[4] It is remarkable that this Eastern Asiatic method, typically primitive, should be retained by Chinese civilization. The Japanese have no word for kiss, and the act is known only between mother and child.

The European kiss consists essentially in the application of the lips to some part of the face, head, or body, or to the lips of the other person. Normally there is no olfactory element, and any tactile use of the nose is absolutely unknown. It is thus a distinct species, and to describe it as having been evolved from the savage form is erroneous. As a 'racial' habit, it distinguishes the European peoples, and their cultural or racial ancestry, the Teutons, the Græco-Romans, and the Semites, but it appears to have been unknown to the Celts.

As for its physiological derivation, we have excluded certain elements. Nyrop refers it to taste and smell; Tylor describes it as a 'salute by tasting,' d'Enjoy as 'a bite and a suction.'[5] Each of these definitions is untenable. Though popular metaphor inevitably speaks of taste, and even eating and drinking, there is nothing gustatory in the kiss.[6] Such suction as may be ascribed to it is merely the mechanical closing of the lips,[7] as in speaking and eating. This may be described as a refinement of biting, but it would be misleading. Similarly in abnormal forms some use of the tongue occurs. But no connexion with the bite can be maintained, except in the sense to be explained below. It is true that playful biting with the teeth is practised by savage mothers, and among various peoples by passionate lovers, but there is no derivative connexion between this and the kiss proper. The suggestion has been made that the kiss is practically a mode of speech. Emphasis is here laid on the weak or loud sound which often accompanies the 'sucking movement' (*sic*) of the muscles of the lips; this 'inspiratory bilabial sound' is compared to the lip-click of many barbarous languages.[8] The suggestion does not go far; the element of truth is the fact that the kiss,

[2] E. M. Curr, *The Australian Race*, Melbourne, 1886, iii. 176.

[3] T. H. Lewin, *Wild Races of S.E. India*, London, 1870, p. 118.

[4] H. Ellis, *Sexual Selection in Man*, p. 220, quoting d'Enjoy.

[5] Ellis, p. 66; Nyrop, p. 185. As regards smell, the incident of Isaac proves no connexion.

[6] W. W. Skeat, *Etym. Dict.*, London, 1898, *s.v.*, traces the word to a Teutonic base, connected with Latin *gustus*, Gothic *kustus*='test,' and 'kiss' is a doublet of 'choice.' This is, however, very doubtful. The word may be connected with the Lat. (loan-word?) *basium*, 'kiss' (cf. A. Walde, *Lat. etymolog. Wörterb.*[2], Heidelberg, 1910, p. 84 f.), and is frequently compared with Gr. κυνέω (for *κυ-νε-σω, cf. aor. ἔκυσσα), 'kiss' (so most recently P. Persson, *Beitr. zur indogerm. Wortforschung*, Upsala, 1912, p. 260, note 2), appearing with a different 'root-extensor' in Goth. *kukjan*, 'kiss.' O. Irish and Welsh have no Celtic word for 'kiss'; *póc* and *póg* are borrowed forms of Lat. *pax*.

[7] The *OED* defines kissing thus: 'to press or touch with the lips (at the same time compressing and then separating them).'

[8] Nyrop, p. 6.

like language, is a refinement of the nutritive processes of the mouth.

The kiss is a special case of tactile sensory pleasure. In it the lips (whose skin is the very sensitive variety between the ordinary cuticle and the mucous membrane) are alone concerned. The movement made is the initial movement of the process of eating. There is, no doubt, a true psychological nexus between affection and hunger, which is no less truly expressed in the mechanism of the kiss. The act is a secondary habit of the lips, just as speech is a secondary habit of the whole oral mechanism. The intimate connexion between the development of language and the masticatory processes of man has been drawn out by E. J. Payne.[1] The kiss, therefore, is not to be referred to the bite, or even to gustation, much less to mastication, suction, or olfactory processes. The primary movement of the lips is simply transferred to a metaphorical use, so to say, and their sensitiveness is applied to a secondary object, whose stimulus is not hunger, but the analogous emotions of love, affection, and veneration.

Lombroso has argued that the kiss of lovers is derived from the maternal kiss.[2] It is true that the latter is sometimes found among peoples who do not practise the former. The Japanese, for instance, are ignorant of the kiss, except as applied by a mother to her infant.[3] In Africa and other uncivilized regions it is a common observation of travellers that husbands and wives, and lovers, do not kiss. But all mothers seem to caress and fondle their babes. Winwood Reade has described the horror shown by a young African girl when he kissed her in the European fashion.[4] The argument, however, of Lombroso is of the same order as that which derives sexual love from maternal, and in neither case can there be any derivation, precisely because the subject during adolescence comes into a new physical and psychological environment, which itself is sufficient to explain a new reaction.

Some variation in the kiss proper (which we identify with the European) may here be noted. The kiss of North American Indian women is described as consisting in laying the lips softly on the cheek, no sound or motion being made.[5] This would not come under the Chinese criticism of the European kiss as being 'voracious.'[6] When Australian or negro women are mentioned as employing the kiss,[7] we may assume that it is of the olfactory variety. The former people (recently argued to be relatively high in the scale of human development) have one branch, the North Queensland tribes, where the kiss is well developed. It is used between mother and child, and husband and wife. In contrast with many early languages, the Pitta-Pitta dialect has a word for kissing.[8] As for distinctions in the civilized Western kiss, that of the ancient Romans still applies, though modern languages do not employ three terms for the three forms. In Latin, *osculum* was the kiss on the face or cheeks, as used between friends; ***basium*** was the kiss of affection, made with and on the lips; *suavium* (or *savium*) was the kiss between the lips, confined to lovers alone. The modern French retain, and other continental peoples (to some extent the English also) follow them, the distinction between the kiss on the cheek and the kiss on the mouth, the latter being reserved for lovers. Both in social custom and in literature the erotic symbolism of the lovers' kiss has assumed a remarkable importance among the French, who regard a kiss on the mouth, except in cases of love, as a real social sin.

It is interesting to note that Græco-Roman, Hebrew, and early Christian civilization have combined to form the modern European habit.

3. Social history.—Though kissing is said to be unknown in any form among the Japanese, prior to European influence, among the Indians of Guiana, the ancient Celtic peoples, and the ancient Egyptians, each statement is probably too dogmatic. The general conclusion is that the habit in some form or another has been prevalent since primitive times, and has received its chief development in Western culture.

Among the Greeks and Latins, parents kissed their children, lovers and married persons kissed one another, and so did friends of the same or different sexes.[1] The kiss was used in various ceremonial and religious acts. Very similar was the Hebrew practice,[2] with the exception that kissing between persons of different sex was discountenanced, though a male cousin might kiss a female cousin. The Rabbis advised that all such kisses should be avoided, as leading to lewdness, and restricted the kiss to greeting, farewell, and respect.[3] In Semitic life also there was more use of the ceremonial kiss than among the Greeks and Romans.

The early Christian habit of promiscuous kissing as a symbol of fellowship was an application of pagan social practice, and there are grounds for supposing that it offended the Hebrew element as it certainly shocked the Jewish Church.[4] This is St. Peter's 'kiss of love'; and St. Paul frequently writes: 'Salute one another with an holy kiss.' It possessed a sacramental value.

'The primitive usage was for the "holy kiss" to be given promiscuously, without any restriction as to sexes or ranks, among those who were all one in Christ Jesus.'[5]

Later, owing to scandals, or rather to such feeling as Tertullian mentions,[6] the practice was limited, and it was ordered that men of the laity should salute men, and women women, separately.[7]

The classical practice, rendered slightly more free by the early Christian extension, prevailed throughout the Middle Ages, with the curious detail that English women had more liberty than continental in kissing male friends. Erasmus in a famous passage describes the freedom possessed in this matter by English girls.[8] In Catholic ritual the kiss dwindled to more or less of a survival. In court ceremonial it persisted with other details of etiquette; and the same was the case with certain ecclesiastical and legal formalities. Knights after being dubbed, persons elected to office, and brides on marriage were kissed.[9] After the Renaissance a change appeared in England, and kissing became more and more restricted to parental and sexual relations. Thus, W. Congreve, at the end of the 17th cent., writes:

'In the country, where great lubberly brothers slabber and kiss one another when they meet; . . . 'Tis not the fashion here.'[10]

At the same time the practice of kissing between friends of different sex, other than lovers and relatives by birth or marriage, fell out of use. It had done so in France a century earlier, and the restriction was copied by English society.[11] In-

creasing moral refinement, or perhaps the increase of restrictions necessitated by an extension of individualism, may be assigned as a cause.

In modern social life the kiss is confined to lovers, members of the family, and women-friends. Between fathers and sons, and between brothers it does not survive adolescence. In continental countries it still persists, especially in France, between male friends, and this fashion is preserved between sovereigns. The courtly use of kissing a lady's hand as a mark of respect came from the court life of Renaissance times. It is obsolete in common life, but clings to the etiquette of great personages. As already stated, the distinction is carefully preserved among continental peoples between the kiss of affection and the kiss of affianced love.

4. Social and religious usages.—(1) In the etiquette, natural or artificial, of salutation, the kiss is a central point, where the relations involve tenderness or veneration, or where these emotions are supposed. Its importance is illustrated by various facts of language. The 'embrace' and the 'salute' are synonymous with it. Where the act is obsolete, language preserves its memory. The Spaniard says 'I kiss your hands'; the Austrian describes an ordinary salutation by the phrase *Küss d'Hand.*[1]

According to Rabbi Aḳiba, the Medes kissed the hand only.[2] Odysseus, on his return, was kissed by his friends on the head, hands, and shoulders.[3] In Greece generally inferiors kissed the hand, breast, or knees of superiors.[4] In Persia equals in rank kissed each other on the mouth, and those slightly unequal on the cheek, while one much inferior in rank prostrated himself.[5] Esau 'fell on the neck' of Jacob and kissed him.[6] Among the Hebrews the cheek, forehead, beard, hands, and feet were kissed; some deny the practice of kissing on the lips. The phrase in the Song of Songs does not prove its existence, but there is no *a priori* reason against it in the case of the lover's kiss.[7] The customary kiss in modern Palestine is thus described:

'Each in turn places his head, face downwards, upon the other's left shoulder ["falling on the neck"], and afterwards kisses him upon the right cheek, and then reverses the action, by placing his head similarly upon the other's right shoulder, and kissing him upon the left cheek. . . . A man will place his right hand on his friend's left shoulder, and kiss his right cheek, and then lay his left hand on his right shoulder, and kiss his left cheek.' This is a second form. A third consists in the following process—the giver of the kiss lays his right hand under the head of his friend and supports it while he kisses it.[8] The last appears to be referred to in Joab's assassination of Amasa.[9] It has been suggested that, when Absalom to gain popularity kissed the people, he employed the second form.[10]

Equals saluted one another on the cheek or head; so Samuel saluted Saul. Inferiors kissed the hands of superiors. If, in the betrayal of Jesus, Judas kissed his Master on the face, it was an act of presumption.[11] The fact that the kiss was passed over without remark seems to show that it was, as it should have been from disciple to master, a kiss on the hand. The Prodigal Son would kiss his father's hands before being embraced and kissed.[12] Inferiors also kissed the feet (the woman 'who was a sinner,' and would-be borrowers),[13] or, again, the 'hem of the garment.' Vassals, in the Assyrian inscriptions, show submission by kissing the monarch's feet. Similar homage may be assigned to the phrase of Ps 2^{12}, 'kiss the Son.' As an act of piety, the Pharisees practised kissing the feet, as did the pious generally.[1] The humiliation of the symbolic act of Christ in kissing the disciples' feet has been preserved till recent times by some religious orders, and even by European monarchs. The foot of the pope is kissed in ceremonial audiences. By the year A.D. 847 it was said to be an ancient usage. There are grounds for supposing it to be derived from a usage in the Emperor-worship of Rome.[2] Prostration is an instinctive expression of fear, awe, or adoration; to clasp the knees, as was the custom with Greek suppliants, is equally instinctive. The act of kissing the feet is a refinement of these. The OT phrase 'licking the dust' is doubtfully referred to the kiss upon the feet. In ancient India it was a familiar salutation of respect.[3] The feudalistic aspect of the little court held by the old Roman *patronus* is illustrated by Martial's epigram, which complains of the burdensome civility of the kisses of clients.[4] In the court ceremonial of mediæval and modern Europe, the kiss on the cheek obtains between sovereigns; subjects kiss the sovereign's hand. In mediæval Europe the vassal thus saluted the lord, while it was not unusual to kiss a bishop's hand.[5] In modern Europe a kiss conveying blessing or reverence is usually on the forehead. 'In Morocco equals salute each other by joining their hands with a quick motion, separating them immediately, and kissing each his own hand.'[6] The Turk kisses his own hand, and then places it on his forehead. The Arab kisses his hand to the storm.[7] Such is the gesture of adoration to sun and moon referred to in the OT, and also used by the Greeks to the sun.[8] It was the Greek and Roman method of adoration. In explanation of the gesture, Oriental folklore agrees with European in identifying life or soul with the breath. More exactly, the thrown kiss is a symbolical act, transferring to an object at a distance merely the essence of the kiss.

The kiss in its legal aspect is a natural application of the ideas which produced hand-shaking and similar modes of contact. Mediæval knights kissed, as modern boxers shake hands, before the encounter. Reconciled foes kiss as a sign of peace.[9] It was specially in connexion with marriage that the kiss, *osculum*, *oscle*, was prominent. *Osculum* was a synonym generally for *pactum; osculata pax* was a peace confirmed by a kiss; *osclare* meant 'dotare'; and *osculum interveniens* was a term applied to gifts between engaged persons. If one of them died before marriage, the presents were returned should no kiss have been given at the betrothal.[10] It is significant that the kiss was symbolical of marriage as 'initium consummationis nuptiarum.' In old French and mediæval law generally the term *oscle* was applied to the principle that a married woman kissing or being kissed by another man than her husband was guilty of adultery.[11]

(2) Besides the permanent objects of the kiss, in family and analogous relations, the relations of superior and inferior, lord and vassal, sovereign and subject, there are many others which, with more or less permanence, have claimed the kiss as a religious service. It is very significant of the affectionate element in religion that the kiss should have played so large a part in its ritual. The meeting-point between the social and the religious

aspect of the kiss is perhaps to be found in the application of the salute to saints and religious heroes. Thus, Joseph kissed Jacob, and his disciples kissed Paul.[1] Joseph kissed his dead father, and the custom is retained in our civilization of imprinting a farewell kiss on dead relatives. To suggest, however, that the act of Joseph proves the worship of Jacob as a divine being is against psychology.[2] All that can be said is that so fine a human sentiment is on the border-line between social and religious feeling. In mediæval Europe there was a similar feeling about the kiss of state. This is shown by the instances of Henry II. and St. Thomas of Canterbury, and of Richard I. and St. Hugh.[3] Similarly in social life generally; it is said that among the Welsh the kiss was used only on special occasions, and a husband could put away his wife for kissing another man, however innocently.[4] The early Christians exploited the social value of the kiss. Though in strong contrast to the Welsh custom, this is equally sacramental. It has been argued that the ritualistic 'kiss of peace' alone obtained among the Christians, and that the social salute was not practised. But the evidence is strong enough to prove the latter custom.[5] For St. Ambrose this was 'pietatis et caritatis pignus.'[6] The custom involved a peculiar sentiment, if we consider it in connexion with the Christian ideal and practice of love, in which passion was encouraged, though chastity was enforced (see art. CHASTITY [Christian]).

In the early Church the baptized were kissed by the celebrant and the congregation after the ceremony.[7] Roman Catholic ritual still includes the kiss bestowed on the newly ordained by the bishop. The bishop on consecration and the king when crowned received the kiss.[8] The kiss bestowed on penitents after absolution was connected with the kiss received by the Prodigal Son. The practice of giving a farewell kiss to the dead is probably connected with the old Italian rite of receiving the soul of the dying in his last breath. In the 6th cent. the Council of Auxerre (A.D. 578) prohibited the kissing of the dead.[9] Penitents were enjoined to kiss sacred objects.[10]

5. The kiss of peace.—First mentioned in the 2nd cent. by Justin,[11] the kiss of peace was one of the most distinctive elements in the Christian ritual. To Clement of Alexandria it was a 'mystery.'[12] The εἰρήνη was a preliminary rite in the primitive mass. Conybeare has suggested that it was derived from an institution of the synagogue.[13] Philo speaks of a 'kiss of harmony' like that between the elements; the Word of God brings hostile things together in concord and the kiss of love.[14] However that may be, the *pax* became a feature of both Western and Eastern ritual, more conspicuously in the former. St. Cyril writes:

'This kiss is the sign that our souls are united, and that we banish all remembrance of injury.'[15]

This kiss seems to have been given at the beginning of the offertory, between the washing of hands and the *sursum corda*. But, later, the kiss was in close connexion with the Communion. It has therefore been conjectured that the *pax* was twice given.[16] In the modern Roman ritual it is given only at High Mass, and rarely to any of the congregation. The celebrant kisses the corporal, and presents his left cheek to the deacon, with the formula *pax tecum*, answered by *et cum spiritu tuo*. The deacon conveys the kiss to the subdeacon, and he to the other clergy. In the Greek liturgy the celebrant says, 'Peace be to all,' and kisses the gifts, while the deacon kisses his own stole.[1] On Easter Sunday in the same church the congregation kiss one another.[2]

The fact that the Christians of the time of the younger Pliny were called upon, when arrested, to 'adore' the effigy of the Emperor was sufficient to emphasize the ritual importance of the kiss. *Adoratio* ('the act of carrying to the mouth'), the Roman form of homage and worship, consisted in raising the right hand to the lips, kissing it, and then waving it in the direction of the adored object,[3] after which the worshipper turned his body to the right.[4] During the ceremony the head was covered, except when Saturn or Hercules was adored. Plutarch suggests fantastic reasons for exceptional uses in which the worshipper turned from right to left.[5]

But both Greeks and Romans employed the kiss direct in worship. Cicero observes that the lips and beard of the statue of Heracles at Agrigentum were almost worn away by the kisses of the devout.[6] The kiss indirect, or the kiss at a distance, may be described as a natural extension of the direct, capable of development by any people independently. But it is a curious fact that it can be traced from Græco-Roman civilization to that of modern Europe, where, however, it appears to be instinctive in children.

The adoration of the Roman Emperors was influenced by Oriental ceremonial. It consisted in bowing or kneeling, touching the robe, and putting the hand to the lips, or kissing the robe; a variation was the kissing of the feet or knees.[7] It does not seem to have become the fashion before Diocletian.

The kiss of homage in the Middle Ages was so important a part of the ceremony that *osculum* became a synonym for *homagium*.[8] The vassal kissed the lord's feet (rarely his thigh).[9] Afterwards he offered a present for the privilege, a *baise-main*, a term which shows the connexion or confusion with the equally prevalent fashion of kissing the hand of the sovereign. It is said that Rolf the Ganger, the first Duke of Normandy, when receiving the province as a fief from Charles the Simple, kissed the monarch's feet by lifting them to his mouth as he stood erect.[10] When homage was paid in the lord's absence, the vassal kissed the door, lock, or bolt of his castle; this was *baiser l'huis* or *le verrouil*.[11] Mediæval charters make pretence of kissing the king's feet.

6. Death by kissing.—Rabbinical lore includes a unique fancy, explanatory of the death of the righteous. According to this, the death of a favourite of God is the result of a kiss from God (*bi-nᵉshîḳāh*). Such a death was the easiest of all modes, and was reserved for the most pious. Thus died Abraham, Isaac, Jacob, Aaron, Moses, and Miriam.[12] There is a legend that, as St. Monica lay dying, a child kissed her on the breast, and the saint at once passed away. Italian folklore preserves the Hebrew idea in one of its phrases for death: 'addormentarsi nel bacio del Signore.'[13]

7. Kissing sacred objects.—Kissing the image of a god was a recognized rite of adoration among both Greeks and Romans. The early Arabs had the same rite. On leaving and entering the house they kissed the house-gods.[1] In the Eleusinian Mysteries the sacred objects were kissed.[2] The toe of St. Peter's statue is kissed by Roman Catholics. The Muslim kissed the Ka'ba at Mecca. In the wall there is a black stone believed by Muslims to be one of the stones of paradise. It was once white, but has been blackened by the kisses of sinful but believing lips.[3] The Hebrews often lapsed into the idolatrous practice; Hosea speaks of 'kissing calves'; the image of Baal was kissed.[4] Together with kneeling (*q.v.*), the kiss comprises belief and homage. The Hebrews kissed the floor of the Temple,[5] and to this day, in the Hebrew ritual, it is the practice to kiss the *ṣîṣîth* of the *ṭallîth* when putting it on, the *mᵉzūzāh* at the door when entering or leaving, and the Scroll of the Law when about to read or to bless it.[6] It is even customary among Jews, though not obligatory, when a Hebrew book is dropped, to kiss it. *Kissing the Book* is a case, surviving (as a real living ceremony) in the highest civilization, of primitive conceptions of the oath. These were expressed in various forms.[7]

One method of 'charging an oath with supernatural energy is to touch, or to establish some kind of contact with, a holy object on the occasion when the oath is taken.'[8]

The view of Westermarck, that *mana* or *baraka* is thus imparted to the oath, is further developed when the name of a supernatural being is introduced; thus the modern English ceremony retains the words, 'So help me God.' A complementary aspect is supplied by forms whose object is to prevent perjury.

The Angami Nāgas 'place the barrel of a gun, or a spear, between their teeth, signifying by this ceremony that, if they do not act up to their agreement, they are prepared to fall by either of the two weapons.'[9] In Tibetan law-courts 'the great oath' is taken 'by the person placing a holy scripture on his head, and sitting on the reeking hide of an ox and eating a part of the ox's heart.'[10] 'Hindus swear on a copy of the Sanskrit *haribans* [*Harivaṁśa*].'[11]

The European ceremony of kissing the book of the New Testament after taking the oath in a law-court connects in its material form rather with the kiss of reverence, as instanced in the kissing of relics and sacred objects generally. But in essence there is still some of the primitive sense of responsibility by contact, rendered stronger by the invocation of the name of the deity. Derived indirectly from the Græco-Roman ritual kissing of sacred objects and the Hebrew reverence for the Scroll of the Law, it was early developed by the Christians into their characteristic ceremony of oath-taking. Chrysostom writes:

'But do thou, if nothing else, at least reverence the very book thou holdest out to be sworn by, open the gospel thou takest in thy hands to administer the oath, and, hearing what Christ therein saith of oaths, tremble and desist.'[12]

Ingeltrude is represented repeating the words:

'These four Evangelists of Christ our God which I hold in my own hands and kiss with my mouth.'[13]

In the former quotation the act of kissing can only be inferred from the word 'reverence.' The holding of the book is less definite than the Hebrew rite of placing the hands on the scroll when swearing. Even in the Middle Ages an oath was often taken merely by laying the hand on the Missal.[1] The Lombards swore lesser oaths by consecrated weapons, the greater on the Gospels, but it is not certain whether they kissed the book.[2] An oath ratified by contact with a sacred object was a 'corporal oath'; the object was the *halidome*, the equivalent of the Greek ὅρκος, oath and object being identified. No doubt contact by means of the lips was at an early date regarded as more efficacious than contact by means of the hand, and thus the more primitive notion was superimposed upon that of adoration. In Islām the rite is that usual in adoration and does not include the kiss.[3] In modern England a detail to be noted is that the hand holding the book must be ungloved. The book varies according to the creed; a Jew is sworn on the OT; a Roman Catholic on the Douai Testament. The term 'book,' employed with special reference to the oath upon the NT, has been regular in England since the 14th cent. at least.[4]

Among Anglican clergy it is customary to kiss the cross of the stole before putting it on. The Catholic Church enjoins the duty of kissing relics, the Gospels, the Cross, consecrated candles and palms, the hands of the clergy, and the vestments and utensils of the liturgy. It was formerly part of the Western use that the celebrant should kiss the host. He now kisses the corporal. The altar is regarded as typical of Christ, and as such is kissed by the celebrant.[5] In the Greek Church relics are kissed.

The 'kiss of peace' was in mediæval times the subject of a curious simplification of ritual, by which it became, as it were, a material object. In the 12th or 13th cent., for reasons of convenience, the *instrumentum pacis*, or *osculatorium*, was introduced.[6] This was a plaque of metal, ivory, or wood, carved with various designs, and fitted with a handle. It was brought to the altar for the celebrant to kiss, and then to each of the congregation at the rails. This is the pax-board or pax-brede of the museums.[7]

8. Metaphor and myth.—The metaphorical applications of the idea of the kiss are not numerous. In some phrases it expresses a light touch. Generally it implies close contact or absolute reconciliation or acquiescence;[8] to kiss the dust is to be overthrown; to kiss the rod is to submit to chastisement;[9] to kiss the cup is to drink. Philostratus inspired Ben Jonson's image of the loved one leaving a kiss in the cup.[10] A 'butterfly kiss' is a light one.

Folklore developed in interesting ways the connexion between the emotional gesture and the ideas of magic and charms. Relics were kissed to regain health. Conversely, the kiss of a sacred person, a specialized form of his touch, cures the leper, as in the case of St. Martin.[11] Some similar association of thought may attach to the nursery practice of 'kissing the place to make it well'; gamesters used to kiss the cards in order to secure luck with them; an Alpine peasant kisses his hand before receiving a present. Pages in the French Court kissed any article which they were given to carry.[12] A famous instance of symbolism is the kiss bestowed by Brutus on his mother-earth—an application of the kiss of greeting. But in German

folklore to kiss the ground is a synonym for to die.[1] The privilege in English folk-custom known as 'kissing under the mistletoe' is a Christmas festal practice connected by Frazer with the licence of the Saturnalia. It may have originated independently as an expression of festivity. Greek, Latin, and Teutonic mythology employed the motive of unbinding a spell by a kiss—*le fier baiser* of Arthurian romances, which changes a dragon into the maiden who had been enchanted.[2] The Sleeping Beauty awakened by the kiss of the lover is a widely-distributed motive. An analogy, without actual derivation, is to be found in many primitive cases of cancelling a tabu. Thus in Australian ceremony bodily contact, analogous to the kiss, in various forms, removes the tabu between two persons, such as the celebrant and the subject of a rite. An analogy may be seen between Teutonic and early Christian ritual in the connexion drawn out by Grimm between minne-drinking and the kiss. He finds this both in sorcery and in sacrificial rites.[3] Closely parallel to the magical power of the kiss in breaking tabu and restoring to consciousness is the myth-motive in which a kiss produces both forgetfulness and remembrance. This capacity is evidently based on human experience, and is significant in connexion with the practice of the kiss in religion. It brings to one focus the kiss of love and the kiss of adoration. In the psychology of adolescence the kiss produces a forgetfulness of old conditions and awakens the subject to a new life. The kiss appears to have no symbol in art. European children and adolescents express it in writing by a cross, perhaps merely an accidental choice. The Slavic Jews style an insincere kiss as a 'kiss with dots.' Some Rabbis explain that Esau's kiss was insincere (Gn 33[4]), and every letter of the word וישקהו is dotted by the Massoretes.[4]

KISTNA (Skr. *Kṛṣṇa*, 'the dark one').—One of the great rivers of S. India, which, like the Godāvarī (*q.v.*) and Kāverī, to which it is inferior in sanctity, flows nearly across the entire peninsula from W. to E. It rises in the Mahābaleśwar plateau of the W. Ghāṭs, only 40 miles from the Arabian Sea.

At its source is an ancient temple of Śiva, inside which the infant stream pours out of a stone formed in the shape of a cow's mouth (*gaumukhi*). This place, known as Kṛṣṇabāī, 'the lady Kṛṣṇa,' is a favourite resort of pilgrims. Fifteen miles down stream is the old Buddhist town of Wāī, one of the most sacred places in its course, with a group of cave-temples and several later Hindu shrines (*BG* xix. [1885] 610 ff.). Farther on it passes close by the town of Sātāra, Karād, or Karhād, at the junction with the Koyna and Māhulī, where it is joined by the Yennā. In the Bijāpur District, Sangam, at its junction with the Mahāprabhā, possesses a temple of some sanctity, dedicated to Śiva under the title of Saṅgameśvara, 'lord of the sacred meeting of the waters,' the site of an annual religious fair. Thence passing through the dominions of the Nizām of Haidarābād, it reaches the Bay of Bengal in the British Kistna District. Here Bezwāda contains some rock-caves of the Buddhist period and a few ancient Hindu temples.

W. CROOKE.

KIZIL BASH.—Kizil Bash, 'Red Heads,' is the name by which are denoted the members of a sect distributed throughout the whole of Asia Minor. They call themselves 'Alevis; their nickname, which in Persia and Afghanistan was and is given to other peoples also, originates doubtless from the colour of their head-dress. Their total number is estimated at more than a million; they form an important section of the population of the vilayets of Sivas (about 305,000), Erzerum (107,000), Angora, and Mamurete ul-Aziz (Kharput), and in certain districts constitute even the majority. Their language is Turkish or Kurdish. Though reckoned officially as Musalmān Sunnites, in reality they are not such; they practise Islāmism only in a formal way to avoid persecution. When they think they are in safety, they do not attend the mosques, read the Qur'ān, say the prayers, or perform the Muhammadan ablutions. Except in the presence of a Sunnite, their women are not veiled. They drink wine, they do not observe Ramadān, and some of them do not practise circumcision or shave the head and other parts of the body as the Turks do. Moreover, they cherish a profound aversion to the Turks, and regard them as unclean; when they are obliged to entertain them, they even go so far as to pollute the dishes with which they serve them. On the other hand, they show great goodwill in their villages towards the Christians. They have secret beliefs and practices which they reveal only with extreme reluctance, and no one has hitherto been able to penetrate, except very imperfectly, the mystery with which they are surrounded.

Their sect, like some Christian Churches, has a hierarchical organization. They have priests called *dédéhs*, whose dignity is hereditary from father to son, and who are the necessary intermediaries between God and the rest of the community. This sacerdotal caste is subject to a species of bishops. These themselves render obedience to two patriarchs, who are regarded as descendants of 'Alī, and who are invested with a sacrosanct authority. One of these is the Shaikh of Khubyār (about 34 miles to the N.W. of Sivas), a popular place of pilgrimage. It is certain that the Kizil Bash possess a sacred book, probably liturgic in character, but as yet no part of it has been made public.

Three superimposed stratifications in the religion of the Kizil Bash may be distinguished.

(1) There is an old *pagan foundation* going back to the ancient Anatolian beliefs, tinged with Persian Mazdæism, which were practised in the country before its conversion to Christianity. The Kizil Bash regard certain heights or certain rocks as sacred, *e.g.* near Kara Hissar (Taylor, *Journal Royal Geogr. Society*, xxxviii. [1868] 297), and on holidays they sacrifice sheep and fowls on these summits. The trees which grow there—usually pines—are surrounded with superstitious regard, and no one is allowed to carry an axe near them (cf. F. and E. Cumont, *Voyage dans le Pont*, Brussels, 1906, p. 172 ff.). The Kizil Bash, like the ancient Mazdæans, worship streams and especially springs. They also venerate fire; when they build a house, they light a fire with great ceremony, and this must be kept burning as long as the house remains standing. The place of honour is near the hearth, and to spit there is sacrilege. A fire-

altar hewn out in the rock is still the object of devotion at Manasgerd (C. Wilson, *Handbook of Asia Minor*, London, 1895, p. 250). They worship the sun at its rising and setting, and a day in which it does not appear is for them a day of mourning. They also worship the moon.

Everybody in the East accuses the Kizil Bash of giving themselves up to orgies in their nocturnal ceremonies (cf. below), when, the lights out, each man has commerce with a woman taken by chance. That is why the Turks call them, in derision, *terah sonderan*, 'extinguishers of the light.' It is difficult to know what degree of truth there is in this imputation. But it is remarkable that the same promiscuity was, during their feast of 1st January, laid to the reproach of the Paulicians in the 9th cent., who were distributed throughout the same regions as the Kizil Bash of to-day (Manichæan formula of abjuration, in *PG* i. 1469: *μετὰ δὲ τὴν ἑσπερινὴν μέθην ἀποσβεννύουσι τὰ φῶτα, σαρκικῶς τε ἀλλήλοις ἐνασελγαίνουσι, καὶ μεδεμιᾶς ὅλως φειδομένοις φύσεως ἢ συγγενίας ἢ ἡλικίας*). It is possible that those supposed acts of debauchery may be an inheritance from the sacred prostitution of the worship of Mā and Anaïtis. This would also be true of the custom, if it were well attested, of offering a young girl every year to the *dédéhs*, whose son, they say, if one is born, becomes a priest, or whose daughter must remain a virgin and set herself apart for the cult (C^te^ de Cholet, *Arménie, Kurdistan et Mésopotamie*, Paris, 1892, p. 96).

(2) The influence of *Christianity* is evident both in the beliefs and in the rites of the sect. The Kizil Bash teach that God is One in Three Persons, and that the principal incarnation of God, before 'Alī, is Jesus Christ, the Saviour of the world, who intercedes with God for humanity. They are devoted to Mary, who is, they believe, the Mother of God, and who conceived without ceasing to be a virgin. At the same time, they acknowledge the existence of five powers, lower than the Trinity, mediators between the Supreme Being and man, analogous to the *yatīm* of the Nosairis, a kind of archangels which are perhaps derived from the Iranian Amesha Spentas (*q.v.*). Moreover, they assume the existence of twelve ministers of God, who correspond to the twelve apostles and the twelve *naqībs* of the Nosairis. Unlike the Yezidis, they offer no worship to Satan, whom they regard as the irreconcilable adversary of God. Like the Nosairis, they believe that at the end of the ages the spirit of evil will come to fight a final battle against the last incarnation of Jesus. Mazdæan dualism is here combined with Christian ideas.

The Kizil Bash have a ceremony which they celebrate by night on certain holidays—the 10th of the month of Muharram was mentioned to the present writer—and also at irregular intervals, when a *dédéh* visits their villages.

'Accompanying himself with a musical instrument, the priest who officiates sings prayers in honour of 'Alī, Jesus, Moses, and David. . . . The priest has a willow cane which suggests the *barsom* [*q.v.*] of the Avesta. He dips it in water while he says the prayers. The water thus consecrated is afterwards distributed throughout the houses. In the course of the ceremony those who take part make public confession of their sins, after the manner of the early Christians. The priest prescribes various penances, frequently in the form of a fine, in money or in kind. Then they put out the lights and engage in lamentations over the faults of which they have been guilty. When the lights are re-kindled, the priest pronounces the absolution; then he takes some slices of bread and a cup of wine or some analogous liquid, consecrates them solemnly, dips the bread in the wine, and distributes it to those of the company who have obtained absolution. . . . Among the Kurd Kizil Bash a sheep is sacrificed according to a certain rite after the public confession, and portions of it are distributed by the priest along with the bread and the wine. . . . The Kizil Bash celebrate Easter on the same Sunday as the Armenians, and they pay homage to several Christian saints, as, for instance, St. Sergius' (Grenard, in *JA* x. iii. 516).

(3) What the Kizil Bash have borrowed from *Islāmism* affiliates them with the Shī'ites rather than with the Sunnites. They have adopted the legend of 'Alī, whom they regard as an incarnation of God the Father, while Jesus is an incarnation of the Son. Like the Shī'ites, they fast during the first twelve days of Muharram, and bewail the death of Ḥasan and Ḥusain. Some say that they regard Muhammad as the hypostasis of the Spirit, the Paraclete, but the veneration which they show towards the prophet is only formal; in reality they refuse to credit him with any divine inspiration.

To sum up: the religion of the Kizil Bash is in many respects a survival of the ancient paganism of Anatolia, which in the east of the peninsula was deeply marked by the die of Mazdæism (cf. F. Cumont, *Religions orientales dans le paganisme romain*[2], Paris, 1909, p. 213 ff., Eng. tr., Chicago, 1911, p. 143 ff.). The country population of these regions was imperfectly and slowly converted to Christianity, and we know that colonies of Magi dwelt there until at least the end of the 5th cent. (cf. F. Cumont, *Textes et monuments figurés relatifs aux mystères de Mithra*, Brussels, 1895–99, i. 10), and perhaps until the Musalmān conquest. Further, in the 12th cent., Nerses Shnorhali gives interesting details regarding the 'Sons of the Sun,' who worshipped the stars, and who venerated, among trees, the poplar (F. C. Conybeare, *The Key of Truth*, Oxford, 1898, p. 159). In the 8th and 9th centuries it was in the countries inhabited by the Kizil Bash that the dualistic Paulicians (*q.v.*) found their most numerous adherents, and even after their extermination by the Byzantine emperors their teaching probably did not cease to exert an influence there. Finally, the relations of the Kizil Bash with Shī'ism are probably explained by their forced conversion to Islām under the Seljuks, at a time when the Persian influence was powerful, perhaps also by the transportation of Shī'ites of Turkish origin into Kurdistan in the time of the Sulṭāns Salīm I. and Sulaimān I. (16th cent.). It is much to be desired that a copy of the sacred book of the sect should be obtained, or that a transcription should be made at least of the hymns of its service. It would then be possible to clear up the mysteries surrounding this very curious religion which retains numerous disciples even in our own times.

LITERATURE.—R. Oberhummer and H. Zimmerer, *Durch Syrien und Kleinasien*, Berlin, 1899, p. 393 ff., where citations will be found from the more ancient authors; F. Grenard (Consul of France at Sivas) has collected some new and accurate information in *JA* x. iii. [1904] 511–522. The writer of this article has added here some facts gathered by himself among the Kizil Bash of the region of Amazia in 1900.

FRANZ CUMONT.

KNEELING.—Kneeling may be described as a natural reaction to the emotions of self-abasement and supplication. As such, it has been observed among unsophisticated peoples. In a less degree only than prostration, it symbolizes inferiority and dependence, by the abandonment of the erect posture of human active life. According to Tylor,[1] kneeling as a ceremonial posture prevails in the 'middle stages of culture.' The same limitation, however, applies to prostration as still practised in Islām and Hinduism. Both in the middle and in the higher stages kneeling is more or less constantly associated with a third gesture—bowing, a symbolic expression of respect or reverence. It would be quite erroneous to 'derive' ceremonial kneeling from prostration, or bowing from kneeling. But certain forms of the bow, surviving in modern etiquette, include some bending of one or both knees: such are the curtsey, still made by ladies at court, and the bow of ceremony in which one

[1] Art. 'Salutations' in *EBr*[11] xxiv. 94.

foot is moved backward while the knee of the other leg is bent.

Primitive peoples hardly developed kneeling as a ceremonial posture in either of the two spheres in which it obtains—social etiquette and religious ritual. What generally corresponds to kneeling in the latter sphere is squatting on the heels, still the Muslim mode of kneeling and certainly a primitive posture, though originally expressing attention rather than reverence. It is employed largely by the Australian natives in their ceremonies.[1] As the stages of the higher barbarism are reached, kneeling appears, developed from the natural supplicatory posture. In Central Africa it is a tribute paid to rank. When a chief passes, the native drops on his knees and bows his head.

'When two grandees meet, the junior leans forward, bends his knees, and places the palms of his hands on the ground.'[2]

At higher stages prostration is usual among Oriental peoples, except the Chinese, who bow, or kneel and bow, according to the rank. To kings they kneel.[3] It is chiefly in Semitic and Græco-Roman culture that kneeling has been prevalent as a ceremonial posture.

In Greek and Roman civilization much prominence was given to the suppliant and the act of supplication, just as was the case in the Middle Ages with the practice of sanctuary. In both ceremonial customs kneeling, the natural posture of earnest entreaty and self-abandonment, was the constant attitude. Such phrases as 'nixæ genibus' (Plaut. *Rud.* III. iii. 33) and 'genibus minor' (Horace, *Ep.* I. xii. 28) are common in metaphor. It seems that in the Assyrian States not only subjection to kings but worship of gods was expressed by kneeling.[4] In the latter case it may be assumed as certain that the attitude has no essential connexion with prayer, as in the Christian use; the king and the god alike were, it appears, pre-eminently despotic, and court and temple ceremonial had similar forms expressing similar ideas, the chief of which was submission.

Among organized religions Christianity alone has given special significance to the posture of kneeling. During half its history the posture signified penitence; during the rest it signified prayer. At the change (marked by the Reformation) it was, by a curious association of ideas, identified with adoration or idolatry.

The process by which Christianity adopted kneeling as a ceremonial posture is somewhat uncertain in detail. The Hebrews, deriving many elements of their worship from Mesopotamian cults, may be supposed to have adopted kneeling from that source, and as a posture of humility it is found in the OT.[5] The Talmud speaks of bending the knee with the face touching the ground—a still more Oriental gesture,[6] almost identical with prostration. Elijah on Carmel 'put his face between his knees'[7]—a similar posture. Kneeling to Baal[8] may have been a form of prostration. Kneeling in prayer is mentioned in the cases of Solomon, Ezra, and Daniel. At the dedication of the Temple Solomon knelt on his knees with his hands spread up to heaven. Ezra fell upon his knees and spread out his hands unto the Lord. Daniel knelt upon his knees and prayed.[9] The posture in those three cases seems identical with the Christian.

The Jews usually prayed standing, but knelt in prayer on special occasions of solemnity or distress.[1] Hannah stood and prayed.[2] It was the same in the time of Christ; He said, 'When ye stand praying.' In the parable both Pharisee and publican stood to pray.[3] The posture of supplication or homage referred to in Mk 10^{17} and Lk 5^{8} (*προσκύνησις*) seems to be complete prostration. Kneeling in prayer occurs once only in the Gospels, when Christ Himself knelt during the Agony.[4]

The first Christians may be assumed to have, like the Founder, usually stood in prayer, following the practice which was common to both Hebrew and Græco-Roman ritual. The catacomb frescoes represent the *orantes* standing with outstretched arms.[5] But earlier than this, at the period represented by the Acts, kneeling appears to have become a characteristic posture. When Stephen knelt just before his death, after the stoning, no posture of prayer can be assumed.[6] It seems as if the posture were so regular a feature of the faith that it was applied indiscriminately on every occasion by the chroniclers. But there is no doubt that the attitude was a feature of the faith at this time. Peter knelt down and prayed; Paul knelt and prayed with them all; 'we kneeled down on the shore and prayed.'[7] For St. Paul kneeling and praying are synonymous.[8] In view of the catacomb evidence and of that of the next stage, it is clear that there is some prejudice in the evidence of Acts. But clearly there is a presumption in favour of the early adoption of kneeling for some aspect of Christian worship. The facts may perhaps be reconciled in this way: the pioneers of the faith probably emphasized the penitent and suppliant posture (which was familiar both to Jews and to Greeks and Romans) on all possible occasions;[9] but, when the faith attained a secure position, the posture was relegated to its traditional use. The case would thus be a microcosm of the change of attitude shown by Christianity itself as a whole.

By the time of the *Shepherd* of Hermas (the middle of the 2nd cent.) kneeling had become familiar in Christian prayer and worship.[10] The position has been summed up thus for the ante-Nicene period:

'The recognized attitude for prayer, liturgically speaking, was standing, but kneeling was early introduced for penitential, and perhaps ordinary ferial, seasons, and was frequently, though not necessarily always, adopted in private prayer.'[11]

The strange thing is that in neither the pre- nor the post-Pentecostal period has kneeling a penitential aspect. This may possibly have been a special development of the Hebrew solemn use of the posture, as in mourning, or of the Græco-Roman and Mesopotamian use in supplication or homage. However that may be, kneeling has ever since in Roman Catholicism retained a primary connexion with penitence. In private prayer it is still, as it has been since the 2nd cent., usual but not obligatory. In public adoration it is regular, though prostration may be used.

But as the posture for public prayer kneeling has never been regular except in Protestantism. The subject requires some detail. Origen in the 3rd cent. is one of the earliest writers to emphasize the penitential meaning; if forgiveness is required, he says, kneeling is essential.[12] St. Ambrose, in the 4th cent., writes:

[1] See Spencer-Gillen, *passim*.

'The knee is made flexible, by which the offence of the Lord is mitigated, wrath appeased, grace called forth.'[1]

Pseudo-Alcuin has the general explanation:

'By such posture of the body we show forth our humbleness of heart.'[2]

As early as Tertullian's time a distinction was marked; he observes that on Sundays and during Pentecost prayer was not to be said kneeling.[3] The implication that a divergence of use existed is proved by the ruling of the Council of Nicæa, more than a century later:

'Because there are some who kneel on the Lord's Day and on the days of Pentecost, that all things may be uniformly performed in every parish or diocese, it seems good to the Holy Synod that the prayers be by all made to God, standing.'

Standing was the attitude of praise and thanksgiving. Hence standing was obligatory during the psalms, hymns, and Eucharistic prayer. For a similar reason, perhaps, St. Benedict uttered his dying prayer standing, 'erectis in cœlum manibus.'[4] In his lifetime he had instructed his monks to kneel during private prayer, not to stand as when in choir.[5] There was, it is to be assumed, an inner meaning of penitence attaching to private prayer, and some importance here seems to have been given to the Gospel account of Christ's kneeling in solitary prayer. Naturally, public penance made use of the attitude of kneeling. The custom of the early Church is clearly marked by St. Basil, who describes kneeling as the lesser penance (*μετάνοια μικρά*) and prostration as the greater (*μετάνοια μεγάλη*).[6] A posture with such associations was a favourite one for anchorites and ascetics. Some such associations of thought may have inspired Eusebius's observation that the knees of James, 'the Lord's brother,' became callous like a camel's, from continual kneeling.[7]

The Canon Law emphasized still further the distinction between standing and kneeling. The latter was forbidden in public prayer at all the principal festivals. To be degraded into the class of *genuflectentes* or *prostrati*, who were obliged to kneel during public service even on Sundays and in paschal (or pentecostal) time, was a severe punishment.[8] A gradation of posture appears in the two terms quoted, which still obtains in Roman Catholic adoration.

That kneeling is a posture characteristic of prayer, as such, is a principle developed by the Reformation Churches, adoration, on the one hand, and penance, on the other, being disregarded. The 'Declaration on Kneeling' during the Lord's Supper illustrates the avoidance of Roman Catholic adoration. The Presbyterians sat to receive the Communion. The originally threefold use of the attitude was perhaps assisted towards its Protestant simplification or reduction into one for prayer alone by the negative emphasis which it received from contrast with the Roman Catholic idea.

It is also remarkable that the practices of kneeling and genuflexion, or bending of the knee, are relatively modern in their application to ideas of reverence or adoration.[9] Here, no doubt, religious and social ritual reacted upon one another. Genuflexion with one knee was developed in the Middle Ages, clearly showing a connexion with homage. The Carthusians are noteworthy for a traditional objection to kneeling in worship; they bend the knee without touching the ground.[10]

In Roman Catholic ritual the rules governing kneeling are precise. The congregation kneel throughout a Low Mass, except during the reading of the Gospel. At High Mass they kneel or prostrate themselves at the words 'et incarnatus est' and 'verbum caro factum est'—a modern development. When adoring the Blessed Sacrament unveiled, the faithful genuflect with both knees, but with the right knee only when revering it in the tabernacle. In the old bidding prayers, as in the diaconal litanies of the Greek Church, the officiating priest, asking the congregation to pray for some special 'intention,' said, 'Flectamus genua.'[1] In penance and confirmation, and at the coronation of a king or queen, the blessing of a new knight, reconciliation, etc., kneeling is prescribed. The celebrant in the Roman, Greek, and Anglican Churches kneels in adoration, but communicates standing. The Lutheran Church and the Church of England have always prescribed reception of the sacrament kneeling. The Lutherans, however, stand at prayer. The Presbyterians stood at prayer, but in recent times they have adopted kneeling.

In European history the social uses of kneeling are confined to court ceremonial, when subjects salute the monarch, the ritual of homage in mediæval feudalism, and various courtly symbolic fashions, as between gentleman and lady. In feudal times the rule was kneeling on one knee in homage, on two in worship. Social friction has been produced in recent times by insistence on the kneeling attitude in connexion either with religious prejudice or with ideas of military discipline.[2]

The differences in the form of the posture of kneeling are simple. The only uncertainty is with the early Christian forms. Most probably there was in these an element of prostration, as was usual in Oriental forms then and is now, being characteristic also of Islām. The Muslim kneels by sitting on his feet, and in that position can make various grades of prostration of body and head.[3] The words of Seneca, 'inflexo genu adorare,'[4] refer to an Oriental, not Græco-Roman, posture of reverence. The classical *adoratio* was performed standing. The fashion of venerating the Roman Emperor in a posture of prostration, complete or from the knees, was of Persian origin, and its introduction is ascribed to Diocletian. It still obtains in Asiatic courts. Prostration in a more natural form was usual in Greek times for suppliants. Its incomplete form was kneeling. Here Augustine illustrates the natural evolution of the posture, and suggests at the same time the lines of its introduction into Christianity, by identifying kneeling with the suppliant attitude:

'They fix their knees, stretch forth their hands (a gesture of prayer), or even prostrate themselves on the ground.'[5]

LITERATURE.—This is fully given in the article.

A. E. CRAWLEY.

KNOTS.—The symbolical use of the knot and the ceremony of tying and untying are practices of great antiquity and of world-wide distribution. Knots have, among practically all primitive races, a special mystical signification, namely, that as amulets they possess the power of hindering or impeding specific conditions. Generally speaking, the ultimate reason for this is not abstruse: the act of tying a knot implies something 'bound,' and hence the action becomes a spell towards hindering or impeding the actions of other persons or things. Similarly, the act of loosing a knot implies the removal of the impediment caused by the knot, and from this belief are derived the various customs of unloosing knots, unlocking and opening doors and cupboards, setting free

captive animals, etc., at periods when undesirable hindrance of any event is feared. Such customs are instances of imitative or homœopathic magic, and the same principle underlies cases in which the tying of knots has a beneficent influence; a person suffering from disease, *e.g.*, may rid himself of it by tying knots in some object, such as a string or twig. The examples here given from the vast number which exist in literature may best be grouped according to their principal uses.

1. General.—The theory of knots from a scientific point of view was first discussed by J. B. Listing,[1] and later, more exhaustively, by P. G. Tait, who analyzed knots in their various forms according to the number of their crossings.[2] The expression 'knot' enters into several phrases of an obscure nature: thus 'nuts of May' is a corruption of 'knots of May,' from the custom of gathering knots of flowers on May-day. The 'Gordian knot' refers to the famous tradition that Gordius, a peasant called to the throne of Phrygia, in obedience to an oracle of Jupiter, dedicated to that deity his waggon, the yoke of which was tied to the draught pole so that it could not be unloosed; another oracle declared that he who unloosed the knot would become ruler of Asia, and Alexander the Great accomplished the task by cutting the knot with his sword.[3] Among the Romans the augur's wand, or *lituus*, which was used to mark out the sacred region (*templum*) for the observation of birds, had to be made from wood containing no knot.[4] In China the earliest means of communication, other than oral, is stated to have been by knotted cords.[5] Similar to this are the *quipus* of ancient Peru.

'The *quipu* was a cord about two feet long, composed of different-coloured threads tightly twisted together, from which a quantity of smaller threads were suspended in the manner of a fringe. The threads were of different colours, and were tied into knots.' The signification of the cords depended on their colour, their order, the number of knots, and their distance from the main string.[6]

Similar contrivances are found in Hawaii and among various African tribes, as well as in eastern Asia and the Pacific Islands.[7] Among some of the tribes of the southern United States, if a definite time was set for a certain event, count was kept by untying one knot each day; by this means the Pueblo Indians were enabled to make simultaneous revolt against the Spaniards in 1680.[8] The nautical 'knot' is another case in point.

2. Knots in religious ceremony.—In the religious systems of the East the importance of the knot in various ceremonies is well recognized. At the initiation ceremony the sacred girdle with which the Brāhman was invested was wound round the waist three times from left to right and tied with one, three, or five knots;[9] at a later stage in the ceremony the initiator made a threefold knot in the girdle on the north side of the navel and drew this to the south side of it.[10] Girdles with three knots are also worn by the Dervishes in S.W. Asia.[11] In the *naōjot*, or initiation ceremony, of Zoroastrianism, the sacred *kustī*, or girdle, is wound round the waist three times and fastened with two knots, one in front and the other at the back, these knots symbolizing certain religious thoughts (see INITIATION [Parsi]).[12]

In the religious ceremonies of the Assyrians the god Marduk is directed to soothe the last moments of a dying man by knotting a woman's kerchief with seven knots and tying it on his head, hands, and feet. The gods will then receive his dying spirit.[1] Similar ideas may underlie the origin of the phylacteries of the Jews and their practice of binding holy texts round the limbs.[2] The Jewish phylacteries, or 'frontlets,' are small leather boxes in which are strips of parchment with passages from Hebrew Scripture. They are fixed on the forehead and on the back of the right hand. That on the head is attached by having its strap tied at the back of the head into a knot of the shape of a 'daleth.' The strap attached to the hand is formed into a noose by means of a knot of the shape of a 'yod.' These knots, together with the letter 'shin' of the head phylactery, make up the letters of the sacred name 'Shaddai' ('Almighty').[3] In Roman religious ceremonials the Flamen Dialis, the priest of Jupiter, was not allowed to have any knots in his clothing, the ring on his finger was broken, and any one coming to his house in chains had instantly to be loosed.[4] Muslim pilgrims on the journey to Mecca also avoid having knots about their person when in a state of sanctity.[5] The Qur'ān contains a reference (cxiii. 4) to 'those who puff into knots,' and these words are believed to refer to women who tie knots in cords and blow and spit on them for magical purposes. It is even recorded that a Jew once bewitched the prophet Muhammad by tying nine knots on a string; Muhammad fell ill and recovered only when the baleful thing was found and its knots undone by the recitation of certain charms.[6] In Biblical literature there are many references to the ceremony of 'binding,' the signification of the term being similar to that of tying a knot.

3. Knots in relation to love and the marriage ceremony.—The magic of knots and the ceremony of binding and loosing had a particular reference in earlier times to women; in classical times, *e.g.*, the unloosing of the girdle (*q.v.*) was symbolical of the loss of virginity,[7] and by tying three knots on three strings of different colours a maid might seek to draw her lover to her side.[8] Among the Arabs a girl, in order to attract the object of her affections, would tie knots in his whip.[9] The true-love-knot is a symbol of plighted affection; the direct origin of its symbolism is uncertain, but from its form and signification it is possible that Thomas Browne's suggestion[10] of its derivation from the *nodus Herculaneus* and the *caduceus* is correct.

The symbolical use of the knot in the marriage ceremony is widely distributed and dates back to extremely ancient times. Among the Brāhmans, towards the end of the marriage ceremony, the husband advances towards his young wife, who is seated facing the east, and, while reciting *mantras*, he fastens the *tali*—a little gold ornament which all married women wear—round her neck, securing it with three knots; before these knots are tied the father of the bride may refuse his consent, but after they are tied the marriage is indissoluble.[11] A cord

is also tied round the bride's waist,[1] and, when she departs from the house, the verse 'I loosen thee' is said.[2] In the Parsi marriage ceremony, a curtain is held up to screen the bride and groom from each other; under this they grasp each other's right hand, after which another piece of cloth is placed round them so as to encircle them, and the ends of the cloth are tied together by a double knot. In the same way, raw twist is taken and wound round the pair seven times. It is then tied seven times over the joined hands of the couple as well as round the double knot of the ends of the cloth around them.[3] The Bhandāris tie the hands of the wedded pair together with a wisp of *kuśa* grass.[4] The Karans of Bengal believe the essential part of the marriage ceremony to be the laying of the bride's right hand in that of the bridegroom and the tying of their two hands together with a piece of thread spun in a special way.[5] In upper India the clothes of the bride and bridegroom are knotted together as they revolve round the sacred fire.[6]

The greatest development of the symbolism was in classical times. At the Roman marriage ceremony the bride's garments were bound with a girdle made of sheep's wool and tied with a Herculean knot; after the marriage the bride, on proceeding to her husband's house, tied the door-posts with woollen fillets,[7] and later, in the bridal chamber, the Herculean knot was untied by her husband and the girdle removed; over this loosening ceremony Juno Cinxia presided.[8] Further details of the ceremony are given by Festus,[9] who states that the application of the girdle symbolized the binding character of the marriage oath, while its unloosing was for a good omen, so that they might be as fortunate in rearing children as was Hercules, who had seventy offspring. On the other hand, Macrobius,[10] in his description of the *caduceus*, states that this represents the union of a male and female serpent as an offering to Mercury, and that they are united by a Herculean knot, which symbolizes necessity; Athenagoras[11] says that the wand of Mercury is a symbol of the union of Jupiter and Rhea, whom Jupiter, disguised as a dragon, bound to him in the form of a Herculean knot. A. Rossbach[12] suggested that the Herculean knot was associated originally with the god Sancus, and that the latter, as god of light, protected men from illness and witchcraft—apotropæic powers which the knot possessed, as being his symbol. In the opinion of the present writer, the symbolism of its tying was that of the binding character of the ceremony, and its loosing represented the loss of virginity. From a physical standpoint the Herculean knot was difficult to unloose.[13]

A somewhat similar custom prevails among the natives of the East Indian island of Rotti. A cord is fastened round the waist of the bride, and nine knots are tied in it and smeared with wax in order to increase the difficulty of unloosing them; the bride and bridegroom are then secluded, and the latter has to untie the knots with the thumb and forefinger of his left hand. Not until this has been done may the man possess the woman as his wife. Frazer, in recording this case, suggests that the nine knots may refer to the months of pregnancy.[1] Before the wedding procession a Macedonian bride has a girdle tied round her waist with three knots by one of her brothers;[2] and among the Russians, during a marriage ceremony, a net, 'from its affluence of knots,' is thrown over the bride or the bridegroom, and the attendants are girt with pieces of net or girdles, 'for before a wizard can begin to injure them he must undo all the knots in the net, or take off the girdles.'[3]

Not only was the knot important in the consummation of marriage and in the protection of the married couple from witchcraft; it was also a powerful amulet in the hands of a third person in preventing the wedding ceremony or the union of the parties concerned. Thus in the Middle Ages a person could prevent a marriage by tying a knot in a cord or fastening a lock. The cord or lock had then to be thrown into water, and, until the charm was recovered and undone, no real marriage could take place.[4] Such practices were punishable, and in 1705 two persons were condemned to death in Scotland for stealing charmed knots which had been made, with intent to mar the wedded bliss of Spalding of Ashintilly.[5] The tying of these knots was known in Germany as *Nestel knüpfen* and in France as *nouer l'aiguillette*. Those who made or used such spells were, as early as 1208, directed to be excommunicated,[6] and the *Ritual* of Paris of 1630 contains the statement:

'Nous dénonçons pour excommuniés tous magiciens et magiciennes, sorciers et sorcières, devineurs et devineresses, noueurs d'aiguillettes et autres qui par ligatures et sortiléges empêchent l'usage et consummation du saint Mariage.'[7]

There are innumerable examples of this superstition in mediæval literature, and the same idea seems to have been prevalent among the Northern Semites in A.D. 700, since mention is made of persons 'who bend a needle and insert the head in the eye, or set seals on locks and throw them into a deep well or hide them in the ground that a man may be kept away from his wife.'[8]

In Perthshire, in 1793, knots were also tabued at the marriage ceremonies, as is illustrated by the following custom, recorded by the minister of Logierait:

'Immediately before the celebration of the marriage ceremony every knot about the bride and bridegroom (garters, shoe-strings, strings of petticoats, etc.) is carefully loosened. After leaving the church, the whole company walk round it, keeping the church walls always upon the right hand. The bridegroom, however, first retires one way with some young men to tie the knots that were loosened about him, while the young married woman in the same manner retires somewhere else to adjust the disorder of her dress.'[9]

For a similar reason it was a common practice for the bride and bridegroom to have one or both shoes untied during the marriage ceremony.[10] In Syria the bridegroom must have no knots or buttons fastened in his wedding garments; otherwise their magic will deprive him of his marriage rights.[11] Similar beliefs exist among the North African races.[12] A curious belief connected with marriage is that prevalent among the Pidhireanes, a Ruthenian people on the hem of the Carpathians,

where a widow who wishes to remarry unties the knots on her dead husband's grave-clothes;[1] here again the magic is imitative and symbolizes her freedom from her bond.

4. Knots at child-birth.—The symbolism of the knot at birth is obvious, and its use is probably the most widely distributed of all such beliefs. Birth is associated in all countries with the idea of unloosing, and various peoples adopt different charms of a homœopathic character to facilitate delivery. Hence arise such customs as opening doors and windows, undoing hair, girdles, and all knots in the clothing, preventing the husband and other persons from sitting with the legs crossed, setting free captive animals and even school children, etc. A few examples of these customs must suffice.

In ancient India it was a custom to unloose all knots at the time of child-birth,[2] and among the Romans and Greeks such beliefs were common. Thus Ovid states that the pregnant woman is to unbind her hair before praying to the goddess of child-birth,[3] and she must also avoid having knots in her clothing.[4] At the delivery of Alcmene, Eileithyia is represented as having sat cross-legged before the house in order to delay matters.[5] The same superstition as that mentioned by Ovid occurs in Bilāspur, where the woman's hair is never allowed to remain knotted while the child is being born,[6] and unmarried Jewish girls undo their hair if a difficult labour occurs in the house.[7] The prospective mother, among the Kayans of Borneo, must refrain from tying knots;[8] and in Persia, when a birth was imminent, the school-masters were asked to give liberty to the boys, whilst birds in cages were allowed to escape.[9] In Denmark knots had to be undone when a birth was about to occur; and in Smaaland, to render future parturition easy, the bride should untie the straps of her horse's saddle when returning from the church. Here also the bride did not tie her shoe-laces before the wedding, in order that 'she might bear children as easily as she could remove her shoes,' and she would have toothache at the birth of her child if anything were tied over her bridal crown.[10] Among the Hos of Togoland, when a difficult confinement occurs, a magician is called, who declares: 'The child is bound in the womb, that is why she cannot be delivered.' To loose the bonds he binds the hands and feet of the patient with a tough creeper and then, after calling the woman's name, he cuts through the creeper with a knife, saying, 'I cut through to-day thy bonds and thy child's bonds.' The creeper is then cut up into small pieces and put in water, with which the woman is bathed.[11]

Similar superstitious beliefs and customs may be traced in the folklore of ancient and modern India, Java, Sumatra, the Sea and Land Dayaks, Cochin China, Central Australia, Mecklenburg, Voigtland, Transylvania, and even to the present day in Scotland.[12]

5. Knots in the cure of diseases.—Knots were largely employed by the Assyrians in their spells for removing illness; thus, for headache, the head of the sick person must be bound with a bundle of twigs, accompanied by the recitation of magic words, and at eventide the twigs are to be cut off and thrown into the street 'that the sickness of his head may be assuaged.'[1] Another text recommends the use of the hair of a virgin kid, spun and bound with twice seven knots to the head, neck, and limbs of the sufferer.[2] As a charm for ophthalmia, black and white threads or hairs are woven together, with seven and seven knots therein, and during the knotting an incantation is said; the thread of black hair is then to be fastened to the sick eye, and the white one to the sound eye.[3] The Babylonian witches could strangle their victims or seal their mouths, etc., by tying knots in a cord, and by undoing these knots the sufferer could be relieved.[4] Similar customs have been found among the Persians[5] and Arabs[6] in modern times. Pliny, referring to wounds, remarks:

'It is quite surprising how much more speedily wounds will heal if they are bound up and tied with a Hercules' knot; indeed, it is said that, if the girdle which we wear every day is tied with a knot of this description, it will be productive of certain beneficial effects, Hercules having been the first to discover this fact.'[7]

He also states that inguinal tumours could be cured by taking a thread from a web, tying seven or nine knots on it, and then fastening it to the patient's groin, although it was also necessary to name some widow as each knot was tied.[8] Again, to cure swelling of the groins due to ulcers, the patient is directed to insert in the sores three horse hairs tied with as many knots.[9] In 1718 the Parliament of Bordeaux sentenced an individual to be buried alive for spreading desolation through a family by means of knotted cords;[10] and in Scotland,[11] Denmark, and Sweden[12] knotted cords are still in use to protect both men and beasts from illness, the number of knots being usually three or nine. In Russia a skein of red wool is wound about the arms and legs to protect the wearer from fever, and nine skeins tied round a child's neck protect it from scarlatina.[13] One of the most common of such beliefs is that warts may be cured by tying as many knots in a string as one has warts, and to obtain the ultimate cure either the knots are unloosed or the string is thrown away or placed under a stone, when the first person to tread on the stone or pick up the string acquires the warts;[14] or each wart is to be touched by one of the knots.[15] In the days when the belief in the possibility of transferring diseases to inanimate objects was prevalent, knots were made in the branches or twigs of trees; the ceremony, being accompanied by spells, transferred the disease to the tree.[16] For protection against disease the Hos of Togoland tie strings round the different parts of the body.[17] Knots are even believed to be a protection against death itself, and the soul cannot leave the body till they are loosed.[18]

6. Other beliefs in knots as amulets.—Among the Assyrians the knot was used to prevent the spirits of the dead from annoying the living. To attain this end, the following directions are given:

'Spin a variegated and a scarlet thread together, and tie seven knots in it; thou shalt mix together oil of cedar, spittle of the

man, the leavened dough, earth from an old grave, a tortoise's (?) mouth (?), a thorn (?), earth from the roots of the caper, earth of ants; thou shalt sprinkle the knots with this. While thou tiest them, thou shalt repeat this incantation [(and) bind it] on the temples [of the man]. Thus shalt thou tighten it, until the darkening of the white part of the face and the whitening of the dark-coloured part of the face takes place.'[1]

To remove a tabu from a man, directions are given to bind his limbs with a double cord of black and white threads which has been twisted on a spindle; the cord then appears to be cut by the hands of Marduk, who also releases the man from the tabu.[2] Evidently a witch could cast a tabu on a man by tying knots and chanting a spell, for we are told that 'her knot is loosed, her sorcery is brought to naught, and all her charms fill the desert.'[3] The ancient Hindus believed that knots tied in the garments of a traveller would protect him on a dangerous journey;[4] and in classical times spells were removed by knots, for Petronius mentions that, in removing a spell from Encolpius, 'she then took from her bosom a web of twisted threads of various colours and bound it on my neck.'[5] Charms of many coloured threads were tied on the necks of infants to protect them from fascination.[6] The same idea explains the wearing of the sacred thread, or *janeû*, by high-caste Hindus. The knots on it, known as *Brahma-granthi*, or 'the knots of the Creator,' repel evil influences, and Muhammadans on their birthdays tie knots in a cord, which is known as the *sālgirah*, or 'year knot.'[7] To drive away rain, the Mirzāpur natives name twenty-one men blind of an eye (and, therefore, ill-omened), and make twenty-one knots in a cord, and tie it under the eaves of the house.[8] The tying of knots in a string and subsequently unloosing them to raise wind for sailing is a custom common to many fishing people—*e.g.*, Finlanders, Laplanders, Shetlanders, and natives of the Hebrides and Isle of Man.[9] South African natives before starting on a journey will knot a few blades of grass so that the journey may be prosperous,[10] and the knotting of grass in a forest is supposed by Laos hunters to prevent others from being successful there in the pursuit of game.[11] Russians have the belief that knots act as a protective against violent death from weapons, which, as it were, are 'tied' by the knots; and knots also prevent the death of cattle and people by 'binding up' the mouths of wolves and other ravenous animals—a belief which is also current in Bulgaria[12] and Armenia.[13]

CHARMS AND AMULETS. For Egyptian knotted cords (use unknown) see W. M. F. Petrie, *Amulets illustrated by the Egyp. Collection in Univ. Coll., London*, London, 1914, p. 29, and plates xvii.–xix.

WALTER J. DILLING.

KNOWLEDGE.—See EPISTEMOLOGY.

KNOX.—1. Birth and early life.—Neither the place nor the date of John Knox's birth is certain; but Giffordgate, a hamlet contiguous with Haddington, is the site for which most and against which least can be said; and a date between 24 Nov. 1513 and 24 Nov. 1514 (not 1505, as, until recently, was usually supposed) is most probable.

Local tradition in favour of Giffordgate was old in 1785 (G. Barclay, in *Trans. Soc. of Antig.* i. 69; publ. 1852), and is accepted by D. Laing (*Works of Knox*, Edinburgh, 1864, vi. xviii.), A. F. Mitchell (*Scottish Reformation*, do. 1900, p. 79), and D. Hay Fleming (*Original Secession Mag.*, 1889). The ancient *Registre* of Geneva and Knox's contemporary, Archibald Hamilton (*de Confusione Calviniunæ sectæ*, Paris, 1577, p. 64), describe him as a native of Haddington. His designation by Beza (*Icones*, 1580) as 'Giffordiensis,' and the statement by J. Spottiswoode (*Hist. of the Church of Scotland* [published 1655], ed. 1850, ii. 180) that he was born in Gifford, are consistent with the above (Giffordgate being on the Gifford Estate), but are believed by T. McCrie (*Life of John Knox*[6], Edinburgh, 1839) and by S. Kerr of Yester (*Where was Knox born?*) to indicate Gifford village, 4 miles from Haddington, as the real birthplace—a village, however, which appears in no map older than the 17th century. D. Louden (*History of Morham*, London, 1889, pp. 34–51) advocates Morham, within Haddington Constabulary; and it is favoured by P. Hume Brown (*John Knox: A Biography*, London, 1895). In the 14th cent. this parish passed by marriage to the Giffords, and in Knox's time was owned by the Bothwells—which would account best (it is held) for Knox's acknowledgment (Laing, *Works of Knox*, ii. 323) of feudal obligation to that family. But, against this view, the name Morham was never superseded by Gifford.

The two earliest authorities for Knox's birth-year are Peter Young, of Edinburgh, and Theodore Beza, of Geneva—both personal friends of the Reformer. Beza states (*Icones*) that Knox died after reaching the age of 57; but Young's testimony that he died in his 59th year is to be preferred as being contained in a letter (recently recovered) written from Edinburgh expressly in answer to Beza's inquiry. The date 1505 (formerly accepted) rests on Spottiswoode's authority (*Hist. of Church of Scotland*, ii. 180), followed by D. Buchanan (*Life and Death of Knox*, published 1644), who had access to Spottiswoode's then unpublished MS. McCrie found confirmation (perhaps the basis) of Spottiswoode's statement in the recorded entrance of a John Knox into Glasgow University in 1522; but eight John Knoxes were students there in the 16th and 17th centuries.

Knox is stated by Beza to have been a student at St. Andrews under John Major, who was settled there in 1531. His student life must have begun not very long after Patrick Hamilton's martyrdom at St. Andrews in 1528, and the words in Knox's *History* (i. 36), 'when those cruel wolves had devoured their prey, there was none within St. Andrews who began not to enquire wherefore was Patrick Hamilton burnt?' sound like a personal reminiscence. At any rate Knox was probably affected by the martyrdom; and this, along with the teaching of Gavin Logie, who fled from St. Andrews about 1534 on account of Reformed views, and also the oath which graduates had to take against 'Lollardism,' may have led to Knox's non-graduation as *Magister Artium*. On the other hand, Major's influence and Knox's keenly patriotic spirit may have kept him from identifying himself with a cause which, in its earlier stages, came, justly or unjustly, under suspicion of being associated with unpatriotic subservience to England. Knox entered the priesthood at some date prior to 1540; and, up to 1545, there is no evidence of his public support of the Reform cause. In 1543, however, he had received a lively impression of the truth from Friar Thomas William, one of the Regent Arran's evangelical chaplains (D. Calderwood, *History of the Kirk of Scotland*, i. 155 f.); and the seed fructified under the ministry of George Wishart, who came to East Lothian in 1545. Knox, then tutor in Hugh Douglas's family at Longniddry, 'waited on Wishart from the time he came to Lothian,' and attended him in Haddington on the evening before Wishart's midnight arrest. Henceforth Knox was a recognized adherent of the Reformation.

2. Call and ministry at St. Andrews.—The assassination of Beaton in May 1546 was condoned by Knox as a 'godly fact,' justified by the failure of the civil authority to punish the Cardinal's illegal oppression. He had no scruple, therefore, about taking refuge from peril in the Castle of St. Andrews held by the conspirators and other opponents of the Roman Catholic religion. From the Castle congregation, led by John Rough, an evangelical preacher, he accepted a solemn call to the Reformed ministry. From the pulpit of the Parish Church he declared that the evil lives of the clergy (from popes downward), corrupt Roman doctrine, unscriptural enactments, and

blasphemous papal pretensions proved that the Church of Rome was 'not the body of Christ, but the whore of Babylon.' 'A great number openly professed' Reformed doctrine at St. Andrews; and Holy Communion was celebrated for the first time publicly in Scotland according to a Reformed ritual. What had hitherto been only a Protestant movement thus grew into a Reformed Church. Meanwhile, however, partly as a divine judgment (so Knox declared) on account of the evil doings of a portion of the Castle community, the garrison were constrained, in the autumn of 1547, to surrender to the French fleet, and Knox, along with other prisoners, was consigned to the 'torment' of the galleys.

3. Ministry in England.—After eighteen months of toil and tribulation as a galley bondsman, Knox was released through the English Government's intervention. Gratitude to his liberators and the impracticability, then, of effective ministry in Scotland induced him to settle in England, where Archbishop Cranmer and Protector Somerset were accomplishing, under Edward VI., a more real Reformation than that of Henry VIII. In Berwick (1549–51) Knox ministered to a congregation consisting of garrison and citizens, using a Puritan form of service. The Communion office was largely borrowed from Swiss sources, and the practice of kneeling was discontinued as a symbolical endorsement of the Adoration of the Host. During this Berwick ministry he publicly testified against the 'idolatry' of the Mass before the ecclesiastical 'Council of the North,' and vindicated the Puritan position that 'all worshipping invented by the brain of man, without God's express command, is idolatry.' Such action and testimony justify Carlyle's designation of Knox as 'the Chief Priest and Founder' of English Puritanism (*Heroes and Hero-worship*, London, 1872, p. 132). In 1551 he was promoted to Newcastle, and in 1552 he became one of six royal chaplains, who also itinerated on behalf of the Reform cause. He declined the bishopric of Rochester, not owing to any objection to episcopacy in itself, but because he disapproved of 'your prowde prelates' great dominions and charge (impossible by one man to be discharged)' (Laing, v. 518). As a patriotic Scot, moreover, he would be reluctant to undertake responsibilities which might debar him from eventual service to his native land. Partly through Knox's influence, sitting at Communion was favoured by many; and in Edward's Second Prayer Book, while kneeling was retained, the existing rubric was inserted at Knox's instigation (J. Foxe, *Acts and Monuments*, vi. 510; P. Lorimer, *John Knox and the Church of England*, London, 1875, pp. 99–107), declaring that by kneeling no adoration is intended either of the sacramental elements or of Christ's 'natural flesh and blood.' At Edward's death Knox not only took no part in the plot to enthrone Lady Jane Grey, but, as Royal Chaplain, prayed publicly for 'our Sovereign Lady Queen Mary,' and besought God to 'repress the pride of them that would rebel.' When the Queen's policy of persecution, however, became assured, Knox crossed over to Dieppe early in 1554. 'My prayer,' he writes, 'is that I may be restoirit to the battell again' (Laing, iii. 154 f.).

4. Leader and pastor of Protestant exiles on the Continent (1554–59).—Knox's exile was no period of inactivity. He not only accomplished much literary work,[1] and kept himself in constant touch, through correspondence, with reforming friends in Scotland and England, but he also ministered to congregations of fellow-exiles. In Frankfort he became pastor, in March 1554, to an English community of Puritan tendency, using a Service-book of his own based on Calvin's Liturgy. The subsequent arrival, however, of other exiles, who desired the use of Edward VI.'s Second Prayer Book, led to conflicts which issued in Knox's withdrawal and in his settlement, early in 1555, at Geneva, as one of two pastors chosen by the British exiles there. Knox's Genevan ministry continued until Jan. 1559, with two breaks—viz. a nine months' visit to Scotland in 1555–56, and a ten weeks' sojourn, in the winter of 1557–58, at Dieppe, where he organized a French Protestant community of 800 members. His stay at Geneva was the most peaceful and perhaps the happiest period of his ministry. 'The Church of Geneva,' he writes in 1556, 'is the most perfect school of life since the days of the Apostles.' Fellowship with Calvin was a joy and a strength, an education and an incentive. To Geneva, in Sept. 1556, he brought his wife, Marjory Bowes, whom Calvin describes as 'suavissima'; her mother had been a devoted member of Knox's Berwick flock. Mrs. Knox died in Dec. 1560. In Geneva were born his sons Nathanael and Eleazar, who entered Cambridge University after their father's death; the latter became vicar of Clacton Magna in 1587. Among notable members of Knox's Geneva congregation were Miles Coverdale, William Whittingham, and two future prelates, Bentham and Pilkington (afterwards bishops respectively of Lichfield and Durham).

5. First return to Scotland.—The anxiety of the Regent Mary of Guise to secure the marriage of her daughter, Mary Stuart, to the Dauphin of France led her to court the favour of Scottish Protestant nobles, and to adopt a tolerant religious policy which encouraged Knox to visit Scotland in Sept. 1555. In districts where influential laymen gave him support, particularly West Lothian and Midlothian, Forfarshire, Ayrshire, and Strathclyde, he propagated Reformed doctrine and persuaded Protestant leaders to abstain from Mass and to celebrate Holy Communion with a Reformed ritual. Scottish Protestants thus acquired courage and consolidation. Knox even made a bold attempt to win the Regent by a conciliatory letter in which he praises her 'moderation and clemency.' In vain; she treated his elaborate address as a 'pasquil.' The Bishops cited him to trial for heresy at Edinburgh in May 1556, and Knox arrived to meet his accusers; but they received no support from the Regent, and departed from the charge on the ground of some alleged informality. On the very day appointed for his trial Knox preached to a larger congregation than ever before had listened to him. An appeal, however, in midsummer, from his Geneva flock, and the conviction that the Reform cause, strengthened by his visit, might now be better served by his withdrawal for a time to prevent the resumption of persecution, led to his return to Geneva.

6. Final return to Scotland and accomplishment of the Reformation (1559–60).—In Dec. 1557 there was drawn up at Edinburgh, largely through the absent Reformer's stimulating influence, the first Scottish 'Covenant,' an organized Protestant league for defence against religious despotism and for the advancement of the Reform cause. This movement, along with Mary Stuart's marriage to the Dauphin in 1558, and the consequent removal of the Regent's motive for toleration, led to renewed persecution; and the Scottish Reformers, realizing their need of Knox, invited him to return. He arrived at an opportune moment, on 2nd May 1559. Four notable preachers—

[1] This included his *First Blast of the Trumpet against the Monstruous Regiment* [i.e. *Rule*] *of Women*, his *Appellation against the Scottish Hierarchy*, a *Brief Exhortation to England*, and a *magnum opus* on *Predestination*.

Harlaw, Willock, Christison, and Methven—had been cited to Stirling on 10th May to answer the charge of unauthorized and heretical ministrations, in rebellious defiance of the Privy Council's prohibition. For non-appearance they were declared to be outlaws, and the raising of an army of 8000 (partly French) by the Regent provoked the gathering of a Protestant host. A trifling incident precipitated the conflict. On 11th May Knox preached in St. John's Church, Perth, against the 'idolatry' of the Mass. While the congregation were dispersing, a priest began the celebration of what Knox had been denouncing. A lad protested loudly, was struck by the irritated celebrant, and retaliated by throwing a stone which broke an image. It was as if a lighted match had been applied to a heap of combustibles. Wide-spread 'purging' of churches and demolition of monasteries ensued. After temporary truces and fruitless attempts at compromise, the Regent, supported by France, and the Reformers, by England, carried on civil war which terminated only with the Regent's death in June 1560. Knox took a leading part in the conflict as preacher and counsellor. A significant sermon at St. Andrews on the 'Cleansing of the Temple'; another in St. Giles vindicating the Reformers' aim as being not any alteration of authority, but the reformation of religion and suppression of idolatry; an extensive itinerancy for the enlightenment of the people and the establishment of a Reformed ministry in chief centres; an important share in the negotiations which issued in the alliance between the Scottish Reformers and the English Government; a signal service at Stirling after a defeat by the French army, when the depressed spirits of the Reformers were 'wondrously re-erected' by Knox's inspiring assurance that their cause *must* and shall prevail because 'it is the eternal truth of the eternal God'—these are some of the Reformer's contributions to the Reform movement during that critical time (Laing, i. 348, 365, 471, vi. 30, 56, 78). The Regent's dying counsel to both sides was to procure the withdrawal of both the English and the French armies. This was effected; and the settlement of Scottish ecclesiastical affairs was left to the Estates of the realm. The issue was the establishment of Protestantism as the national religion by the Convention (a virtual parliament) of Aug. 1560, so far at least as this was constitutionally possible in the absence of monarch and regent.

To Knox and five colleagues was entrusted the composition of a Confession of Faith; the outcome was the 'Scots Confession,' which held the field until it was superseded by that of Westminster. Inferior in logical precision to its successor, the older Confession is superior in theological breadth and spiritual warmth (see art. CONFESSIONS, vol. iii. p. 872). Knox and his associates drew up a Church polity embodied in the *First Book of Discipline*. It recognizes five classes of office-bearers—superintendent, minister, elder, deacon, and reader. The first office was apparently a tentative arrangement, whose continuance or discontinuance might depend on its effectiveness or otherwise; gradually it disappeared; the readers were a temporary institution until sufficient ministers became available. The Church courts were the Kirk Session, Synod, and General Assembly; the Presbytery was developed after Knox's death. Worship was regulated by his *Book of Common Order*. A school as well as a church was to be established in every parish, and a 'college' in every 'notable town,' at which preparation was to be provided for the University. The *Book of Discipline* anticipated modern legislation by advocating compulsory education. The patrimony of the Church, which, prior to the Reformation, included nearly half the property of the realm, was to be expended on the maintenance of the ministry, the education of the young, and the relief of the poor; but unfortunately, notwithstanding Knox's indignant protest, the Scottish landowners 'greadelie gripped to the possessionis of the Kirk' (Laing, ii. 128), which had to be content with a sixth of her ancient patrimony.

7. Knox and Queen Mary.—The young Queen's return in 1561 and the permission of the otherwise interdicted Mass in the private chapel at Holyrood filled Knox with anxiety. He declared from the pulpit that 'one Messe was more fearful to him then gif ten thousand armed enemyes war . . . in the Realme' (*ib.* 276). His first interview with Mary deepened his solicitude. The chief subject of conversation was the right of subjects to resist their princes, particularly in the religious sphere. 'God commandis subjectis to obey thair Princes,' said Mary; 'think ye that subjectis having power may resist thair Princes?' Knox, long before, had learned from John Major the principle of constitutional monarchy, and he replied: 'Yf Princes exceed thair boundis, and do against that whairfoir they should be obeyed, . . . thei may be resisted.' 'I perceave that my subjectis shall obey you, and not me,' said the Queen. 'My travell,' responded Knox, 'is, that boyth princes and subjectis obey God.' He closed the interview with the loyal prayer that Mary might be 'as blessed within the Commoun-wealth of Scotland as ever Debora was in the Commoun-wealth of Israell'; but he stated to friends his conviction, 'yf thair be not in hir a proud mynd, a crafty witt, and ane indurat hearte against God and his treuth, my judgment faileth me' (*ib.* 277–286). This first encounter fairly exemplifies their relations. Knox in his bearing towards the Queen united on the whole the courtesy of a gentleman with the firm and sometimes stern maintenance of his right as a 'profitable member within the commonwealth' publicly to criticize his sovereign's doings, especially in religious concerns. At their last recorded meeting, in Dec. 1563, when Knox appeared before the Queen and her Council to answer the charge of 'convoking the lieges' without her authority, he uttered the memorable manifesto: 'I am in the place quhair I am demandit of conscience to speik the treuth; and thairfoir I speik. The treuth I speik impung it quhoso list' (*ib.* 408).

8. Knox and the Protestant statesmen.—Amid general agreement between Knox and lay Reformers on the vital question of dethroning the Roman Catholic and establishing a Protestant Church, there was serious disagreement as to important details. The difference consisted chiefly in the familiar divergence between principle and expediency. While Knox was against the toleration of the Mass even in the Queen's private chapel, Moray and Maitland thought this a cheap price to pay for Mary's acquiescence in Protestant supremacy. Knox emphasized the necessity of free Assemblies: 'Take from us the freedom of Assemblies, and you take from us the Evangel.' The Protestant statesmen, especially Maitland, saw in the freedom of convocation and enactment a perilous *imperium in imperio*. Knox demanded the legalizing of the *Book of Discipline* by royal and parliamentary endorsement; the lay leaders of the Reformation resisted the claim alike as an occasion of rupture between Church and landowners and as a dangerous aggrandizement of ecclesiastical wealth and power. There was never much love to lose between Knox and Maitland, but the temporary estrangement between Knox and Moray (1563–65), the immediate occasion of which was the latter's unwillingness to press the Queen formally to recognize the Reformed as the National Church, caused a painful breach between two men

who had regarded each other with esteem and affection. The breach was closed about the time of the Queen's marriage to Darnley, when the statesman (who opposed it) became an exile, and the Reformer the leader of a depressed Church. Common misfortune helped to heal discord.

When Mary's mad marriage with her husband's murderer alienated the national sentiment and led to her enforced abdication, Knox and the Regent Moray co-operated loyally in securing the full establishment of Protestantism, a guarantee against the accession of any non-reformed sovereign, and more adequate maintenance of a Protestant ministry. To Knox Moray's tragic death was not only a great public calamity, but a heavy personal bereavement; and his funeral sermon, from the significant text, 'Blessed are the dead which die in the Lord,' moved a vast congregation to tears (Calderwood, *Hist.* ii. 526).

9. Last years and death.—The eventide of Knox's life was clouded with trouble. Moray's removal strengthened the party which favoured Mary's restoration; and some influential men now seceded to it, including Maitland and Kirkcaldy of Grange. On the other hand, the Regent's party, to which Knox loyally adhered, strained the fidelity of the Reformer and others by 'merciless devouring' of the Church's patrimony and oppressive interference with her liberty. When to these troubles was added in 1570 a stroke of apoplexy, Knox was persuaded to leave Edinburgh for the quieter environment of St. Andrews, where he remained for half a year. He describes himself as there 'lying half-dead,' but he did not cease from preaching.

He had to be 'lifted to the pulpit,' writes James Melville, an eye-witness (*Memoirs*, p. 75), 'where he behoved to lean at his first entry; but ere he had done, he was like to ding that pulpit in blads and flee out of it.'

During his residence in St. Andrews took place that introduction of a modified episcopate into the Reformed Scottish Church which became the fruitful source of discord, despotism, and rebellion. Knox did not protest against episcopacy in itself; but he warned the Church of the abuses to which it might lead, and suggested safeguards against the appointment of unqualified persons and the simoniacal alienation of ecclesiastical property to secular use. In autumn he returned to Edinburgh—to die; but two notable functions he lived to discharge: his sermon after the massacre of St. Bartholomew, when he denounced 'that murderer the king of France' in the white heat of righteous indignation, and his last pulpit service on 9th November, when James Lawson was inducted as his successor, and when Knox with 'weak voice' but fervent heart 'prayed that any gift which *he* had possessed' might be bestowed on his successor '1000 fold' (R. Bannatyne, *Memoriales*, p. 281). A 'last good night' to the elders and deacons of St. Giles; a solemn and affectionate Godspeed to his colleague; farewell interviews and messages, in particular a meeting with Morton whom he supported but did not love, and an assurance of divine mercy to Kirkcaldy whom he loved but opposed; a dying prayer for 'the troubled Kirk'; a dying vision of the 'Delectable Land'; and a last request to his devoted young wife[1] to read the 15th chapter of 1st Corinthians, 'where,' he said, 'I first cast anchor'—these are some of the chief incidents of the Reformer's latest hours (*ib.* p. 288 f.). He was buried in what was then the churchyard of St. Giles, at or near the spot afterwards indicated by his initials between the church and Parliament House. As the remains were laid in the grave, Morton uttered his disinterested witness: 'Here lyeth a man who in his life never feared the face of man' (J. Melville, *Memoirs*, p. 60). This panegyric indicates what in Knox's character most impressed his contemporaries. But beneath this fearlessness towards men was his steadfast faith in God, and in his own call to be God's servant. Knox was intolerant towards Romanists as well as Romanism; but we must remember the great difference between the Roman Church of Scotland in the 16th cent. and in the 20th. He was a stern man when conscience demanded severity; but there was in him a vein of tenderness and sympathy of which life-long conflict did not deprive him. We catch a glimpse of this side of his character in the almost intolerable pain which (as he told the Queen) he felt when constrained to punish his children; in the yearnings of a wounded yet affectionate spirit which are revealed in his letter to Moray at the time of their quarrel; and in the solicitude which he manifested on his deathbed for the salvation of Kirkcaldy, his antagonist but former friend. Knox's unreserved self-dedication—at once patriotic and devout—to the Scottish Reformation contrasts well with the defective patriotism and ignoble self-seeking of some of his fellow-labourers, who reaped spoil from the Church's heritage. His incessant and devoted labours after his final return to Scotland, notwithstanding 'a weak and fragile body,' his courageous maintenance of divine truth, by voice and pen, before high and low, and his heroic faith through which the faith of others was sustained, in the eventual triumph of Protestantism, justify the historian Froude's judgment that 'no grander figure can be found, in the entire history of the Reformation in this island, than that of Knox' (*History of England*, London, 1856–70, x. 455).

[1] Margaret Stewart, daughter of Lord Ochiltree, to whom Knox was married in 1564. The youngest of their three daughters, Elizabeth, became the wife of the celebrated John Welch, minister of Ayr.

KODAS.—See MUṆḌĀS.

KOL, KOLARIAN.—'Kol' and 'Kolarian' are terms applied to a race and a group of languages spoken by people found on the Vindhyan-Kaimūr hill range, which flanks the Ganges valley to the South in N. India. The origin of these names presents many difficult questions. Skr. *kola* means 'a hog,' and, according to some authorities, the tribal designation is a term of contempt applied by the early Hindus to the dark-skinned aborigines. According to Jellinghaus (*ZE* iii. [1871] 326), the word means 'pig-killer'; but it is more probably, like Orāon (*q.v.*), a variant of *horo*, the Muṇḍā term for 'man' (H. H. Risley, *TC*, Calcutta, 1891, ii. 101; E. T. Dalton, *Descript. Ethnology of Bengal*, do. 1872, p. 178). The term Kola used in the *Harivaṁśa* and other Purāṇas (J. Muir, *Orig.*

Skr. Texts, ii.[3] [1874] 422; H. H. Wilson, *Vishṇu Puráṇa*, London, 1864–77, iii. 293) is supposed to be applied to the Karnāṭa or Kanarese people; but it seems more probable that it refers to the N. tribe (R. Caldwell, *Comparative Grammar of Dravidian Languages*[2], London, 1875, Introd. p. 18). The origin of the term Kolarian is more remarkable. F. Wilford tried to show (*Asiatic Researches*, ix. [1809] 92) that 'Colar' was the oldest name of India, this hypothesis being based on a passage in pseudo-Plutarch (*de Fluviis*, iv. 1) which speaks of a nymph Kalauria in connexion with the origin of the Ganges. The use of the term Kolarian to designate this people and their language is due to G. Campbell (*JASBe* xxxv. pt. ii. [1866], supplement, p. 27 f.), and was adopted by Dalton and other ethnologists, but was repudiated by Risley on anthropometric grounds:

'Another theory of the origin of the Dravidians was adopted by Sir William Hunter in the account of the non-Aryan races of India given by him in *The Indian Empire*. According to this view there are two branches of the Dravidians—the Kolarians, speaking dialects allied to Mundāri, and the Dravidians proper, whose languages belong to the Tamil family. The former entered India from the North-East and occupied the northern portion of the Vindhya table-land. There they were conquered and split into fragments by the main body of Dravidians who found their way into the Punjab through the North-Western passes and pressed forward towards the South of India. The basis of this theory is obscure. Its account of the Dravidians seems to rest upon a supposed affinity between the Brāhui dialect of Baluchistan and the languages of Southern India; while the hypothesis of the North-Eastern origin of the Kolarians depends on the fancied recognition of Mongolian characteristics among the people of Chota Nagpur. But in the first place the distinction between Kolarians and Dravidians is purely linguistic, and does not correspond to any differences of physical type. Secondly, it is extremely improbable that a large body of very black and conspicuously long-headed types should have come from the one region of the earth which is peopled exclusively by races with broad heads and yellow complexions. With this we may dismiss the theory which assigns a trans-Himalayan origin to the Dravidians' (*Census Report of India*, 1901, i. 508, *The People of India*, Calcutta, 1905, p. 46 f.).

The question has assumed another form as the result of linguistic researches. The original substratum of the type of languages now known as Mōn-Khmēr is found to have

'covered a wide area, larger than the area covered by many families of languages in India at the present day. Languages with this common substratum are now spoken, not only in the modern Province of Assam, in Burma, Siam, Cambodia and Annam, but also over the whole of Central India as far west as the Berars. It is a far cry from Cochin China to Nimar, and yet, even at the present day, the coincidences between the language of the Kōrkūs [see KŪRKŪS] of the latter District and the Annamese of Cochin China are strikingly obvious to any student of language who turns his attention to them' (G. A. Grierson, *Linguistic Survey of India*, ii. [Calcutta, 1904] p. 2, iv. [1906] 'Muṇḍā and Dravidian Languages,' p. 2 ff.).

Further, many ethnologists are not prepared to admit Risley's doctrine of the uniformity of the brachycephalic type in trans-Himalaya (*JRAI* xlii. [1912] 450 ff.); and the origin of the Muṇḍā-speaking races is now attributed to the arrival of the first of three great invasions of Further India from the eastern uplands of Central Asia. It is improbable that the wide distribution in N. India of languages of the Mōn-Khmēr type could have occurred in any other way than by an emigration of these people from Further India. The identity of physical type between the Kolarians and the Dravidians may be the result of contact metamorphosis and the control of a common environment. The latest authority, A. Baines (*Ethnography* [=*GIAP* ii. 5], Strassburg, 1912, p. 3), thus sums up the question:

'The other race, to which the title of Kōl or Muṇḍā is generally attached, is not known south of the forest Belt, in which it is at the present time concentrated under its distinctive tribal appellations. Formerly, however, it was spread over the whole of the great plains of Upper India, and, according to recent philological discoveries, it is akin, at least in language, to communities now settled on the borders of Assam, and far to the east of the Bay of Bengal. Some investigators, indeed, spread its former habitat over a still wider area. In the east and north-east of India, however, its identity has been obscured, if not obliterated, by the successive immigrations of people of Mongoloidic race from eastern Tibet and the head waters of the great Chinese rivers, whose main streams of migration have sought the sea by the valleys of the Irāwadi, Salwin, and Mekhong. In the Gangetic plain the type is traceable throughout the population, slightly, indeed, along the Jamnā, but more distinctly as the east is approached, and almost everywhere more prevalent as the social position is lower. This graduation is due to miscegenation between the Kōl, who, as far as ethnography is concerned, may be considered the autochthonous inhabitants of these tracts, and a taller and fairer race, which entered India by the passes of the north-west or the plains of Balūchistān.'

KORAN.—See QUR'ĀN.

KOREA.—The Korean Peninsula, very mountainous and well watered, projects from the continent towards Japan. On the north it adjoins the wooded mountains of Manchuria, and the plain of Lyao, which has always been a cause of contention to the Chinese, the hunters of the north-east, the shepherds of the north-west (the Manchus), and the Mongols (or their predecessors); on the south-west side it stretches well into the vicinity of Shantung and Central China; the southern extremity comes close to Tsushima; but the north-eastern coast, on the Sea of Japan, is somewhat inhospitable.

1. **History.**—The history of Korea may be extracted from the above remarks: its neighbours, when more advanced or stronger, have prevailed over it by virtue of their civilization, and have often brought it into subjection by force of arms; at some rare intervals it has lived its own life. Its unity was brought about with difficulty. Its entrance into history was about the time when it was invaded first by Chinese and then by Japanese, while the natives settled down as independent kingdoms, Kokurye in the north-west, Paikchei in the south-west, Sillā in the south-east, Kārāk between the two latter—to say nothing of the tribes of the Yei on the Sea of Japan, and the kingdom of Puye situated in the country which is now Manchuria. At last, through the assistance of China, a union was accomplished in the interest of Sillā (668) and in opposition to Japan. To that southern kingdom succeeded the kingdom of Korye (918), and then that of Chosen (1392); the latter was absorbed by Japan in the year 1910.

2. **Nature-worship.**—Numerous facts indicate that earlier than the Korye dynasty there was a nature-religion whose traces are still visible to-day. Sacrifices to heaven were offered by the kings or the people in Sillā, Paikchei, Kokurye, and Puye, and among the Yei. Under the dynasty of Korye the worship of heaven was celebrated by the king, although he was a vassal of the Emperor; the rites had probably become Chinese, and the place of the ceremony was, as in China, a round knoll. The first sovereigns of the Chosen dynasty kept up these old rites. As early as the reign of Thāi-chong, in 1410, 1411, and 1414, debate had arisen regarding the right of the king of Korea to celebrate a sacrifice which the Chinese rituals reserved for the Emperor. Suppressed, then re-established, the sacrifice to heaven does not reappear after 1457 until 1897, when Korea was independent and known as the Empire of Tāi-hān.

Worship of the sun, moon, and stars existed in Sillā and in Kokurye, and is found again during the Korye dynasty. In the last-mentioned period, and also in that of Chosen, mention is made of

altars dedicated to the stars; at these altars offerings and prayers were burned. In the middle of the 15th cent. these ceremonies, Taoist in character, were suppressed; like the sacrifices to heaven, they did not conform to the strict orthodoxy of Confucianism.

In the kingdom of Sillā, at a period when the Chinese civilization had already penetrated, the sacrifices in connexion with agriculture kept their national character; they took place three times a year—in spring, summer, and autumn.

One of the most important points in the ancient religion was the worship of mountains, rivers, and seas. The *Sām kuk sa keui* gives a list of the holy places of the kingdom of Sillā, classified into three groups, according to their importance. Under the dynasty of Chosen, sacrifices were regularly offered, sometimes at the places consecrated by tradition, sometimes at a mountain- or river-altar (after 1405 the altars had official guardians). The regulations of 1866 include ritual rules along with a kind of sacred geography. In spite of the intolerance of the Confucianists, who have gradually effaced so many traces of the ancient beliefs, this worship has survived. It is very deep-rooted among the people; there is hardly a sacred mountain where some sanctuary is not to be found, dedicated to the spirit of the place or to a Buddha as its substitute. At every important or difficult pass there is a sacred tree, at the foot of which each passer-by lays a pebble; some travellers tear strips from their garments and tie them to the branches; the devout present rice. Similar offerings are made at the fords and at the eddies of the rivers. The great trees, the *miryek* (gigantic statues, perhaps Buddhist in origin, which occur in fairly large numbers), and the posts painted red, with the tops roughly representing a human head, are the objects of a similar devotion.

A last mark of the ancient religion has reference to ritual purity. At the beginning of each year there were general sacrifices of propitiation and purification; these were offered also in time of war; and at such times all rejoicings were forbidden. Practices analogous to that great annual purification may be found in the feudal China of the Cheu and in ancient Japan. In the modern Chinese worship, fasting and the washing of hands which precedes every sacrifice have not so general a significance. The use of purifications and of public prayers on the occasion of calamities, fires, and invasions is often noted even during the period of Korye, under names which recall the Japanese *Ohobarahi*. The people observed a custom of the same nature; each year, on the 15th day of the 6th moon, they went to wash their hair at the river in order to remove all misfortunes; then they gathered together to drink and make merry.

3. Ancestor-worship.—The *Sām kuk sa keui* assigns a remote origin to the worship of the royal ancestors of Sillā.

'Under the king Nām-hai, the second reign, the 3rd year (A.D. 6) in spring, they set up for the first time the temple of Si-cho Hyekkesei; at the four seasons they offered sacrifices to him. His own younger sister, Āro, presided at the sacrifices. King Chi-cheung (500–514), 22nd reign, at Nāi-eul, birthplace of Si-cho, founded a temple in order to offer sacrifice to him. Coming to the 36th reign, king Hyei-kong (765–780) for the first time determined the five temples; he chose king Michu (262–284) as the first ancestor of the Kim family; kings Thāi-chong (654–661) and Mun-mu (661–681), who had pacified Paikchei and Kokurye, and had great merits, were each of them ancestors whose [worship] the successive generations [might] not abolish: with these were grouped his two nearest temples, that made five temples.'

The place of a woman in the ceremonies makes us think of the Imperial Japanese priestesses of Ise and Kamo; and, as in Japan, the guardians of the royal tombs seem to have formed a hereditary class of the population in Sillā and in Kokurye.

The worship of dead kings in Kokurye is thus attested:

'The 3rd year of king Tāi-mu-sin (A.D. 20), the temple of the first ancestor, king Tong-myeng (37–19 B.C.), was built.' The Chinese historians confirm the existence of this worship: 'They have two temples for the spirits; one is called the spirit of Puye, represented by a carved wooden image of a woman; the other is called the spirit of Ko-teung (or, rather, the spirit which rose to the heights); they say he is Si-cho, son of the spirit of Puye. For each temple they have established officials, and send men to guard them. These would be the daughter of the god of the river and Chumong.'

The last phrase, added by the author of the *Sām kuk sa keui*, indicates very precisely that Kokurye adored their first king and his mother; the legend of these two personages, recorded in the *Sām kuk sa keui* and in the inscription of 414 of Kokurye, testifies that Si-cho (Chumong, the king Tong-myeng) and his mother were born in Puye; Si-cho did not die a natural death, but disappeared, rising up to heaven, whence the name Ko-teung.

The worship of the founder of the dynasty is likewise observed in Paikchei and in Kārāk.

Since the 10th cent., at least, the worship of the royal ancestors has been Chinese as regards formulæ and rites; and since the year 988 the Korean rituals have been directly inspired by Chinese rituals. The formalities of ancestor-worship have been extended, in accordance with Chinese principles, to the worship of all spirits. Generally a wooden tablet is inscribed with the name of the spirit; the tablet represents him or acts as a support for him; for the ceremony it is set up on a throne. The name of the sacrifice varies: *chei* and *sa* are applied to the worship of the spirits of nature, the first term referring to the earthly, and the second to the heavenly, spirits; *hyāng* is reserved for the manes; *keui* is a requisition or a proclamation made to the spirits; in the worship of Confucius the expressions *hyāng* and *sek tyen* are found. Some of the sacrifices are offered at a fixed time—*e.g.*, at new moon and full moon, at each season, or in spring and in autumn, according to the diversity of spirits; others take place when special events call for them. The king is sacrificer by right, and officiates in person or by his representatives. The principal sacrificer is assisted by various acolytes, masters of ceremonies, invocators, and others; these are merely assistants, not priests. There is no specially constituted priesthood.

The essential elements of the sacrifice are the offering of incense, cloth, wine, and different kinds of food, and the reading of a prayer; at the great sacrifices, musicians chant hymns and dancers perform evolutions at different points in the ceremony. A consecrated cup is handed to the principal sacrificer, who empties it; a part of the consecrated food is then handed to him, which he receives, and, after the ceremony, consumes. The rest of the offering, along with the text of the prayer, is interred in a trench dug for the purpose. The text of the prayer, and the quantity and nature of the offering, vary according to circumstances.

The offerings placed before each tablet for the sacrifice of the proclamation to the gods of the harvests were: two bamboo baskets, covered (dried stag-flesh, chestnuts); two wooden bowls, covered (salted stag-flesh, pickled vegetables); two copper plates, rectangular, covered (rice, sorghum); two wooden plates, round, covered (two kinds of millet); a wooden tray (pork fat); a bamboo basket, covered (cloth); two wax tapers, one perfume-burner, one cup for libations; two bowls of plain wood (pure water, sweet wine); and two pitchers of carved wood (pure water, clarified wine).

Of the places where the official worship is celebrated, some—*myo, tyen, sa*—are covered buildings, separated by courts, and contained within an enclosing wall; and these buildings, more or less extensive and sumptuous, are consecrated to the worship of the manes. The others, *tān*, are altars in the open air, formed of a levelled surface which is raised above the surrounding ground and is

reached by steps; these are encompassed by one or two enclosing walls, square or rectangular in form, often rather low, and built of stone; the altar and the walls are orientated. In the middle of each of the walls is an opening which serves as a passage; it is adorned with the Korean wooden gate, called *hong sāl mun*. The altars are employed for the most part for the worship of the spirits of nature. Several other temples, called *kung* or *myo*, are dedicated to different members of the royal family, heirs to the throne, wives of the second rank, and so on. At death-anniversaries and at several feasts, worship is celebrated at the tombs of the kings and other members of the royal family. The tombs of the kings and queens, *sān reung*, 47 or 48 in number, are situated mostly in the neighbourhood of Se-ul; the tombs of the second and third class, *uen* and *mo*, number more than 10. There are also temples consecrated to Confucius and to various celebrated men and benefactors of the country.

Principal temples and altars.—*Chong myo*, at Se-ul, temple of the royal ancestors of Chosen; *Yeng-heui tyen*, at Se-ul, where the portraits of several kings are honoured; *Kyeng-mo kung*, at Se-ul, built in 1764 for the manes of the crown-prince Chāng-hen (Sa-to); *Hām-heung pon kung*, at Hām-heung, an ancient habitation of Thāi-cho, who founded the Chosen dynasty; *Sung-in tyen*, at Phyeng-yāng, in honour of the legendary Keui-cha, founder (A.D. 1122) of the second kingdom of Chosen; *Sung-tek tyen*, at Kyeng-chu, dedicated to the first king of Sillā; *Mun-sen oāng myo*, temple of Confucius at Se-ul; *Koān oāng myo*, at Se-ul, temples of the god of war who fought with the Korean army against the Japanese in 1592 and 1597; *Sen-mu sa*, at Se-ul, in honour of two Chinese generals who fought for Korea in that war; *Mu-ryel sa*, at Phyeng-yāng, dedicated to several Chinese mandarins who took part in the war against the Japanese (1592–98); *Chhung-mīn sa*, at Sun-thyen, where Ri Sun-sin is honoured, the great Korean admiral who so often conquered the Japanese; *Tāi-po tān*, at Se-ul, an altar dedicated to three Ming Emperors—Thai-tsu, Shen-tsung, who rescued Korea in 1592–98, and Yi-tsung, the last of the dynasty; and *Sā-chik tān*, at Se-ul, altar of the gods of the harvests.

In theory ancestor-worship exists in every family, just as in the royal family: the eldest son inherits the sacrifices and presents offerings to his father, his grandfather, and great-grandfather, as well as to their wives, *i.e.* to one, two, or three generations of ancestors in the male line; the more remote ancestors have neither tablets nor special offerings. The ceremonies take place at the same periods and in connexion with the same events as those of the worship of the royal ancestors, and may be performed in the principal room of the house, in a room or chapel set apart for this purpose, or near the tombs.

For the sacrifice presented by a man of the people (*i.e.* not an official) to his father and mother, the offerings are by right the following: a bowl of vegetables, a plate of fruits, a bowl of dried meat and of salted meat, a bowl of roasted liver, two bowls of cooked rice, two bowls of broth, a spoon and chopsticks for two persons, and six cups (of wine).

In practice the aristocracy of the *ryāng-pān* and the demi-aristocracy of the *chung-in* seem to be the only people who celebrate this private worship. It is regulated by the ritual of Chu Hi and by many Korean commentaries, but it is not mentioned, even in a native form, earlier than 1015.

There are many buildings, more or less important, bearing the name of *sa*, *se-uen*, or *myo*, which belong neither to the official nor to the domestic worship. They are dedicated to celebrated men, Korean or Chinese, philosophers, officials, and soldiers, distinguished by their loyalty, their virtues, and the loftiness of their teaching. The little work entitled *Cho tu rok* mentions no fewer than 383 outside of Se-ul—*i.e.*, on an average, more than one for each district. In some of the chapels not more than one personage is adored, in others half a dozen or more; some men receive sacrifices only in one locality, while the names of others are found in all the provinces, or in several districts of each province. If the terms were taken in their exact sense, the *sa* and the *myo* would be essentially the places of worship; in the *se-uen*, the principal part would be the *kāng tāng*, where the disciples gather together to read and comment upon the works of their master, and to discuss and expound his teaching; as a matter of fact, the three expressions are not kept distinct. These chapels, built by the piety of descendants, disciples, and adorers in order to honour the memory of a respected master, received from their founders gifts of rice-plantations and slaves; and often the king bestowed similar benefits on them, exempted them from taxation, or gave them a tablet bearing characters written by his hand.

There is no doubt that the new international conditions of Korea will modify the religious customs.

4. **Buddhism.**—The formalities of Buddhism in Korea do not differ essentially from those in China, whence it has penetrated into the peninsula. The bonze Sun-to, carrying images and sacred texts, was sent to Kokurye by the king of Tshin in A.D. 372; in 384 the bonze Marananda coming from Tsin went to Paikchei; fifty years later some bonzes from Kokurye entered Sillā, which practised the Buddhist precepts in 528. Before long it was forbidden in that kingdom to kill any living thing; many people became monks and gave their goods to the monasteries; some kings took the bonze's robe; and in 551 the dignity of patriarch of the kingdom was created. Under the Korye dynasty Buddhism shone with incomparable radiance; the *kouk sa*, preceptor of the kingdom, was often possessed of great power, while the bonzes, fortified in their monasteries, and owners of numerous slaves and extensive domains, intrigued, plotted, and strove by force of arms against the ministers who displeased them. The dynasty of Chosen, however, treated the monks mainly with distrust; the *chong*, Buddhist Orders or sects, were, by decree, reduced to the number of two (1419), and then abolished (1512). The monastic profession was surrounded by many hindrances (1469); the monasteries of Se-ul were destroyed, and it was forbidden to build others; the bonzes were prohibited from entering the capital and were ranked among the lowest castes. These persecuting laws have been suppressed since the Japanese domination.

5. **Confucianism.**—The accession of the dynasty of Chosen had been, in fact, a reaction against the bonzes and against the Mongols. In opposition to that twofold tyranny, the nobles had become Confucian *literati*. In spite of the encouragement given by several of the first kings of Korye, the teaching of the Chinese sage, scarcely approved of in Sillā, had failed to find more adherents later on, and in the middle of the 13th cent. Ān Yu complained that he saw the temple of Confucius in ruins and the Great School without pupils. After the fall of the Sung in China, many Confucian books were introduced, and *literati* came into the country. This was the beginning of a Confucian renaissance, of which the great names are those of Ri Saik and Cheng Mong-chu (second half of the 14th cent.). The triumph of the *literati* in Korea followed the fall of the Mongols and the accession of the Ming at Peking. The first kings of Chosen, in particular Thāi-chong (1400–1418) and Sei-chong (1418–1450), organized their kingdom according to the principles of the School, revived the competitive examinations and the rules for the conferment of offices, and surrounded themselves with *literati*, whom, however, they knew how to keep in subjection. In the following century, however, the Confucianists grouped in the official provincial schools, the temples, and colleges around renowned masters, communicating from town to town, and represented at Se-ul by the *literati* of the temple of Confucius and often by the highest officials, spoke

out to the court and to the kings. Two princes resisted and were deposed; the others had usually to submit to a strict puritanism founded upon the classics, and to take part in the persecution of all dissenters, Buddhist and others. It was the reign of Chinese rituals; but the *literati* were not of one mind about the interpretation of the texts. They split up into parties, and fought for power; hence arose exiles, massacres, and violation of tombs; all parties at certain times showed equal ferocity, especially in the 16th and 17th centuries, before and after the invasion of the Japanese and that of the Manchus. Among the great sages of that period mention must be made of Ri Theŭ-kyei, Seng U-kyei, and Ri Ryul-kok, who kept themselves apart from the factions, and He Mok and Song Si-ryel, whose partisans stained the land with blood. Since the 18th cent. the Confucian philosophy has continued to be studied, and the rites have been practised, with milder feelings.

6. Christianity.—Christianity was introduced from Peking in 1784 by some members of the annual embassy; the priests were at first Chinese. The first European missionary who made his way into Korea (1836) was M. Maubant. In 1866 there were in Se-ul and in the provinces twelve missionaries and ten thousand converts, but the massacres decreed in that year almost annihilated the Korean Church. Since 1883, in consequence of the treaties with the European powers, it has been possible to establish all the religious missions openly in the land.

LITERATURE.—I. L. Bishop, *Korea and her Neighbours*, London, 1898; M. Courant, *Bibliographie coréenne*, 3 vols. and supplement, Paris, 1894–1901, 'Sommaire et historique des cultes coréens,' *T'oung pao*, II. xiv. (Leyden, 1900) 295–326, and *Korea* (Madrolle's Handbooks), Paris and London, 1912; J. S. Gale, *Korean Beliefs*, Yokohama, 1897, and *Korean Folktales*, London, 1913; W. E. Griffis, *Corea, the Hermit Nation*[8], New York, 1907; H. B. Hulbert, *History of Korea*, Seoul, 1905; H. G. Underwood, *The Call of Korea*, New York, 1908.

KOURETES AND KORYBANTES.—1. Kouretes.

—The nature and functions of the Kouretes are in great part deducible from a right understanding of their name. We must, in all probability, distinguish between *κούρητες* and *κουρῆτες*, which apparently come from entirely different bases.

Κούρης, 'young man, warrior' (*e.g.*, *Il.* xix. 193, 248), is probably to be connected with Homeric *κοῦρος*, *κούρη*, 'youth, maiden,' Doric *κῶρος*, *κώρᾱ*, which, as shown by the Arcadian form *κόρϝᾱ*, 'maiden,' are for **kor-vos*, **kor-vā*, and are to be connected with the base **kere-*, 'to grow,' which appears, among many other words, in Lat. *creo*, 'I create' (H. Osthoff, *Etymolog. Parerga*, Leipzig, 1901, i. 37; E. Boisacq, *Dict. étymol. de la langue grecque*, Heidelberg, 1907 ff., p. 497). It means properly 'adolescent.' Κουρῆτες (Cretan *κωρήτας*), on the other hand, the subject of the present art., may represent an original **gor-s-étes*, and thus be connected with Gr. *κουρά*, 'shearing, tonsure,' and with *κείρω* (**ger-s-yō*), 'I shear, cut.' The Greek lexicographers confused the two bases, and connected *κοῦρος*, *κούρη* with *κουρά*, as in the *Etymologicum Magnum*, *s.v.* *κουρόσυνα*: *κοῦρος . . . λέγεται δὲ καὶ ὁ ξυρῶν αὐτοῦ τὸ γένειον*; *Etymologicum Gudianum*, *s.v.* *κούρη*: *κόρη καὶ Ἰωνικῶς κούρη . . . ἢ κειρομένη ἔτι.* On the other hand, both lexicons, as well as Hesychius, rightly distinguish between *κούρητες* and *κουρῆτες*.

The *κουρῆτες*, then, may be regarded as meaning those who had undergone some form of tonsure, and this tonsure was one of, and perhaps among the Greeks the most important among, the rites of puberty-initiation. Hair among most primitive people is sacred because regarded as a source and vehicle of life (cf. art. HAIR AND NAILS, vol. vi. pp. 474–477). The sprouting of the beard is a mark of virility attained; and, as puberty both for man and for woman has significance only in relation to marriage, Greek custom enacted that a young man should offer his beard and a maiden her locks before entering on marriage. Our earliest definite evidence for hair-shearing as a rite preliminary to marriage is in the *Hippolytos* of Euripides (1425 ff.). Artemis says to Hippolytos:

> Τιμὰς μεγίστας ἐν πόλει Τροζηνίᾳ
> δώσω· κόραι γὰρ ἄζυγες γάμων πάρος
> κόμας κέρουνται σοι.

And Lucian (*de Syr. Dea*, 60), quoting the custom of Troezen, says that it was the same at Hierapolis in Syria.

'The young men offer the firstfruits of their beards (*τῶν γενείων ἀπάρχονται*), and they then let down the locks of the maidens, which have been sacred from their birth. They then cut these off in the sanctuary and place them in vessels, some of silver, and many of gold.' Lucian notes that the name of the dedicator was often inscribed, and adds: 'I did this myself when I was still a youth, and my lock of hair and my name still remain in the sanctuary.'

The Kouretes, then, we may conjecture, were the mythological projection of youths who had undergone puberty-initiation. The custom of hair-shearing survived in the ceremony of *κουρεῶτις*, which gave its name to the third day of the Apatouria at Athens, on which the youths and maidens were enrolled on the phratry-lists, and the children's hair was shorn and dedicated to Artemis.

Strabo devotes most of the 10th book of his *Geography* to the discussion of the Kouretes. What puzzled him was that he knew of two sorts of Kouretes—one sort real young men living and giving their name to tribes living in Eubœa, Ætolia, and Acarnania; the other sort a kind of magical priest, a semi-mythical person attendant on the gods, and akin, according to him, to other mythical ministrants—like Satyrs, Seilenoi, and Tityroi—to Korybantes, Kabeiroi, Idæan Daktyls, and Telchines. The confusion that seems hopeless to Strabo is cleared up for us by comparative anthropology. Two principles necessarily hidden from Strabo serve to unravel the tangle. First, we know now that social institutions tend to 'project' mythological figures. Actual men dancing in animal skins for ritual purposes beget the notion of mythical figures half-men, half-animal, *e.g.* Satyrs. Actual young initiates, or *kouretes*, tend to project mythological idealized Kouretes. The process is marked by the capital letter. The second principle is even more important. Tribal initiation ceremonies, once their purport is obscured, tend to become the mysteries of secret societies. Privileges once open to all at puberty are confined to the few willing to purchase them either by actual payment to already existing members or by submission to particular tests. The initiate, the *koures*, develops into the professional medicine-man.

All over Greece in primitive days there were presumably Kouretes, warriors who had shorn their hair at puberty, but in Krete only do we find the Kouretes as a special sect of medicine-men or embryo priests. The chorus in the *Hypsipyle* of Euripides (frag. iii. 24) tell how Europa landed on holy Krete, rearer of Zeus, 'nurse of the Kouretes,' and the Bacchants sing (Eur. *Bach.* 119):

> ὦ θαλάμευμα Κουρή-
> των ζαθέου τε Κρήτας
> Διογενέτορες ἔναυλοι.

In Krete, it would seem, was not only the sacred birth-place of Zeus, but the marriage-chamber of the Kouretes. Here, though the Kouretes are half-mythologized, their primary function as marriageable initiates is still remembered, and in the light of this function we can understand the characteristic myth in which they appear as attendants of the Mother (Rhea) and rearers and

protectors of the holy child (Zeus), as *παιδοτρόφοι* and *φύλακες*.

'In the Kretan discourses the Kouretes are called the nurses and guardians of Zeus' (Strabo, x. 468).

Krete, then, was by common consent the birthplace of the Kouretes, and, wherever Kretan civilization spread, the specialized Kouretes are apt to be found. Their particular geographical distribution is matter of the general history of the spread of Kretan civilization, and does not here concern us.

The great central worship of Krete was the worship of the Mother-goddess. In the bridal-chamber (*θαλάμευμα*) of Krete the young men, before they might win their earthly brides, were initiated to the Mountain-Mother, and became symbolically her consorts or husbands; by this ceremony her fertility was promoted and theirs safeguarded. In natural sequence these potential fathers became the guardians of the Mother's child, re-born each year, on whose re-birth the fertility of nature and man alike depended. This marriage of the initiate with the Queen or Mother underlies all the Kretan and Asia Minor mysteries. On an Orphic gold tablet the mystic avows *Δεσποίνας δὲ ὑπὸ κόλπου ἔδυν χθονίας βασιλείας*, and one formulary of the mysteries of Dea was *ὑπὸ τὸν παστὸν ὑπέδυν*, where the *παστός* corresponds exactly to the marriage-chamber (*θαλάμευμα*) of the Kretan Kouretes.

The functions of the *koures* in the secondary and derivative sense as medicine-man, a member of a secret society, were not confined, any more than were those of the young tribal initiate, to that of marriage. It was the multiplicity of these functions that puzzled Strabo. He finds that the Kouretes are magicians, prophets, and armed dancers, as well as child-rearers, and always half-dæmonic. These manifold functions are natural enough if we regard the Kouretes as a blend of medicine-man and culture-hero. The medicine-man is always half-dæmonic, and often dressed up as a bogey; he is always a seer and a healer, always charged with magical power, and it is interesting to find that Epimenides, the great magician-healer of Krete who was summoned to Athens to purify the city, was hailed as the 'New Koures' (Κουρής, not Κοῦρος, as in the printed edd.). He was a man of Phaistos, according to Plutarch (*Vita Sol.* xii.), 'an adept in religious matters dealing with the lore of orgiastic and initiatory rites,' and his life, with its magical sleep in the Diktæan cave and its dream-taught lore, reads like the tale of the initiation of a savage medicine-man.

Diodorus brings the Kouretes before us as culture-heroes, as the projections, half-historical, half-mythological, of man's primitive energies and discoveries. They dwelt, he tells us, on mountains and in wooded places and glens where there was natural shelter. They were distinguished by their ingenuity in inventing things for the common good. They first taught men to collect four-footed beasts in flocks, to tame wild animals, the art of bee-keeping, how to hunt and shoot, and they

'taught men how to live together in societies, and were the originators of harmony and a certain good order. They also discovered swords and helmets and armed dances, and by means of those they made a great din and deceived Kronos' (v. 65).

Following Diodorus, modern mythologists have always explained the characteristic clashing of arms by the Kouretes as part of the tendance of the holy child. As such it appears in the reliefs and on the various coins where the birth is represented. The Mother and child, or sometimes the child only, are figured in the centre, and above them the Kouretes clash their shields. Rendel Harris has shown that the shield- or, rather, cymbal-clashing was connected with the child's sacred *food*, as much as or more than with the child. 'Butter and honey shall he eat.' His nursing mothers (*τροφοί*) are Amalthea ('she of the milk') and Melissa, the honey-bee. It was 'a rude music meant to call the swarming bees to a new hive' (*Boanerges*, p. 350). It finds its counterpart in the 'noise of tin pans and kettles which may be heard in the neighbourhood of any cottage in the country when the bees are swarming.' Virgil remembers the connexion between bees and the cymbals of the Mother. When the bees swarm, he says, strew bruised balm-leaves and honey-wort,

'Tinnitusque cie, et Matris quate cymbala circum' (*Georg.* iv. 64),

and a little later he definitely connects the bees and the Kouretes, speaking of the bees as

'Curetum sonitus crepitantiaque aera secutae' (*ib.* 151).

It is important to note that on our earliest monument representing the Kouretes—one of the votive bronze shields, found actually in the sacred cave on Mt. Ida and dating about the 8th cent. B.C.—the Kouretes are clashing not shields but cymbals or a sort of gong.

Though their aspect as culture-heroes was of great importance, the central function of the Kouretes remained that of husbands and potential fathers. On the symbolic performance in ritual of this function depended the fertility and, in general, the luck or fate of the whole community. Of this, happily, we are certain, owing to the discovery of a priceless monument, the Hymn of the Kouretes, recently found at Palaikastro in Eastern Krete. The Hymn dates from about the 4th cent. A.D., but it embodies a much older original. It opens with an invocation to the 'Kouros most great,' the mythical projection of the band of *kouroi*. He is addressed as 'Kronian,' as 'Lord of all that is wet and gleaming' (*παγκρατὲς γάνους*), *i.e.* lord of moisture and of life begotten and nurtured by moisture. Moreover—an all-important point—he is bidden to come to Dikte 'for the year' (*ἐς ἐνιαυτόν*). The birth and nurture of the holy child are then recounted—a birth which implied to the ears of the initiated a sacred ritual marriage. The Hymn then passes to the consequences of the holy birth. Because the child is annually born, the Seasons (Horæ) began to be fruitful year by year; the cause of the Seasons, their order and way (Dikē), is inaugurated, never again to be disturbed, and in virtue of this birth there results fertility for man and beast, for flocks and herds and bee-hives, for cities and seafaring ships, and finally, by virtue of this goodly rite (*θέμιν*) of initiation, fertility for the newly initiated citizens (*κές ν[εοὺς πολ]είτας*). For all this the worshippers and their god are bidden in primitive fashion to 'leap' (*θόρε*). The Kouretes stand then as salient examples of two fundamental principles in primitive Greek religions. (1) Mythological figures are the projection of (*a*) social structure, and (*b*) human activities. The Kouretes reflect the matrilinear social structure, which centres in the Mother and Child, with accessory consort or consorts. Their religion was obscured and all but effaced by the later patriarchal system in which the Father dominates the Mother, and in which tribal initiation at puberty has ceased to be prominent; the human energies expressed by the Kouretes are those of fighting and fatherhood combined with early food-producing activities—the tending of flocks and herds and bees. (2) Primitive ritual is always magical in character; *i.e.*, the worshipper *does* what he wants done, his rites are those of magical induction; he marries that the land may be fertile, he tends symbolically a holy child that his own children may be nurtured.

Then, as the religious instinct develops, he projects a dæmon leader—a Greatest Kouros, to whom he hands over the functions which he himself performed.

2. Korybantes.—The Korybantes are but a specialized form of one function of the Kouretes; they are the embodiments or projections of the orgiastic ritual-dance. Their name is of interest; it means 'peak.' Thus the Macedonian form of *koryphe*, 'mountain-peak,' is *korybe*, and is probably akin to *kurbasia*, a peaked head-dress worn by, *e.g.*, the Persian king and the Roman Salii, figures near akin to the Kouretes. The Korybantes, like the Kouretes, had initiation-mysteries which seem to have emphasized death and burial rather than marriage and birth; but it must be borne in mind that death and burial rites, followed by resurrection, are equally effective 'medicine' for fertility with rites of marriage and birth. The Peak-Men were naturally, like the Kouretes, satellites of the Mountain-Mother, and in her honour celebrated wild mountain dances (ὀρειβάσια). Some said that they were the first men sprung from the Earth in the form of bees. Their worship was confused with that of the Kabeiroi, and they were at home in Phrygia rather than in Krete. To Plato the Korybantic dances are the stock instance of orgiastic κάθαρσις (*Legg.* 790 D: τὰ τῶν Κορυβάντων λάμματα). This κάθαρσις by dancing included for the ancient Kouretes and Korybantes, as for the modern savage, two elements apparently contrasted, but in reality closely inter-connected—the expulsion of evil, *i.e.* barrenness, sickness, madness, and the induction of good, *i.e.* fertility, health, growth, and sanity. To-day in French Guinea, while some of the natives sow seed, a man armed with a musket dances, and the intent of this is explained as twofold: for exorcizing the spirits and causing the grain to sprout; and in West Africa at sowing time half of the people go out armed for battle, the other half carry only farm tools.

LITERATURE.—For literary and monumental evidence see Roscher, *s.v.* 'Kureten,' Daremberg-Saglio, *s.v.* 'Curetes,' and O. Gruppe, *Griech. Mythol. und Religionsgesch.*, Munich, 1906, Index, *s.v.* 'Kureten' and 'Korybantes.' For the Palaikastro Hymn of the Kouretes see three artt. in *BSA* xv. [1908–09] 309–365, by R. C. Bosanquet, Gilbert Murray, and J. E. Harrison, discussing respectively the finding of the Hymn, the editing of the text, and its religious significance. For the Kouretes as initiates and culture-heroes see J. E. Harrison, *Themis*, Cambridge, 1912, pp. 6 ff., 51 ff.; for their relation to matrilinear culture, *ib.* p. 492 ff. For the Kouretes as consorts of the Mother see A. B. Cook, *Zeus, a Study in Ancient Religion*, Cambridge, 1914, i. 650, and *ib.* pp. 23, 24, note 6, for the interpretation of the Kouretes as those of the shorn hair. For the Korybantes as Peak-Men, *ib.* p. 107. For the cymbal-clashers as bee-keepers see J. Rendel Harris, *Boanerges*, Cambridge, 1913, pp. 348–357. For prophylactic and inductive functions of armed dancing priests see J. G. Frazer, *GB*³, pt. vi., 'The Scape-goat,' London, 1913, p. 231 ff. For bronze shields of the Idæan cave see F. Poulsen, *Der Orient und die frühgriechische Kunst*, Leipzig, 1912, pp. 74–82.

KŪRKŪS.—1. Race, habitat, and census.—The Kūrkūs belong to the Muṇḍā family of India, and are closely akin to the Kols of Chotā Nāgpur and the Santāls of the Santāl Parganas.[1] They inhabit the Sātpurā hills and the contiguous plains in the Central Provinces, especially the Districts of Hoshangābād, Nimār, Betūl, and the Melghāt Tāluq of Ellichpur. Their total number, as given in the Census of 1911, was 152,363, which marks an increase of 27 per cent on the returns of 1901, whereas the latter showed a decrease of 8 per cent on those of the previous decade, due to the famine years from 1897 onward.

[1] For an account of the distribution of this family, and a discussion as to the propriety of the various terms by which it has been denominated, see *Linguistic Survey of India*, iv. [1906] 2 ff.; and cf. *Census of India*, 1901, i. 278.

2. Tribal organization.—The Kūrkūs are also known by the name Muāsī; but this, again, is used as a subdivisional name along with three other terms, viz. Bāwariā, Rūma, and Bondoyā. Thus the Kūrkūs are divided into four sub-tribes, mainly on a territorial basis, but also with a marked traditional cleavage approximating to caste distinction. The sub-tribes are further divided into totemic septs, named, for the most part, after trees, plants, animals, and other natural objects, animate or inanimate—*e.g.*, Chilātī (*Cæsalpinia sepiaria*), Jāmbū (*Eugenia jambolana*), Bētē (*Gmelina arborea*, Roxb.), Tākhēr (cucumber), Sākōm (leaf), Mūrirānā (peafowl), Dhāprī (ass), Ākhandī (mountain), Kāsā (earth), and Āthoā (wooden ladle). Accounts vary as to the correct number of these septs. According to one version, each sub-tribe has 36 septs. The writer of this article has been assured by Kūrkūs that the number is properly 12½, which is also the figure given by Driver;[1] but the sept names in actual use are found to exceed these limits, so that the statement is probably due to Gond—and ultimately to Hindu—influence. The origin of these sept divisions is naturally hidden in obscurity, though various stories are current which purport to give the explanation. The art. 'Korku' in the *Ethnographic Survey of the Central Provinces* (iii. 'Draft Articles on Forest Tribes' [1907] 54) records a tradition that

'the names are derived from trees and other articles in or behind which the ancestors of each sept took refuge after being defeated in a great battle.'

A variant of this was told to the present writer to the effect that the names were given by Bhagwān on an occasion when he called the ancestors of the tribe into his presence and inquired whence they had come, and, as each one indicated the locality by reference to some special object, Bhagwān named him accordingly. Perhaps this version looks more in the direction of J. G. Frazer's theory that the ultimate explanation of totemistic names is to be sought in connexion with primitive ignorance regarding the processes of procreation, though it would be precarious to lay particular stress on any special interpretation of such unstable traditions. With the predominance of the totemic sept, there is a corresponding weakness in the development of the clan principle. But, while the latter fails to affect the general organization of the tribe, various degrees of relationship are distinguished with great particularity, as among the Hindus; and what Frazer (*Totemism and Exogamy*, London, 1910, iii. 21) notes as characteristic where the 'classificatory system' prevails holds good among the Kūrkūs, viz. that the language

'has separate terms for elder brother [*dādā* or *dādū*] and younger brother [*bōkō*], for elder sister [*bāī* or *jījī*] and younger sister [*bōkōjē*], but no term for brother in general or for sister in general.'

The Kūrkūs, like some sections of the Gond tribe, occasionally seek to establish a Rājput ancestry, and various tales are current with this intent. The element of truth here seems to be that some measure of intercourse has taken place, resulting in the loss of caste on the part of individual Rājputs and their identification with the Kūrkū people. The term Rāj Kūrkū is, however, regarded as an honourable distinction and is usually reserved for the wealthier and more powerful members of the tribe.

3. Social and religious practices.—The Kūrkūs are animists, but their animism is modified by a considerable admixture of Hindu beliefs and practices. This is reflected in the 1911 Census, which

[1] *JASBe* lxi. pt. i. [1892] 128 ff.

gives figures showing more than half the Kūrkū people as Hinduized. But the figures cannot be relied on as an exact index of the change. The process is too gradual and imperceptible to admit of mathematical treatment, especially at the hands of unskilled enumerators. The influence of Hinduism is distinctly noticeable in the current folklore of the Kūrkūs, the simpler substrata of which are now largely overlaid with names and notions foreign to the tribal tradition. Thus the horse, which to the Kūrkū is the agent of malevolent spiritual powers—a notion which perhaps echoes some old-time terror aroused by the incursions of a warlike foe—has become associated with Indra; the crow, which fulfils a traditional function reminiscent of Noah's raven and dove, is transformed into Kāgeśwar; and the spiritual powers, which, according to the limitations of the Kūrkū language and the genius of their primitive animism, were expressed, in highest terms, by the names for the sun and the moon, are now resolved into a council of gods in which not only Bhagwān but also Mahādeo, Indra, and other deities and demi-gods find a place. But the more original elements can usually be distinguished and the crude fabric of a naive cosmology pieced together. They have their own story of creation, in which man is fashioned from red earth; stories to account for the origin of vegetation and of death; a story of a lost revelation in which a dog, the agent of the beneficent spiritual powers and the enemy of the horse, appears with the message written in the venation of a leaf of the Kēndē Nāngan creeper—the signs are still there, but are no longer legible! While the Kūrkūs are coming gradually to recognize Hindu deities and to observe some of the Hindu festivals, much of their religion is still peculiarly their own. Their everyday beliefs and practices are of the aboriginal order, their normal hopes and fears continuing to find common expression by means of animistic symbols and rites. Their more familiar objects of worship—Mūtūā Gōmōij (the village god), Dōngōr Gōmōij (the jungle god), and Hardūlī Gōmōij (the cholera god)—come under this category. They usually consist of mere heaps of stones, frequently with a lump of quartz crystal on top. *Gōmōij* is the Kūrkū word for the sun, which, according to Kūrkū conceptions, is the supreme power in the universe. The Kūrkūs have their own priests (*bhūmkās*), and are in no way dependent on Brāhmanical direction. The customs observed at the birth of a child, and at marriage and funeral ceremonies, are, in the main, likewise peculiar to the people, though in the case of marriage customs in particular there is a tendency to copy their Hindu neighbours.

On the birth of a child, the father is excluded from the house for five days, and compelled to rest content with the shelter of a cattle-shed or similar building not used as an ordinary human habitation. Child-marriage is the exception among the Kūrkūs, though it is said to be increasing under Hindu influence. The septs are exogamous; the sub-tribes normally endogamous. Usually a marriage is arranged through the mediation of friends of the prospective bridegroom's family. These wait upon the parents of the girl, who, as a matter of etiquette, reject the proposals and maintain their opposition thereto for a period which may extend from a few months to two years. But at last their consent is gained and the bride-price is agreed on—usually about sixty rupees. One peculiar custom observed at a Kūrkū wedding may be noticed here, because of its probable relation to earlier polygamous practices: the bridegroom and his elder brother's wife are made to stand on a blanket and embrace seven times. Sometimes the father of the girl insists on the would-be husband working for a period of years in lieu of the payment of the bride-price, but not infrequently this leads to a runaway marriage on the part of the couple concerned, in which case an indemnity may be demanded of the boy's parents. Polygamy is permitted, the main restriction being the practical one which arises from the very frequent absence of means to support a large household. The women-folk are well-treated, but there is no trace of the matriarchate with regard to sept-genealogy or inheritance: children belong to the sept of the father, and the property is divided among the widow and the unmarried sons. Kūrkūs may either burn or bury their dead. The latter is the more common method. The spirit of the deceased is set at rest at a subsequent ceremony called *shidūli*, in connexion with which elaborate rites are performed, extending over three days, and consummated by the erection of a memorial post rudely carved with representations of the sun and the moon, facing the east, and other figures of men on horseback, dancers, apes, peacocks, fowls, crabs, spiders, trees, etc.

The Kūrkūs have many practices which give evidence of their belief in imitative and sympathetic magic.

KURUKH.—See ORĀONS.

KUŚINAGARA (Kuśanagara, or Kusinārā [Pāli]).—The most ancient name is said to have been Kuśāvatī, which is connected in *Jātaka* 531 with a legendary king Kusa, son of Okkāka (Ikṣvāku). Well-authenticated and credible tradition affirms that Gautama Buddha, Śākyamuni, died and was cremated close to Kusinārā, which consequently became one of the four most holy places of Buddhism, and one of the most frequented pilgrim shrines.

At the time of Buddha's death (*c.* 487 B.C., or, as others prefer, 483), Kusinārā was described as 'this sorry little town, this rough little town in the jungle, this little suburban town' (Introd. to *Jātaka* 95, tr. E. B. Cowell and R. Chalmers, i. 231), and evidently was a place of no intrinsic importance. But its association with the last scene of the Buddha's life made it famous throughout the Buddhist world, and drew such multitudes of pilgrims that the petty town became the centre of important religious establishments and grew in population and size. It was visited at the beginning of the 5th cent. after Christ by Fa-Hian (Fa-Hsien), the first Chinese pilgrim, who writes briefly as follows:

'East from here [Rāmagrāma] four [three, Beal and Giles] *yojanas*, there is the place where the heir apparent [Gautama Buddha] sent back Chaṇḍaka with his white horse, and there also a tope was erected. Four *yojanas* to the east from this (the travellers) came to the Charcoal tope, where there is also a monastery. Going on twelve *yojanas*, still to the east, they came to the city of Kuśanagara, on the north of which between two trees, on the bank of the Nairañjanā river [Hiraṇyavatī, Beal; Hsi-lien, Giles], is the place where the World-honoured one, with his head to the north, attained *parinirvāṇa* (and died)' (*Travels*, ch. xxiv., Legge's version). The pilgrim mentions several topes [*stūpas*] and monasteries as still existing, and proceeds: 'In the city the inhabitants are few and far between, comprising only the families belonging to the (different) societies of monks.' He then traces the road in a south-easterly and easterly direction for 17 *yojanas* [12+5, the 5 being 10 in Legge] to Vaiśālī, the modern Basāṛh (about 25° 58′ N., 85° 11′ E.), which lies about 27 miles a little west of north from Patna.

The earlier Pāli account in the *Parinibbāna Sutta* gives the names of several villages lying between Vaiśālī and Kuśinagara (Kusinārā) which would settle the position of the place, if they could be identified, but, unfortunately, there is no clue to their identification. The next and only other detailed description of Kuśinagara after that of Fa-Hian is that recorded by Hiuen Tsiang (Yuan Chwang), about A.D. 637. He enters into much detail concerning both the geographical position of the town and its topographical features. At first sight it would seem that his account should preclude all doubts, and yet, when it is critically considered, doubts remain as to the identification of the site. The publications enumerated in the Literature below examine the question in all its bearings.

The later pilgrim agrees substantially with the earlier in the statement of the distance and direction of the Ashes (=Embers=Charcoal) *stūpa* from the fixed point of the Lumbinī garden

(Rummindēī), the distance according to Fa-Hian being 12 *yojanas*, and according to Hiuen Tsiang about 480 or 490 *li*, at the rate of 40 *li* to the *yojana*. In direction the only difference is that Fa-Hian gives an easterly bearing for all the stages, whereas Hiuen Tsiang places the Ashes *stūpa* to the S.E. of the next preceding stage, namely, the *stūpa* of Chandaka's return. He is habitually more precise in the indication of direction than his predecessor. Fa-Hian states that Kuśinagara lay 12 *yojanas* (about 90 miles marching distance) to the east of the Ashes *stūpa*. Hiuen Tsiang does not give the distance, but places Kuśinagara to the N.E. of that *stūpa*, and notes that the road was a narrow and dangerous path, infested with wild oxen, wild elephants, and murderous robbers who haunted the great forest.

From those elements, combined with the statement that Kuśinagara was close to the river Airāvatī (*al.* Ajitavatī, *al.* Hiraṇyavatī), the present writer deduced the conclusion that the site of Kuśinagara must be sought in Nepāl beyond the passes, close to the Little Rāptī or Airāvatī, somewhere about 84° 51′ E., 27° 32′ N. General H.H. Prince Khadga Sumsher Jung Rana Bahadur, sometime Governor of West Nepāl, in a letter to the *Pioneer Mail*, dated Feb. 26, 1904, declared that the spot where Gautama Buddha attained *nirvāṇa* 'was at the confluence of the Hiraṇyavatī and Achīravatī, near Bhavasār Ghāṭ,' *i.e.* the confluence of the Little Rāptī with the Gandak. That site seems best to satisfy the terms of both the pilgrims' itineraries as traced from the Lumbinī garden, but the identification has not been verified by local examination. So far, the result of the investigation seems to be satisfactory enough; but, when we come to discuss the bearings of Kuśinagara in relation to two other fixed points, Benares and Vaiśālī, fresh difficulties arise. Fa-Hian makes Vaiśālī lie in a south-easterly direction from Kuśinagara, at a distance of 17 *yojanas* (=about 127 miles), and those details do not at all suit the site indicated in Nepāl, while they suit the rival site near Kasiā. Hiuen Tsiang reckons about 700 *li* (say 130 miles marching distance) from Kuśinagara to the kingdom of Benares, in a south-westerly direction. If he meant to reckon the distance to the city of Benares, the actual distance from the supposed Nepālese site is much greater; but, if we assume that the distance was reckoned to the river Ghāgrā (Gogra), the pilgrim's estimate might be accepted. These remarks are enough to indicate the nature of the difficulties which exist in interpreting the detailed itineraries recorded by the Chinese pilgrims in the 5th and 7th centuries. Full statement and discussion of those difficulties is impossible in this place.

Kuśinagara has usually been identified with the remarkable group of Buddhist ruins lying near Kasiā (about 26° 45′ N., 83° 55′ E.), 35 miles due east from Gorakhpur city and in the Gorakhpur District. The principal remains, which lie in the lands of Bisanpur, to the west of Kasiā, were formerly enclosed within a boundary wall surrounding a space of about 36 acres. They comprise many structures, including a great *stūpa* and a temple containing a colossal recumbent image of the Dying Buddha, almost unique in India, and executed in the 5th cent. A.D. Excavation has proved that the site was regarded as one of the highest sanctity continuously from the time of Aśoka to the end of the 12th cent.—during some fourteen or fifteen centuries. Several great monasteries of various dates have been revealed, besides other buildings and crowds of votive *stūpas*. The site unquestionably was one of the most venerated spots in the world for Buddhist pilgrims, and the colossal image of the Dying Buddha agrees well with Hiuen Tsiang's description of a similar image at Kuśinagara. But in other respects the remains do not agree with the pilgrim's detailed account. He saw the remains of a walled town.

> 'The city walls,' he observes, 'were in ruins, and the towns and villages were deserted. The brick foundations of the "old city" (that is, the city which had been the capital) were above ten *li* [2 miles] in circuit; there were very few inhabitants, the interior of the city being a wild waste' (Watters, ii. 25).

It is difficult to believe that all trace of the old walls should have disappeared, but it is admitted that now there is no sign of them, although plenty of extremely ancient fortifications remain at numerous sites in the Gorakhpur District. In the neighbourhood of Kasiā there is no considerable town, and the demand for bricks has never been large. Moreover, the pilgrim places the Ajitavatī (*al.* Airāvatī, *al.* Hiraṇyavatī) river to the N.W. of the town, but there is no river near Kasiā. He also states that in his time the great *stūpa*, although ruinous, was still above 200 ft. high. The existing great *stūpa*, re-constructed or repaired apparently in the 5th cent., prior to the pilgrim's visit, never can have been more than half that height. These facts led the present writer in 1896 to reject decisively the identification of the remains near Kasiā with Kuśinagara. His finding to that effect was generally accepted for some years.

The later explorations of the Archæological Survey, however, have produced fresh evidence complicating the problem. Many hundreds of seals belonging to the Mahāparinirvāṇa monastery have been discovered, besides others belonging to the Makuṭabandha or Bandhana ('Diadem') monastery. Both those institutions undoubtedly were at Kuśinagara. The fact that most of the seals were broken, as if torn from letters and parcels, seems to indicate that the sealed packets were sent from Kuśinagara to the dependent institution near Kasiā. The people at the latter place cannot have addressed letters to themselves. The inference thus deduced is confirmed by the discovery of one seal-die belonging to the Veṭhadīpa or Viṣṇudvīpa monastery, which stood at one of the eight places among which the relics of Buddha were originally divided. So far as the seals go, they lead to the conclusion that the ruins near Kasiā mark the site of Veṭhadīpa or Viṣṇudvīpa.

A still later discovery, however, throws doubt on that conclusion. The Survey found enshrined in the relic chamber of the *stūpa* adjoining the colossal recumbent image a copper plate distinctly inscribed as having been deposited 'in the [*Parinī*]*rvāṇa chaitya*.' We know that a building called the *Parinirvāṇa* temple ('temple du Pan-nie-p'an') existed at Kuśinagara (travels of Ta-ch'êng-têng in Chavannes, *Voyages de pèlerins bouddhistes*, p. 73). That discovery of the copper plate, consequently, seems to indicate that the remains near Kasiā must be those of Kuśinagara. The only other conceivable explanation is that the shrine at Viṣṇudvīpa also may have been called a *Parinirvāṇa chaitya*. The remark must be added that the bearings from Kuśinagara to both Vaiśālī and Benares as given by both pilgrims agree much better with the Kasiā site than with the Nepāl site. On the other hand, it has been shown that the detailed itineraries from the Lumbinī garden, an absolutely certain fixed point, cannot be reconciled with the position of the Kasiā site, which, moreover, has no river and no walled town.

On the whole, the present writer is of opinion that the remains near Kasiā most probably are those of Veṭhadīpa or Viṣṇudvīpa, that the site of Kuśinagara is to be sought in Nepāl, and that it is most likely to be found at the confluence of the Little Rāptī with the Gandak. But positive certainty is not attainable at present. Almost conclusive evidence against the Kasiā site is

afforded by the testimony of the pilgrims that in or about A.D. 405 and 637 Kuśinagara and its vicinity lay desolate and in ruins, whereas we know that at the Kasiā site building was in active progress during the 5th cent., and that it continued for some seven centuries later. Moreover, it is not credible that the road from Kasiā to Benares can ever have been the narrow and difficult path, infested by wild beasts and robbers, described by Hiuen Tsiang. His account suits well if applied to the passes of the Somēsar range.

LITERATURE.—I. *PALI.—Mahāparinibbāna Sutta*, text in *JRAS*, new ser., vols. vii., viii., tr. Rhys Davids in *SBE* xi. (1900); *Jātakas*, nos. 95, 465, 531, text, ed. V. Fausböll (7 vols., Copenhagen, 1877–97), tr. E. B. Cowell, W. H. D. Rouse, etc. (6 vols. and index, Cambridge, 1895–1913), i. 231, iv. 93, v. 141, 146 f., 153 ff., 163.

II. *CHINESE.*—Fa-Hian (Fa-Hsien), *Travels*, ch. xxiv. in any of the versions; Hiuen Tsiang (Yuan-Chwang), *Buddhist Records of the Western World*, bk. vi., in any of the versions (the remarks of T. Watters, *On Yuan Chwang's Travels in India*, London, 1905, ii. 25–45, are specially valuable and cite other Chinese works); I-Tsing, *A Record of the Buddhist Religion*, tr. J. Takakusu, Oxford, 1896, p. xxxiii; *Voyages des pèlerins bouddhistes*, Fr. tr. E. Chavannes, Paris, 1894, p. 73 (the travels of Ta-ch'êng-têng).

III. *MODERN ARCHÆOLOGICAL ACCOUNTS.* — D. Liston, *JASB* vi. (1837) 477; R. M. Martin (Buchanan-Hamilton), *Eastern India*, London, 1838, ii. 357 (those two accounts are unimportant); A. Cunningham, *Arch. Survey Rep.*, i., xvii., xviii., xxii. (1871–85), see General Index; V. A. Smith, *The Remains near Kasiā*, Allahabad, 1896, 'Kusinārā or Kuśinagara and other Buddhist Holy Places,' *JRAS*, 1902, pp. 139–163; J. P. Vogel, *Ann. Rep. Arch. Surv. India*, Calcutta, 1904–05, pp. 43–58, *ib.*, 1905–06, pp. 61–65, *ib.*, 1906–07, pp. 44–67, 'Some Seals from Kasiā,' *JRAS*, 1907, p. 365, 'Arch. Exploration in India,' 1910–11, *ib.*, 1912, pp. 123–127 (discovery of copperplate); F. E. Pargiter, 'A Copperplate discovered at Kasiā,' *ib.*, 1913, pp. 151–153; J. P. Vogel, S. Konow, and J. F. Fleet, 'Veṭhadīpa, Viṣṇudvipa,' *ib.*, 1907, pp. 1049–1054; J. H. Marshall, 'Arch. Explor. in India, 1906–07' *ib.*, 1907, pp. 993–995; Indian Atlas, Sheet 102 (this sheet shows the Tilār Nadī at the N.W. corner, close to Rummindēī [Lumbini garden], which falls just outside the map). The writer of this article suggests that 'the *upachaitya* named Viśuddha in the land of the Mallas,' *i.e.* Tirhūt, mentioned in a Tibetan work as one of the most ancient buildings in India, may be the *parinirvāṇa chaitya* near Kasiā, which was dependent (*upa*) on the homonymous holy place at Kuśinagara (*Ostasiatische Zeitschr.* ii. [Berlin, 1914] 483).

V. A. SMITH.

KWAN-YIN.—Kwan-yin or Kwan-shi-yin (Kwan-non or Kwan-je-on in Japanese) is the Chinese name for Avalokiteśvara, and means 'one who looks (*kuan*) towards a (supplicatory) sound (*yin*) of the world (*shi*).'

1. History.—(*a*) *China.*—The oldest Chinese name was Kuang-shi-yin, 'shining over the sound of the world,'[1] and the original name appears at about the same time in a vague transcription, 'A-ha-Lou-huan,' in a Sukhāvatīvyūha text translated into Chinese A.D. 147–186.[2] The worship of Kwan-yin, however, does not seem to have been very popular until Kumārajīva translated the *Saddharmapuṇḍarīka* (the 'Lotus of the Good Law'), A.D. 402–412, in which he introduced the name Kwan-shi-yin, of which Kwan-yin is a curtailed form. The section on the *Samantamukha* (25th in Chin. and 24th in Skr.) of the text in question specially relates to the Bodhisattva, and has been widely read in China.[3]

The popularity of the belief was further increased when the famous Chi-i, the founder of the Tien-t'ai school in China, wrote several treatises on the *Samantamukha* section (589–618),[4] and since that time practically all the schools of Chinese Buddhism seem to have adopted the worship.

The pilgrims who witnessed the worship of the saint in India also contributed much to the propagation of the belief at home. Fa-Hian (399–414) says that all the followers of the Mahāyāna in India honour the saint, and, when his home-bound ship is in danger during a gale, he hastens to pray to him. Hiuen Tsiang (629–645), who introduced a new translation of the name, viz. Kuan-ts'u-ts'ai, 'Self-existent who gazes' or 'Gazing Lord,' records the presence of images of the saint almost everywhere in India, and mentions a *pūjā* to him by King Śīlāditya of Kanauj during the festival. I-Tsing (671–695) distinguishes the Mahāyāna from the Hīnayāna by the worship of Bodhisattvas, which is peculiar to the former. These facts are fully borne out by the discovery of the sculptured images of the saint from the valley of Gandhāra to the caves of Ellora for a period of about eight or nine centuries.

With the introduction into China of the *mantra* school of Buddhism during the T'ang and the Sung dynasties (*c.* A.D. 700–900), the cult of Kwan-yin seems to have become exceedingly powerful, its climax being reached in the reign of Wen-tsung, who, in 828, ordered that an image of Kwan-yin should be set up and worshipped in all monasteries of the Empire, which then numbered about 44,600.[1] We do not know its fate after the decline of the mystic school in China.

(*b*) *Japan.*—The worship of Kwan-non in Japan is almost as old as the introduction of Buddhism (A.D. 552). In the reign of the Empress Sui-ko (593–628) the saint found an able devotee in the Crown Prince Shōtoku, who built a special hall for him called Yume-dono, 'Hall of Dreams,' in the Hōriuji monastery. Here he used to sit and meditate every morning before he attended to State affairs. He himself wrote a commentary on the *Saddharmapuṇḍarīka*, including the *Samantamukha* section. The subsequent development of Japanese Buddhism centres in the text of the 'Lotus,' the two powerful sects of Tendai and Hokké being founded on the doctrine of the text. The twelve sects of Japanese Buddhism all honour or worship the saint directly or indirectly; there is, in fact, no other deity so popular as Kwan-non. He is the principal figure in art, both pictorial and plastic, in general literature, and in the religious life of the Japanese.

A religious reform movement started lately, basing its foundation solely on the doctrine of Avalokiteśvara, and it is fairly successful.

2. General character.—Kwan-yin is a bodily healer as well as a saviour. His relation to Amitābha is like that of Maitreya to Śākyamuni, and the boundless mercy of Amitābha is made known only through his efforts. Until all beings have been saved he himself will not become Buddha. He would, it is said, ever remain in midstream with his boat ready to carry beings across. There are more than 60 books in the Chinese Tripiṭaka which profess to teach the mercy of the saint.

The principal exposition, however, will be found in the *Samantamukha* section already mentioned. The devotees make this a separate text, calling it the 'Avalokiteśvara sūtra,' and recite it every day. The expedients (*upāya*) with which he approaches the world are minutely described in the text, and are literally believed by the people.

3. Incarnations.—Thirty-three manifestations in which Kwan-yin has approached the people are given in Kumārajīva's translation of the 'Lotus,' whereas in the Sanskrit text only sixteen are mentioned. But the number thirty-three has become so sacred and peculiar to the saint in China and Japan that a simple mention of thirty-three *avatārs* implies him. While instructing the people he would assume any form of incarnation that was necessary, such as a Buddha, *Pratyekabuddha*, *śrāvaka* ('disciple'), Brahmā, Indra, Īśvara, Maheśvara (Śiva), the heavenly general (*Senāpati*), Vaiśravaṇa (Kubera), a Rāja, a merchant, a female merchant, a retired man, a retired woman, a minister, a minister's wife, a Brāhman, a female

[1] See E. H. Parker, *China and Religion*, London, 1905, p. 135.

Brāhman, a mendicant, a female mendicant, an *upāsaka* (layman), an *upāsikā* (laywoman), a boy, a girl, a *deva*, a *nāga*, a *yakṣa* (demon), a *gandharva* (heavenly musician), an *asura*, a *garuḍa*, a *kinnara*, a *mahoraga* (great serpent), or *vajra-pāṇi*. That the number thirty-three was not originally intended, however, is obvious from the fact that the names enumerated often differ from one another. Actually thirty-three forms of Kwan-yin have been created and often represented in art. In Japan there are thirty-three sacred places of pilgrimage where some one of the seven Kwan-nons given below is enshrined and worshipped. The thirty-three shrines of the Western region (Saikoku) are the most famous, while those of the Eastern region (Ban-tō) and those of Chichibu are also renowned. Besides, there is in Kyoto a great hall of Kwan-non called the 'Thirty-three partitioned Hall' (San-jū-san-gen-dō), which contains 1,000 images of the saint. There are smaller heads on the foreheads and haloes, or held in the hands of these images, altogether making up the number 33,333.

4. Activities.—Seven cases of distress are generally specified in which Kwan-yin is ready to extend his hand of mercy. These are generally selected from the thirteen cases of distress of the *Samantamukha* section; they are dangers caused by a sword, fetters or chains, fire, water, demons (*rākṣasa*), goblins (*bhūta*), and an enemy. Sometimes danger by storm is added to these to make four pairs complete, and facilitate pictorial representation.

In the so-called Buddhist litany represented in some sculptured reliefs of Ajanta (no. 4), Ellora (no. 3), Aurangābād (no. 7), and Kānheri (no. 4), we can trace several scenes of dangers more or less akin to the above seven. In the cave of Ajanta (no. 4) we see a representation of dangers from an elephant, a lion, an enemy with a sword, and a young man against a woman, on one row, and those from a fire, a snake, a flood, and a female against a male, on the other, while a standing figure of Kwan-yin is represented at the centre. In Ellora (no. 3), fire, sword, and flood are noticeable, while the rest are quite indistinct. In one of the eastern caves, Aurangābād (no. 7), we have a very good representation of the litany. The eight scenes are specified by a fire, a sword, a thief, and a shipwreck on the right, and a lion, a snake, an elephant, and a man with a woman on the left. Kwan-yin is flying towards the centre to their rescue.

Further, in one of the 108 caves of Kānheri (no. 4) the scenes are ten instead of eight: (1) a girl with a man; (2) a man in a striking attitude before a snake-king; (3) a man brandishing a sword against a female with a child; (4) a man with a stick before another who is prostrating himself; (5) a man squatting and one side invisible; (6) an elephant; (7) a lion; (8) a serpent; (9) a man lifting both hands over his head, his body invisible, probably drowning; (10) a man with his hands raised, probably in a pushing attitude. Thus almost all the thirteen cases mentioned in the 'Lotus' are to be found represented in these caves, which are probably excavations of the 7th or 8th cent. and are certainly Mahāyānistic.

We can safely conclude from these facts, and from the records of eye-witnesses of the same period, that the text of the *Samantamukha* section of the 'Lotus,' or at any rate the belief in Kwan-yin as the saviour of the distressed world, was in vogue and very popular among Buddhists during the same period as it was in China and Japan.

5. Kwan-yins adopted into the mystical school of Buddhism.—Six or seven Kwan-yins are enumerated and often represented in art in China and Japan, especially in the latter.

(1) **Āryāvalokiteśvara** (Shō-Kwan-non, 'Holy'), otherwise called **Mahākāruṇika** ('Great Compassionate'). This is the original Bodhisattva and the most Buddhistic of all Kwan-yins. He is always shown with a lotus-flower in the left hand, with his right hand held up to his breast, and with or without an image of Amitābha over his head.

(2) Sahasrabhuja (Sen-ju, 'Thousand-armed'), otherwise called Sahasranetra (Sen-gen, 'Thousand-eyed'), or Mahāpadmarāja ('Great Lotus King'). This Kwan-yin, as he has the names common to Viṣṇu, Indra, and Durgā, seems to have been borrowed from the Brāhmanical deities. He is generally represented with three eyes (*trilochana*) and forty or thirty-eight arms, the palm of each hand being marked with an eye. Among the things which he carries are a sword, an arrow, a halberd, an axe, a *vajra*, a hook, a rope, or a skull-banner, mostly peculiar to Durgā. He is far the most popular of all Kwan-yins, at least in Japan, fifteen of the thirty-three shrines having him as the chief object of worship against three in the case of (1).

(3) Hayagrīva (Ba-to, 'Horse-headed'), otherwise called Simhābhaya (Shishi-mui, 'Lion-fearless'). He is depicted as horse-headed, two-tusked, and with eight arms, two of which hold a *vajra* and a lotus. He is a *daitya* (demon), hostile to Viṣṇu in the Hindu pantheon, probably converted into a Tantra deity by mystic Buddhists. Only one of the thirty-three temples gives the place of honour to him.

(4) Ekādaśamukha (Jū-ichi-men, 'Eleven-faced'). He has eleven faces, of which the three front are compassionate, the three left wrathful, and the three right admonishing, while the one at the top and the proper face show equanimity. He has four arms, which carry a rosary, a lotus, a waterpot, and a mark of *abhayanda* ('bestowing security'), *i.e.* a raised hand with its palm outward. Ekādaśottama, 'chief of the eleven (Rudras),' is an epithet of Śiva, and so is Chaturbāhu ('Four-armed'). Thus this Kwan-yin too seems to have originated from the Hindu deity. Five places of worship are accorded him.

(5) Chaṇḍi (according to Nanjio, Chuṇḍi), otherwise called Saptakoṭibuddhamātṛ ('Mother of seven Koṭis of Buddhas'). Different from the rest of the Kwan-yins, this is from the beginning a female deity, and her name is never translated, being always Chun-t'i in Chinese and Jun-tei in Japanese. She is represented with three eyes (*trilochana*) and eighteen arms (*aṣṭādaśabhuja*), and is no other than Chaṇḍi Mahā-devī Durgā, also called 'the Goddess of eighteen arms,' who destroyed the *asura* Mahiṣa. An auspicious pot (*bhadrakumbha*), a mark of security (*abhayandamudrā*), a rope, a lotus, a *vajra*, etc., are among the articles carried by her. Only one place honours her.

(6) Chakravartichintāmaṇi, or sometimes Chintāmaṇichakra (Nyo-i-rin, 'Wishing wheel'). He is generally two-armed, rarely six-armed, and is represented in a meditative attitude with his right hand against his cheek, his head slightly turned to the right, and his left hand on his left knee. When he is six-armed, he carries a wishing gem (*chintāmaṇi*), a wheel (*chakra*), a rosary, and a lotus. He occupies six places of worship.

(7) Amoghapāśa (Fu-kū-ken-saku, 'Unfailing rope'), or sometimes simply Amogha ('Unerring'). The common feature of this Kwan-yin is that he has three faces and eight arms, and a rope in his hand. As Amogha is the name of Śiva and a rope is often carried by Durgā, this deity also is probably imported from the Hindu pantheon. One of the thirty-three shrines is sacred to him.

6. Kwan-yins known among Buddhists generally.—We shall name only five here, which are important for their artistic representations.

(1) Byaku-e (Pauṇḍravāsinī, 'White-robed'), the goddess with a white veil and robe, is the chief favourite among artists. Two other Kwan-yins, Byaku-shin (Śvetabhagavatī, 'White-bodied deity') and Yō-i (Pālāśāvali, 'Leaf-streaked'),[1] are closely allied with this deity.

(2) Yō-riu ('Willow-tree'). The peculiarity of this deity is a willow leaf either held in the hand or placed in a pot beside her. The origin of this emblem is doubtful, though an off-hand explanation is not wanting among Buddhists. It may have originated from an olive tree or a palm-leaf, seeing that the goddesses Athene and Victory have been sculptured in Gandhāra. It is, however, just possible that it may be of purely Chinese origin, for we do not know how far this form of Kwan-yin carries us back.

(3) Gyo-ran ('Fish-basket') is another very popular deity who carries a basket with a fish in it. He is probably a counterpart of the fish *avatār* of Viṣṇu, or a representation of Matsyendra or Mīnanātha, who is sometimes worshipped in India and Nepāl.

(4) Koyasu ('Easy-child-birth') is a female Kwan-yin like Tārā, and is often represented with a child in her arm or below her. Properly speaking, she is not a separate Kwan-yin, for any Kwan-yin who is celebrated as answering prayers for easy labour can be called Koyasu. It was under this name that the Madonna of the Christian Church found her way among the worshippers of the Virgin, during the period of persecution in Japan under the Shōgunate government (1603–1867).

(5) Shōgyō (Nīlakaṇṭhaiśvara, 'Blue-necked lord') seems to be another imported from the Hindu pantheon, for Nīlakaṇṭha is the name of a form of Śiva in his capacity of churning the ocean. He is white and three-faced, with a lion's face on the right and a boar's on the left. The Buddha Amitābha is found on his proper head. He has four arms, which hold a stick, a lotus, a wheel, and a conch-shell.

7. The sacred resort of Kwan-yin.—As this article is in a way a continuation of that on Avalokiteśvara (*q.v.*), all the characteristics of the saint found there are omitted here. Only one

[1] Nanjio, no. 973; Parṇasavari seems to be an error.

thing not found there has to be supplied here. That is Potala, Potalaka, or Potaraka,[1] the name of a place sacred to the Bodhisattva, and never separated from the worship. It is sometimes said to be an island in the sea or sometimes a rocky hill. We have Potala (=Παταλα), a harbour at the mouth of the Indus in an island called Patale,[2] and the river here is said to begin to form a Delta like the Nile. If this name can be identified with Patara, now Patera, the capital of Lycia in Asia Minor on the eastern side of the mouth of the river Zanthus, we can further identify Avalokita or Apalokita (in Pāli) of Potalaka with Apollo Patareus, both being in this case patron deities of mariners. This conjecture was once proposed by the present writer to solve the riddle of the strange name 'Avalokita,' though there are some philological difficulties in the identifications. Be this as it may, the name Potala is always transferred with the worship of the saint. In the 7th cent. we find Potalaka as the resort of Kwan-yin in the eastern side of the Malaya range near the extreme corner of the south coast of India.[3] The island Pu-t'o-lo (Potala), in the Chusan group off Ningpo, is the centre of the worship of Kwan-yin in China. This shrine was founded by a Japanese priest, Ye-gaku by name, who was sent by an Imperial order to China as a Buddhist student, but remained there as the founder of the famous Pu-t'o-lo (Potala) monastery (A.D. 858).

We are familiar with the existence of the Potala palace in the heart of Tibet as the residence of an incarnated Kwan-yin, viz. the Dalai Lāma; and in Japan we can trace two or three places which bear the Buddhistic name Fu-da-la-ku as shrines of Kwan-non.

8. The formula of invocation.—The famous six-syllable formula, *Oṁ maṇi padme hūm*, was once Indian, for it is often mentioned in the texts of the Chinese Tripiṭaka translated from Sanskrit (see art. JEWEL [Buddhist]). At present, however, this formula is exclusively Tibetan or at least Lāmaistic. The non-Lāmaistic Buddhists use the old formula *Namo 'valokiteśvarāya Bodhisattvāya* (*Namu-Kwan-je-on-Bosatsu*), 'Hail to the Bodhisattva Avalokiteśvara.'

LABOUR.—See EMPLOYMENT, ECONOMICS.

LAISSEZ-FAIRE.—So great a part has this celebrated phrase played in economic and sociological, and even in religious, discussion during the past century that a whole book was published at Berne in 1886 upon the maxim—A. Oncken's *Die Maxime Laissez faire et laissez passer*. The occasion of its origin is perhaps best understood by a comparison of the policies of two great French Ministers of Finance—Colbert (1619–83) and Turgot (1727–81). The former, towards the end of the 17th cent., brought industry and commerce under a system of extreme regulation and coercion; his ideals were those of the Mercantilists—protection, subsidy, and privilege. A century later, we see a complete reversal of this policy in the financial administration of Turgot, who worked on the principle of commercial freedom. Between these two men stand the founders of scientific economics in France, whose school is usually known under the name of the Physiocrats. It is said, indeed, that the first authentic use of the phrase *laissez-faire* was a retort made by a merchant to Colbert himself.

The names which are of chief importance are those of Gournay (1712–59) and Quesnay (1694–1774). Gournay was an administrator rather than an economist, but he had great influence on Turgot, who accompanied him on some of his official journeys. It is through Turgot that we know of his principles. In his *Éloge* of Gournay, Turgot attributes to him maxims of trade and welfare, based on the utmost liberty of personal competition, and on the view that private interest and general welfare were coincident, if this kind of freedom were given. The complete phrase *laissezfaire, laissez passer* is first attributed to him. Quesnay was the real head of the Physiocrats, and holds a place in French economic science similar to that of Adam Smith in Great Britain. Competition and self-interest were the bonds out of which a compact system of industrial life could alone be created. Though he does not use the phrase *laissez-faire*, he is obviously in line with the movement.

In view of the expressions of Adam Smith, it is of importance to note that the identification of *laissez-faire* with the 'natural system' had taken place in France in the writings of the economist Boisguillebert (1646–1714). It was left to Smith to introduce into the system a still further idea—that of religious guarantee.

Free competition as the advantageous, as the natural, and as the divinely ordered basis of industry—these are the steps of the development. The evil aspects of the phrase are usually charged to Adam Smith's account, and it is, therefore, of interest to understand his statement of the case. Smith was not only an economist, but a moral philosopher, and a Scottish one at that. The classical passages of the *Wealth of Nations* (1776) are in bk. iv. ch. ii. They sum up and extend the whole preceding statement of *laissez-faire*, without, however, using the phrase itself. What is of advantage to the individual is 'advantageous' to the society; this is so 'naturally, or rather necessarily'; and, if we ask the reason of the coincidence, that is because the individual, in seeking his own gain, is 'led by an invisible hand' to promote the social good, although this was no part of his intention. Now, if we turn to Smith's earlier work on the *Moral Sentiments* (1759), we find some remarkable passages, showing that the basis of his ideas in this respect was ethical or religious rather than economic. In the section on 'Utility' (pt. iv. sect. i.)—to quote only one extract—there is a remarkable vindication of the luxury of the rich and the inequality of wealth.

'The rich only select from the heap what is most precious and agreeable. They consume little more than the poor, and in

[1] Potalagāma occurs in the *Buddhacharita* (Chinese), and Potala and Potalaka are the names of two demons living there (see *SBE* xix. [1883] 244).

[2] See Monier-Williams, *Sanskrit-English Dictionary*, Oxford, 1872, *s.v.* 'Potala'; Ptolemy, VII. i. 59; Pomponius Mela, iii. 7; see also C. Lassen, *Ind. Alterthumskunde*, i.[2] [Leipzig, 1867] 125, ii.[2] [1874] 191 f., and especially V. A. Smith, *Early Hist. of India*[2], Oxford, 1908, pp. 99–102.

[3] S. Julien, *Mémoires de Hiouen-Thsang*, Paris, 1857–58, x. 123.

spite of their natural selfishness and rapacity, though they mean only their own conveniency, they divide with the poor the produce of all their improvements. They are *led by an invisible hand* to make nearly the same distribution . . . as if the earth had been divided into equal portions among all its inhabitants

It is no wonder that, after the miseries of the Industrial Revolution, teaching of this kind brought some odium upon economic science; and it was overlooked that Smith had established his objections to existing forms of regulation by inductive, far more than by deductive, reasoning.

Smith's views must be judged in the light of two general facts: (1) that he was leading a reaction against excessive regulation; and (2) that the *form* of industry in his time was itself so individualistic. It was still the day of the individual manufacturer and the small unit; to ask for freedom at that time was practically to ask for independent competition. It does not follow that, when the form of industry had changed, Smith would have construed freedom in the same way. With the larger unit created by the Factory System for both labour and capital, it must have become apparent that to combine was a free act, and that economic freedom could no longer mean independent or individualized competition.

Some hidden fallacies in the early statement of *laissez-faire* are exposed by D. G. Ritchie in his *Natural Rights* (London, 1895). Especially dangerous was the introduction of the word 'natural.' For the natural is taken to mean the ideal, or the original, or the non-human. As soon as we say that a certain system is a 'natural' system, we first idealize it, and then, by a transition to another meaning of the word, we identify it with what is not of human device or with what is prior to human institution. Thus we slip into the position that a non-regulated system is an ideal one. But, in fact, nature in its broadest sense includes human life; and 'is made better by no means, but nature makes that means.'

Competition without control has not actually been taught by any English economist; but phrases have been seized on and misapplied. In spite of the opposition created to the idea of competition by stressing the words of early writers, an analysis of recent thought shows a desire not to suppress, but only to reorganize, this force. The claims of democracy are often, indeed, for greater freedom of competition; it is sought to remove privileges and monopolies, to extend education, to make it possible for any one with ability to challenge any position in the State. And the greatest social bitterness is not between those who compete most with each other, as workman with workman, or employer with employer, but between classes who do not compete, such as employer and employed, and often simply on the ground that effective competition is so limited across that line. The real objection that is summed up in the bitter use of the phrase *laissez-faire* is to the defects of a *certain organization* of industrial competition.

We may indeed say that, properly understood, *laissez-faire* is a maxim quite in keeping with the extension of State control, if the form of industry so changes as to require this. What is the object of the verb? In Smith's time it was the individual who was the economic agent; then, said Smith, leave him free. In Mill's time it was the group; then let the group be free to work. In our time, for many purposes which only economic evolution could have revealed, it is the municipality or the State; then let the State be free to do its proper work. The object of the verb can be the individual, the group, or the public authority; for we cannot fix the form of industry, or force on modern conditions the meaning which any maxim had a hundred and thirty years ago. The law of the land should not suppress, or refuse to give scope for, any kind of social agency or force; but, in the changing conditions of industrial life, it must guard the rights and watch the limits of each force and agency.

LAITY, LAYMEN.—This article is not concerned, unless indirectly, with the origin, development, and nature of the Christian ministry. It deals only with the position, rights, and duties of those Christians who are not of the official ministry, and the latter will be referred to only negatively, or in connexion with elections by the laity or similar matters. A large controversy will, therefore, be left entirely on one side. We have to consider what the laity were called by the older Christian writers, and what position they held in the divine society, especially with reference to appointments, to worship and the sacraments, to councils, and to Church work generally.

1. Names of the laity.—In the Bible ὁ λαός is used of the Jewish people, as distinguished from their priests and rulers, in Mt 26^5, Ac 5^{26} etc., and especially as distinguished from the high priest and the priests in He 5^3 $7^{5.\ 27}$; so, in the OT, in Ex 19^{24}, 2 Ch 24^{10}. Similarly, ὁ λαός is frequently used in the Greek liturgies to denote the congregation as distinguished from the officiating priest; for an early example see *Apostolic Constitutions*, viii. 12 (at end): 'Let all the people say, Amen.' The Latin liturgies have *populus* in a similar place, and the Syriac liturgies have the Syriac equivalent *'amā* (*e.g.*, *Testament of our Lord*, i. 21, which we possess only in a Syriac translation by Jacob of Edessa, *c.* A.D. 700). Elsewhere in Latin writings *plebs* is used for the laity, as ordinarily in Tertullian, Cyprian, Jerome, and Augustine, and in can. 77 of the Council of Elvira (*c.* A.D. 305).

From λαός is derived λαϊκός (*laicus*), which, however, is not found in the NT or LXX. In Clement of Rome (*Cor.* i. 40, a passage which describes the relation of the layman to the clergy) a step is taken (*c.* A.D. 95) towards the somewhat later use of λαϊκός as a technical substantive, 'a layman'; but it is there used only as an epithet. The 'lay-man' (ὁ λαϊκὸς ἄνθρωπος) is bound by the lay ordinances (τοῖς λαϊκοῖς προστάγμασιν). At the end of the 2nd cent. Clement of Alexandria (*Strom.* iii. 12, near end) uses λαϊκός as a substantive, 'a layman,' in contrast to 'presbyter' and 'deacon,' with reference to marriage, clerical and lay; but he also uses it as an adjective, and speaks of λαϊκὴ ἀπιστία in *Strom.* v. 6, *i.e.* 'the unbelief of the people.' Tertullian also uses *laicus* for 'a layman' (*de Bapt.* 17, *de Exhort. Cast.* 7), as do the Roman clergy in a letter to Cyprian (Cypr. *Ep.* xxx. 5). The substantive λαϊκός is found in the *Answers to the Orthodox* (Ἀποκρίσεις πρὸς ὀρθοδόξους, § 97), which at one time was assigned to Justin Martyr, but is certainly of a somewhat later date; and often in the 4th cent., as in the *Clementine Homilies* (now usually assigned in their present form to that date): see the *Ep. of Clement to James*, § 5; in the Sacramentary of Sarapion (*JThSt* i. [1899–1900] 101), where a prayer is called χειροθεσία λαϊκῶν ('blessing of the laymen'); and in the *Apost. Const.* (*e.g.*, viii. 11 and 28, where λαϊκοί are opposed to 'the clergy' [οἱ τοῦ κλήρου or κληρικοί]); it is also found frequently in the *Apostolic Canons*. In Syriac we find as a rendering of λαϊκός the words *'almāyā* and *'almānāyā*, lit. 'one of the world,' as in the *Test. of our Lord*, i. 35, in the litany which has a suffrage for 'the faithful laymen'; see other instances in R. Payne Smith, *Thesaurus Syriacus*, ii. (Oxford, 1901) 2900 f.

Another, but less common, word for 'layman' is ἰδιώτης, which has sadly degenerated in meaning, having become in English 'idiot.' But in classical Greek it means simply 'private person.' Philo (*de Vit. Mos.* iii. 29, ed. Mangey, ii. 169) uses it to denote a Jew who is not a priest. In 1 Co $14^{16.\ 23}$f. it probably means 'one who has not the charisma of tongues' (RVm; see notes by A. Robertson and A. Plummer *in loco* [*ICC* '1 Cor.,' Edinburgh, 1911, pp. 313 f., 318 f.]). In Ac 4^{13} it means 'unlearned' or 'uneducated'; here Tyndale and Coverdale render it by 'laye people,' a translation which may be compared with our use of the word 'layman' to denote one who is

not versed by training in the particular matter in hand, a sense in which ἰδιώτης was also used in classical Greek (see Liddell and Scott, *s.v.*). The word is similarly used in 2 Co 11[6]. In 1 Co 14[16] the 'place of the ἰδιώτης' can hardly refer to the special seats occupied by laymen in the Christian assembly (below, § 6). In an interpolation in Pr 6[8] cited in the *Apost. Const.* (ii. 63), ἰδιῶται is opposed to βασιλεῖς, and means 'the king's subjects'; the corresponding passage of the older *Didascalia*, which the *Constitutions* incorporate, here has 'rich and poor' (see F. X. Funk, *Didasc. et Const. Apostolorum*, Paderborn, 1905, i. 180). Isidore of Seville, early in the 7th cent., uses *privatus* (as well as *laicus*) in the sense of 'layman' ('nec privatis nec clericis,' *de Eccl. Off.* ii. 25).

Another name of the laity is 'the brethren' (οἱ ἀδελφοί). In the *Apost. Const.* ii. 57 (near the beginning) they are so called in contrast to the bishop and deacons (not in the parallel *Didascalia*); cf. 1 Ti 4[6], where 'the brethren' means 'the whole community.' It is a little curious to note in this connexion that in Ac 15[4. 22] the expressions 'the church,' 'the whole church,' are used in contrast to 'the apostles and elders.'

2. Who is a layman?—Hitherto 'the laity' have been spoken of negatively, as being those Christians who are not ministers. But, owing to modern conditions, and especially owing to the divisions of Christendom, some further definition is necessary. For instance, in England, it has been maintained that every Englishman there resident is in the eye of the law a layman of the Church of England, unless he is a bishop, priest, or deacon. Apart, however, from legal rights, every Christian community is bound to ask itself who are its laymen, not only from a negative, but also from a positive point of view. The first step in the definition has usually been to affirm that he must be a baptized person, or at least a catechumen; with regard to the latter qualification we may note—and this has a bearing on the practice of missionary Churches of the present day—that the *Canons of Hippolytus* style catechumens 'Christians' (can. x.; ed. H. Achelis, in *TU*, new ser., Leipzig, 1891, § 63). But the question whether a baptized person is a layman belonging to a particular Christian community is not so easy to answer. A positive definition of 'laity' may perhaps be found in some such phrase as 'those who (not being ministers) from baptism or after baptism have been attached to' that community, and 'who have not by any overt act declared their dissent from its communion.' This does not raise the question of 'full membership,' by which is often meant the status of a communicant.

3. The priesthood of the laity.—This, which seems at first sight to be a contradiction in terms, is nevertheless asserted of Christians in 1 P 2[5. 9] and Rev 1[6]. They are a 'holy priesthood, to offer up spiritual sacrifices . . . a royal priesthood, a holy nation.' Christ 'made us [all Christians] to be a kingdom, to be priests unto his God and Father.' The same thing had been asserted with equal emphasis of the Jews in Ex 19[6]: 'Ye shall be unto me a kingdom of priests, and an holy nation.' The NT asserts in the first place the priesthood of our Lord (*e.g.*, in Hebrews, *passim*), and then, as derived therefrom, the priesthood of His people. In the highest sense of the word, Christianity is a sacerdotal system. But this must not be misunderstood. It does not mean that the Christian ministry is vicarious, and that its ministers take the place of the people in approaching God. When, therefore, J. B. Lightfoot says, perhaps rather hastily (Essay on 'The Christian Ministry,' *Philippians*, ed. London, 1903, pp. 181, 185), that Christianity 'has no sacerdotal system,' he means, as he himself most truly explains (*ib.*), that 'it interposes no sacrificial tribe or class between God and man, by whose intervention alone God is reconciled and man forgiven. Each individual member holds personal communion with the Divine Head. To Him immediately he is responsible, and from Him directly he obtains pardon and draws strength. . . . As individuals, all Christians are priests alike.' For the same view of the priesthood of the laity see C. Gore, *The Church and the Ministry*[4], p. 76 ff.

Let us consider one practical result of this NT doctrine. It follows, as the ancient liturgies so often assert, that the laity offer the Christian sacrifice of prayer and praise equally with the officiating minister, though he is or may be the instrument by which they offer it, for it would ordinarily be inconvenient if all people spoke at once in Christian worship. This fact is the rationale of the 'Amen' or 'So be it' by which the laity audibly 'seal' the prayers and praises. Jerome compares the Amen of the people at Rome to a thunder-clap, so loud and hearty was it:

'Ubi sic ad similitudinem caelestis tonitrui *Amen* reboat, et vacua idolorum templa quatiuntur?' (*Com. on Galatians*, Procem. in lib. ii.).

The same may be said of the 'prayers in common' of which Justin (*Apol.* i. 65) and Augustine ('communis oratio,' *Ep.* lv. 34 Ben. [cxix.] *ad Inquis. Januarii*) speak, and which must have involved some audible partaking by the laity in the supplication (see INTERCESSION [Liturgical]). Such also are the litanies and hymns (especially the Sanctus) which became common at least from the 4th cent. onwards. In the *Test. of our Lord* the whole people are bidden to repeat with the bishop part of the central act of the Eucharist (i. 21), a direction with which we may compare the old custom of 'concelebration' (priests audibly celebrating the Eucharist along with the bishop). All this is evidence of the universality of the doctrine that every Christian layman possesses a priesthood.

The same teaching is much emphasized by the Fathers. In the middle of the 2nd cent. Justin Martyr (*Dial.* 116 f.), quoting Mal 1[11], dwells on the fact that all Christians 'are the true high-priestly race of God,' and that the Eucharist is offered by 'Christians in all places throughout the world.' He speaks similarly, addressing Jews, of the Jewish sacrifices being offered 'by you and by those priests of yours.' So, at the end of the century, Irenæus (*Hær.* IV. viii. 3, V. xxxiv. 3) says that 'all the righteous possess the sacerdotal rank' and that 'all the disciples of the Lord are Levites and priests'; and, a little later, Tertullian (*de Exhort. Cast.* 7) asks, 'Are not even we laics priests?' (this work was written after his secession to Montanism). In the 3rd cent. Origen (*Hom.* 9 *in Lev.* § 1) says to the layman in general:

'Dost thou not know that the priesthood (*sacerdotium*) is given to thee also, that is, to all the church of God and the people of believers? [he quotes 1 P 2[9]]. Thou hast, therefore, the priesthood because thou art a priestly (*sacerdotalis*) race [cf. Justin above], and so thou oughtest to offer to God the sacrifice (*hostiam*) of praise, of prayer, of pity, of modesty, of justice, of holiness.'

In the 4th cent. Jerome declares (*c. Lucif.* 4) that the priesthood of the layman is his baptism ('sacerdotium laici, id est, baptisma'); he uses the word 'baptism' in the full sense of the complete rite.[1] So Augustine (*de Civ. Dei*, XVII. v. 5) says, 'He gives the name priesthood to the very people whose priest is the mediator of God and man, the man Christ Jesus' (he quotes 1 P 2[9]). Many other such passages might be cited. The teaching was common to all ages.

The doctrine that all Christian people are priests does not, it need hardly be said, mean that there is no such thing as a ministerial priesthood. The whole nation of Israel were priests, and yet Aaron and his sons had a special or ministerial priesthood. And so, without discussing controverted questions, we may conclude that there is at least no contra-

[1] It has often been held that the priesthood of the laity is given to the baptized, not at the immersion, but at the laying on of hands or confirmation (A. J. Mason, *Relation of Confirmation to Baptism*, London, 1891, p. 462 f.). But it seems unnecessary to distinguish thus sharply between different parts of what was originally one rite.

diction involved in the assertion of the same characteristic in Christianity. The confusion of minister and layman as to function is such ἀταξία ('want of order') as the author of the *Apost. Const.* so eloquently protests against (viii. 31, 46). Clement of Rome (*c.* A.D. 95) says that the Christian ministers are 'rulers' and 'presbyters' (ἡγούμενοι, προηγούμενοι, πρεσβύτεροι), to whom the laity are to be subject (ὑποτασσόμενοι) and to give reverence (*Cor.* i. 1, 21). Hermas, a little later, calls the clergy 'the rulers' (προηγούμενοι, *Vis.* ii. 2, iii. 9). The same nomenclature is found in He $13^{7.\ 17.\ 24}$, and also in 1 Th 5^{12}, where the ministers are 'they that are over you' (προϊσταμένους ὑμῶν). See, further, § 5.

4. Election of bishops and clergy by laity.—Under this head we have to consider a very important part in the Church played by laymen. We note that in Ac $6^{3.\ 5}$ the people choose, but the apostles appoint (ct. ἐπισκέψασθε and ἐξελέξαντο with καταστήσομεν). The laity elected the Seven and placed them before the apostles, who laid hands on them with prayer. And this was the ancient method of appointment, though the details might vary. In the *Didache* (§ 15, *c.* A.D. 120?) the writer bids the people to elect (χειροτονήσατε) for themselves bishops and deacons, *i.e.* the local ministry; nothing is said of the appointment of the itinerant 'apostles and prophets.' It must here be remembered that χειροτονεῖν does not necessarily carry with it the idea of ordination by the persons electing (see below). Early in the 4th cent. popular election is much insisted on by Athanasius. He quotes (*Apol. c. Arian.* 6) a letter of the Egyptian bishops which says that he was elected (A.D. 326) 'by a majority of our body [the bishops] in the sight and with the acclamation of all the people,' in order to refute a calumny of the Arians that he was clandestinely consecrated by six or seven bishops unknown to the laity. Gregory of Nazianzus (*Orat.* xxi. 8) says that Athanasius was elected 'by the vote of the whole people, not in the evil fashion which has since prevailed, nor by means of bloodshed and oppression; but in an apostolic and spiritual manner, he is led up to the throne of St. Mark.' He means, no doubt, that this was the ancient method of election. The same practice is seen in the Church Orders—*e.g.*, in the *Test. of our Lord* (i. 20), which speaks very emphatically about the election of bishops ('being chosen by all the people according to the will of the Holy Ghost'), and somewhat less so about presbyters ('testified to by all the people,' i. 29) and deacons ('chosen as has been said above,' i. 33). The other Church Orders make similar provisions (*Canons of Hippolytus*, can. ii. [ed. Achelis, § 7], *Verona Latin Fragments of Didascalia*, etc., ed. E. Hauler, Leipzig, 1900, p. 103, *Egyptian Church Order*, § 31 [ed. H. Tattam, *The Apostolical Constitutions*, London, 1848, p. 32], *Ethiopic Church Order*, § 21, *Apost. Const.* viii. 4). We find the same regulations in the Gallican code known as the *Statuta Ecclesiæ Antiqua*, perhaps made by Cæsarius of Arles, *c.* A.D. 500 (formerly cited as the canons of a supposed Fourth Council of Carthage, A.D. 398). In can. 22 it is directed that a bishop is not to ordain any one without the advice of his clergy, and that he is bound to seek the assent (*conniventiam*) and testimony of the citizens—a phrase which has a bearing on a well-known dictum of St. Cyprian (see below, § 8; for a translation of the *Statuta* see C. J. Hefele, *Councils*, Eng. tr., Edinburgh, 1871–96, ii. 410 ff.).

On the other hand, the people were at an early date deprived of this right. The Council of Laodicea (*c.* A.D. 380) says that 'the choice of those to be appointed to the priesthood shall not rest with the multitude' (can. 13). This movement may have been due in part to the encroachments of the State and its officials after the time of Constantine, and it may have also been due to the interpretation placed in the East on the 4th canon of Nicæa (A.D. 325), which says that the bishop is to be appointed (καθίστασθαι) by the comprovincial bishops, three of whom at least shall meet. The first of the *Apostolic Canons*, a collection made *c.* A.D. 400, though some of them are doubtless older, has a similar provision, but with χειροτονείσθω.[1] The Nicene rule was understood by the second Council of Nicæa, the '7th Ecumenical' (A.D. 787, can. 3), as meaning that only the bishops could *elect*, and it forbids, with reference to *Apost. Canon* 31, the election of a bishop, priest, or deacon proceeding from a secular prince; but the Latins at first interpreted the Nicene canon to refer to the confirmation of election and consecration to the episcopate by the comprovincial bishops (Hefele, *op. cit.* i.[2] [1894] 385 f.). And this is probably the real meaning. A bishop, before being consecrated, must be approved by the people (and clergy) whom he is to serve, and also by the bishops of the province. This is the true reason (one can hardly doubt) of the ancient rule about the three bishops consecrating the elect. At a later date it was suggested that this was to remove all fear of invalidity in the position of any one of the consecrators; but this could hardly have been a consideration at so early a date. Three bishops, or, as *Apost. Canon* 1 says, 'two or three,' must come together to the election that they may signify the assent of the comprovincials.

In Western Europe, from the time of Charlemagne onwards, the election by the laity to bishoprics was represented by the sovereign's nomination, or in England in Anglo-Saxon times by that of the Witenagemot. But patronage of benefices by laymen became very common. This was exercised (*a*) by an individual, who originally, in many cases, was, or represented, the founder of the church; or (*b*) by a corporation external to the benefice, for the same reason; or (*c*) by the persons to be ministered to, either as a whole body—rarely in the Anglican, but normally at the present day in the Presbyterian, polity—or through representatives chosen by them. The system of the Church of Ireland is a variation of the last method. When a benefice is vacant, a nomination to it is made by a patronage committee, consisting of the bishop of the diocese, three persons nominated by the diocese, and three persons appointed by the parish where the vacancy had occurred. In all Episcopal bodies the bishop has, at least in theory, a power of veto on elections to parishes, though there is usually an appeal to the metropolitan or to the comprovincial bishops if he refuse to institute; but in the Church of England this veto can be exercised only with considerable difficulty.

The share of the laity in appointing bishops, etc., in the present day may be seen from the following conspectus.

(*a*) *Anglican Communion* (see further details in art. 'Diocesan Bishop,' by E. A. Welch in the *Prayer Book Dictionary*, London, 1912, p. 279 ff.).—In *England and Wales* the sovereign issues a *congé d'élire*, and on the advice of the Prime Minister nominates a person to the dean and chapter of the cathedral, who elect, and the election is confirmed by the metropolitan; if there is no dean and chapter, the sovereign nominates directly. In *India* the sovereign acts on the advice of the Secretary of State for India. In *Scotland* a bishop is elected by a special body chosen *ad hoc*, consisting of two chambers of presbyters and laity of the diocese, and for his election a simple majority in either chamber is necessary; the assent of a majority of the comprovincial bishops is required to confirm the election, and, unless it be thus confirmed, proceedings must begin again. In *Ireland* the system is similar (except in the case of the diocese of Armagh, where an abnormal procedure takes place), but the

[1] This word, which often means 'elect,' apparently in these canons means 'ordain,' as the 2nd canon says that a presbyter and deacon and the other clergy (κληρικοί) are to be 'ordained' (χειροτονείσθω) by one bishop.

majority must be one of two-thirds; in some cases the choice, or the selection from certain names, is left to the bishops (see the *Constitution of the Church of Ireland*, Dublin, 1909, vi. 5). In *Canada*, *New Zealand*, *Australia*, and *S. Africa* the system is similar, with some variations of detail, especially as to the majority required in the different orders; in S. Africa the electing body is a special one, called the 'Elective Assembly'; the clergy elect, and the laity assent. In the *United States of America* a like practice is in vogue for the ordinary diocesan bishoprics, but to the 'missionary bishoprics' the House of Bishops appoints. Each diocesan 'convention' (synod) makes its own rules for election. In all the non-established branches of the Anglican federation the assent of the laity is required to an episcopal election.

(*b*) *Roman Communion.*—The laity appear to have no official share in the election of bishops, but in countries where a concordat with the pope is in force, as was the case till recently in France, the sovereign or the State nominates.

(*c*) *Eastern Orthodox Communion.*—Here the laity usually have a voice in electing bishops, though the practice differs in different countries; for a detailed account see M. G. Dampier, *The Organization of the Orthodox Eastern Churches*, London, 1910 (which, however, does not give information about the patriarchates of Alexandria, Antioch, and Jerusalem; these seem to follow Constantinople closely). In the patriarchate of *Constantinople* the bishops of the Holy Synod and the laity elect the patriarch; the whole assembly selects three names, and the bishops choose one of them. A mixed council of bishops and laymen attend to the temporal affairs of the patriarchate. A diocesan bishop is appointed by the Holy Synod, which consists of bishops only. The laity must be consulted before the bishop appoints a parish priest, or the parish priest appoints a deacon; and each parish has a lay committee for parochial affairs. In *Russia* the Holy Synod—which here consists of bishops, a few archimandrites (heads of monasteries), two representatives of the parish clergy, and the Tsar's procurator (a layman who has no vote in doctrinal matters, but is the connecting link between Church and State)—submits three names for bishoprics to the Tsar, who selects one. The parish priests are appointed by the bishop, and the clergy and laymen of each parish appoint a layman to administer the finances. In *Cyprus* the clergy and laity elect the bishops. The Synod consists of bishops only, for managing all ecclesiastical affairs. In *Mount Sinai* the archbishop is elected by the monks. In *Greece* the Holy Synod (consisting of bishops only) submits three names for bishoprics to the king, who selects one. Priests and deacons are appointed by the bishop after consulting their laymen. The king appoints a commissioner (*ἐπίτροπος*) to attend the Holy Synod, but he has no vote. In *Rumania* the bishops are elected by the other bishops and by (lay) members of Parliament. In *Servia* they are elected by the synod of bishops, but the metropolitan of Belgrade is elected by the bishops and the chief clergy and lay officials of the country. In *Montenegro* the metropolitan is nominated by the king; priests are appointed by the metropolitan. There are no other bishops besides the metropolitan. In *Bulgaria* the laity have a share in the election of the exarch and of the other bishops, and also of the parish priests. In *Austria-Hungary* practice varies. The metropolitan of Karlowitz is appointed by a mixed body, but the bishops of the metropolitanate appoint to the other bishoprics; while in Hermannstadt both metropolitan and bishops are elected by a mixed body. The metropolitan and bishops in Dalmatia are nominated by the Crown.

(*d*) *Armenian Communion.*—For details see M. Ormanian, *Church of Armenia*, ch. xxxi. (Eng. tr., London, 1912, p. 151 ff.). In most countries the Armenian parish priests are elected by the parishioners in the first instance, but the laity have no voice in the selection of priests ordained in monasteries. The 'catholici' of Sis and Aghthamar, the patriarchs of Constantinople and Jerusalem (patriarchs are of inferior rank to the catholici among the Armenians), and the diocesan bishops are elected by mixed councils of laymen and clergy, the former largely preponderating. In Russia the influence of the laity is much less. 'The government permits the existence of lay councils (ephorates) [of parishes], but it has done away with the diocesan councils, whose prerogatives have been transferred to a synod and to consistories made up of ecclesiastics' (Ormanian, p. 153).

(*e*) *East Syrian or Nestorian Communion.*—The laity have an indirect share in clerical appointments. The bishops are supposed to ordain a parish priest only when the parishioners elect him, and, as a matter of fact, they generally consult their wishes; but ordinations without 'titles' or cures of souls assigned are somewhat frequent. In the case of bishoprics, a vacancy is usually filled from the late bishop's nephews or cousins, as the office can be held only by those who have been brought up as 'Nazirites'; of these there are sometimes more than one, and the laity are supposed to choose from them a successor. See A. J. Maclean and W. H. Browne, *The Catholicos of the East and his People*, London, 1892, pp. 186 ff., 205 f.

From what has been said it will be seen that the ancient share of the laity in electing to ministerial offices has remained, though more or less altered, in a large part of Christendom till the present time.

5. **The laity and the sacraments.**—(*a*) *The Eucharist.*—No real instance has been found, except in some heretical or separated bodies, of a layman being allowed to celebrate the Eucharist, even in cases of emergency. In connexion with this it is perhaps necessary to repeat the caution that *εὐχαριστεῖν* is sometimes used in Christian antiquity in the sense of 'saying grace' or 'asking a blessing' at a meal, and that it does not always mean 'to celebrate the Eucharist.'

The 18th canon of Nicæa (A.D. 325) asserts that even deacons have not the power of 'offering,' *i.e.* of celebrating, the Eucharist[1] (*τοὺς ἐξουσίαν μὴ ἔχοντας προσφέρειν*), while presbyters are expressly called 'those who offer' (*τοῖς προσφέρουσι*). The same thing is found in the Church Orders, where the bishop and the presbyter are expressly recognized as being capable of celebrating the Eucharist (for the presbyter, cf. *Apost. Const.* iii. 20, vii. 26, *Ethiopic Didascalia*, § 16, *Test. of our Lord*, i. 31), while the deacon is explicitly forbidden to do so (*Apost. Const.* viii. 46); cf. the repeated statement that a deacon is not ordained to the priesthood—which would have been meaningless if the deacons had not been pushing their claims (*Test. of our Lord*, i. 38; *Statuta Ecclesiæ Antiqua*, § 4; *Egyp. Ch. Order*, § 33; *Ethiop. Ch. Order*, § 24; *Verona Fragments of Didascalia*, ed. Hauler, p. 109). But, if a deacon could not celebrate the Eucharist, *a fortiori* a layman could not do so.

Nor was this a prohibition invented in the 4th century. Not only is there no evidence of a layman inside the Church celebrating the Eucharist in ante-Nicene times, but Tertullian, in a work written before his secession (*de Præscr. adv. Hær.* 41), by implication strongly repudiates such a theory. He condemns the heretical sects because they confused the functions of laity and ministry.

'To-day one man is their bishop, to-morrow another; to-day he is a deacon who to-morrow is a reader; to-day he is a presbyter who to-morrow is a layman. For even on laymen do they impose the functions of priesthood.'

With this it is instructive to compare the same writer's language after his secession. In *de Exhort. Cast.* 7, after saying that all laymen are priests (see above, § 3), he continues:

'It is the authority of the Church, and the honour which has acquired sanctity through the joint session (*consessus*) of the Order, which has established the difference between the Order and the laity. Accordingly, where there is no joint session of the ecclesiastical Order, you offer [see above], and baptize (*tinguis*), and are priest, alone for yourself. . . . You have the right of a priest in your own person, in cases of necessity.'

Here Tertullian, writing in his later days, claims for a layman, if necessity urges, the right *inter alia* to celebrate Holy Communion.

It might be suggested that in this respect Montanism was conservative of an old custom which had elsewhere died out, owing to the supposed increase of 'sacerdotal' feeling in the Church. But, whatever Montanism was, it was not, and did not profess to be, conservative. Such, indeed, is not the characteristic of any movement which magnifies 'charismatic' powers. Montanism professed to have received a new inspiration by the Holy Ghost, and rather despised than honoured old existing customs. See, further, a long investigation in Gore, *op. cit.* pp. 184–196, and Appended Note H on Montanism (pp. 355–359).

(*b*) *Baptism.*—Had we no history to guide us, we might have imagined that, if the laity could not celebrate the Eucharist, neither could they baptize. And yet, though Christian opinion has not been unanimous on the subject, the great majority have held that, in cases of necessity, a layman, and even a laywoman, may rightly baptize.

It is not quite conclusive that the apostles did

[1] For this meaning of *προσφέρειν* or *ἀναφέρειν* see the present writer's *The Ancient Church Orders* (Cambridge, 1910), p. 48 f. These words sometimes mean 'to bring the oblation to the bishop' (*ib.* and Ancyra [A.D. 314], can. 2; but the latter has to offer the bread and the cup').

not, as a rule, themselves baptize, though they laid on hands after baptism. St. Paul says that it was not his usual custom to baptize (1 Co $1^{14ff.}$); St. Peter *commanded* Cornelius and his company to be baptized (Ac 10^{48}). It is also not quite certain, though it is probable, that the apostles did not themselves baptize all the three thousand converts in Ac 2^{41}; if they did not do so, lay brethren must have baptized, since there was as yet no ministry other than the Twelve. But, though the NT evidence is not quite conclusive, opinion from early times favoured lay baptism. Tertullian (*de Bapt.* 17) allows it to deacons and laymen, but not to women; in *de Virg. Vel.* 9 also he forbids women to baptize. But we may note that his argument in the former passage, that 'what is equally received can be equally given,' if valid, should refer to women no less than to men. The older *Didascalia* (3rd cent.; iii. 12; Funk, i. 210) allows it to deacons, but (iii. 9; Funk, i. 198) forbids it to women; the permission to deacons is not found in the parallel *Apost. Const.*, which here incorporate the *Didascalia*. The Spanish Council of Elvira (*c.* A.D. 305) says that a catechumen on a sea voyage or in a place where there is no church near can be baptized in great illness by a layman who has not apostatized or been a bigamist (can. 38), and similarly allows a deacon on some occasions to 'rule' a congregation—apparently in a country district—and to baptize (can. 77); but in all these cases confirmation by the bishop is to follow unless the baptized person dies. The *Test. of our Lord* (*c.* A.D. 350?) allows deacons to baptize (ii. 10). Jerome (*c. Lucif.* 9) says that, 'if necessity so be, even laymen may, and frequently do, baptize.' Augustine (*c. Ep. Parmen.* II. xiii. [29]) says that baptism by a layman, 'if necessity urges, is either no sin or a venial one.' But he appears to be a little doubtful about the matter. The *Statuta Ecclesiæ Antiqua* (can. 100), by saying that 'a woman may not baptize,' probably imply that a man, even if a layman, can do so. Isidore of Seville very grudgingly says that lay baptism is for the most part allowed, but only when a person is *in extremis* (*de Eccl. Off.* ii. 25).

A striking case, which brings in other considerations of importance, occurred in the 4th century. The famous Athanasius is said, when a boy, to have administered baptism in play. This was observed by Alexander, the bishop of the diocese (Alexandria), who, on hearing that the proper words had been used, forbade re-baptism, but administered confirmation. For this story see Sozomen (*HE* ii. 17) and Rufinus (*HE* i. 14); Socrates (*HE* i. 15) alludes to it without mentioning Alexander's action. Whether the story is historic or not, it is instructive as showing that the historians treated lay baptism as an actual and not unusual fact. On the other question, that of 'intention,' Alexander's decision is much more doubtful.

We find that a contrary opinion as to lay baptism was not unknown in the 4th century. Even a deacon is forbidden to baptize in the *Apost. Const.* viii. 28, 46, and so are the laity and minor orders in iii. 10 f., and women in iii. 9; of baptism by women it is said that 'there is no small peril to those who undertake it, for it is dangerous, or, rather, wicked and impious.' The *Ethiopic Didascalia* (§ 13 f.) also negatives lay baptism; this manual is largely derived from the *Constitutions*.

We may notice opinion on this question in later times. In the mediæval West lay baptism was fully and officially recognized and, in cases of necessity, encouraged. Midwives were instructed how to baptize infants when in danger of death. This is the present attitude of the Roman Communion. It was also the attitude of the Church of England in the Middle Ages and down to 1604. Lay baptism was extremely common. The Sarum manual provided for it, as did the English Prayer Books of 1549, 1552, and 1559. The rubrics before the Office of Private Baptism in these three books say that baptism is to be administered by laymen only when 'great need shall compel,' but that, if so, they 'that be present' are to 'call upon God for his grace, and say the Lord's prayer, if the time will suffer. And then one of them shall name the child, and dip him in the water, or pour water upon him, saying,' etc. After the Hampton Court Conference, however, as a concession to Puritan feeling, a change was made in the Prayer Book, and since 1604 only an official minister has been explicitly recognized therein. Yet we notice that in the questions directed in the Prayer Book to be asked at private baptism there is a distinction. First they that bring the child are asked by whom he was baptized, and who was present; then 'because some things essential to this Sacrament may happen to be omitted,' the persons are asked with what matter and words the child was baptized. The implication would seem to be that the status of the baptizer is not one of the 'things essential.' Lay baptism has never been forbidden in England, and has been a continuous custom. Hooker has defended its validity, even if administered by women (*Eccles. Polity*, v. 61 f.; this book was first published in 1597), and his great influence has prevailed, though not quite universally, to this day. The English law-courts (in 1809, Kemp *v.* Wickes, and in 1841, Mastin *v.* Escott; see J. H. Blunt and W. G. F. Phillimore, *Book of Church Law*[8], London, 1899) have upheld the same view.

To the Eastern mind the matter has presented itself in a different way. A Western can distinguish between what is irregular and what is invalid, and is accustomed to the saying 'fieri non debet, factum valet.' But an Eastern makes no such distinction; to him 'irregular' and 'invalid' mean the same thing. Quite irrespectively of the validity of the Western Orders, the question has arisen in the East whether Western baptisms are irregular, and therefore (to the Eastern) invalid. To this question the Russian Church has replied No, and has admitted Western, including Lutheran and Calvinist, baptisms since 1718; but the Constantinople Church has replied Yes. On this very complicated subject see W. J. Birkbeck, *Russia and the English Church*, London, 1895, p. 63 n.

6. The laity in the Church services: churchwardens.—From the earliest times, as it would appear, the laity had a place of their own in the Christian synaxis, or assembly. Putting aside Justin Martyr's description (*Apol.* i. 65–67), which does not help us here, the first account of the arrangements of the synaxis is in the older *Didascalia* (3rd cent.). In this description the presbyters sat on either side of the bishop, the laymen behind the presbyters, and the women behind them, all apparently facing east (ii. 57; Funk, i. 158, 160). In the corresponding passage of *Apost. Const.* (ii. 57; Funk, 159 ff.), the description is somewhat confused, but it would seem that the bishop and his presbyters here sat (at least at the beginning of the Eucharistic service) behind the altar, facing the west. In this account also the laity sat by themselves, the men in one place and the women in another; the young people and the older people sat separately, the younger women, the mothers, the widows, the virgins, and the elder women all having distinct places. In this work the assembly is likened to a ship, the bishop being the commander, the deacons the mariners, the 'brethren' (the laity, see above, § 1) the passengers—a metaphor still carried out in the word 'nave' for the part of the church where the congregation worship. In the *Test. of our Lord* (i. 19), and also in the derived chapters of the *Arabic Didascalia* (§ 35; Funk, ii. 124), the laymen and the

laywomen sit in separate places. For a somewhat later period see W. E. Scudamore, in *DCA* ii. 915[b].

Now, in the Church Orders (*e.g.*, *Didascalia* and *Apost. Const.*, *locc. citt.*; *Test. of our Lord*, i. 34) the deacons are represented as moving about rather than as having seats, and, in the case of several of them, as keeping order in the assembly, watching the doors, and assigning seats to the different classes. But, as time went on, deacons, who, as the Church Orders show, were constantly pressing their claims (Maclean, *Ancient Church Orders*, p. 69), devolved their duties on sub-deacons and members of the minor orders. At a somewhat later date—though it is not easy to say when—lay officials took over these duties of deacons, and received the name of 'church-wardens.' But their duties were not and are not confined to keeping order in church. They are in the present day charged with the supervision of the church fabrics and churchyards, with seating the people, with parochial church finance, and with the relief of the poor. In Lyndwoode's *Provinciale* (15th cent.) they are called *guardiani ecclesiæ*. The English canons of 1603 call them also 'quest men.' Their assistants are called 'sidesmen' (see below, § 8). In England there are ordinarily two church-wardens in each parish, one usually nominated by the rector or vicar, and one by the parishioners, and these are admitted to office by the archdeacon. For a full account see P. V. Smith in the *Prayer Book Dictionary*, p. 205 f.

7. Lay preaching.—It was often discussed in the early ages of the Christian era how far a layman might be allowed to teach or preach in church. The case of the learned Origen (3rd cent.), who was, when still a layman, allowed to do so, caused some misgivings in certain quarters; and J. B. Lightfoot (*Apost. Fathers*, pt. i. 'Clement of Rome,' ii. [1890] 195 n.) remarks that the objections raised in his case show that the practice was rare. Eusebius (*HE* vi. 19), to whom we are indebted for the information, evidently approved of the invitation given to Origen. At the end of the 4th cent. the *Apost. Const.* (viii. 32, near the end) speak approvingly of lay teachers, but the reference is perhaps not to public teaching in church. The *Statuta Ecclesiæ Antiqua* (can. 98) say that a layman may not teach in the presence of the clergy except at their command. The Quinisext or Trullan Council (A.D. 692) decrees that the laity are to be excluded from preaching publicly in religious services (can. 64).

We should gather from the gospel story that among the Jews any layman who had the capacity to give instruction in the synagogue might do so. From the Jewish point of view, our Lord, when He taught in the synagogue service, was a 'lay preacher' (Lk 4^{16-32}). So Paul and Barnabas were invited by the Jewish authorities to speak in the synagogue at Pisidian Antioch (Ac 13^{15}) and elsewhere. And in the early ages of the Church, when charismatic gifts were common, it is probable that the same liberty was frequently allowed. These charismata included 'the word of wisdom,' 'the word of knowledge,' 'prophecy,' and 'interpretation of tongues' (1 Co 12^{8-10}). See, further, J. Wordsworth, *The Ministry of Grace*, London, 1901, pp. 163–166.

There was, however, except among the Montanists and some other sects, a great objection to women preaching. Tertullian, even after he became a Montanist, disliked it; he says:

> 'It is not permitted to a woman to speak in the church, nor yet to teach' (*de Virg. Vel.* 9).

Even the *Test. of our Lord*, which enthusiastically advances the claims of the order of widows, and admits them within the sanctuary in the Eucharistic Service, will not allow them to speak in church (i. 40: 'in the church let her be silent'), though it bids them teach women in private. So the *Apost. Const.* (iii. 6) strongly forbid them to 'teach in church,' and bid them 'pray and listen to the teachers.' The prohibition of St. Paul (1 Co 14^{34}; cf. 1 Ti 2^{12}) was considered conclusive.

8. The laity in councils.—There is a considerable contrast between ancient and modern practice with regard to the position of laymen in ecclesiastical synods or councils. With the growth of the parliamentary conception in the civil State has arisen the organization of corresponding Church Parliaments in which the various orders give a vote on the questions decided, and each has a veto on the decisions of the others. It will be of interest to watch the growth of this conception. In the NT we have the description of two 'councils,' one of which may be called the prototype of the general or ecumenical synods of later days, and the other of the diocesan synods. In Ac 15 we read of a meeting called to discuss a difficult question which had arisen in the Church, whether the Gentile converts to Christianity must keep the Law of Moses—whether, in fact, the only entrance to Christianity was through Judaism. Delegates, including Paul and Barnabas, were sent up to Jerusalem to discuss the question with the 'apostles and elders' (v.[2]), who came together to consider the matter (v.[6]). But others than the apostles and elders were present. The delegates were received not only by them but by 'the church' (v.[4]; see above, § 1), who heard them declare the progress of the gospel. And, when the meeting for discussion took place, 'the multitude' were present (v.[12]). It is not clear what part these 'laymen' took in the proceedings. There was much 'questioning' (ζήτησις) before Peter spoke, and they may have had their share in this. When Paul and Barnabas began to describe the wonderful progress made among the Gentiles, 'all the multitude kept silence' (ἐσίγησε, v.[12]). The aorist would imply that before that they had not kept silence; but whether they had contributed to the debate by speeches or by acclamation does not appear. After Paul and Barnabas had spoken, James, the Lord's brother, who presided over the local church at Jerusalem, summed up the discussion and gave as the finding of the meeting what was clearly the mind of those assembled. Then 'the apostles and the elders, with the whole church,' determined to send chosen men of their own company to Antioch with Paul and Barnabas (v.[22]); but the letter which these 'chosen men' carried ran in the name of 'the apostles and elder brethren' only (v.[23] RV; the AV has a faulty text here). We thus see that laymen (but local laymen, not representatives of other Churches) were certainly present at the Apostolic Council, and perhaps spoke at it, and yet that there was a difference between their position at the meeting and that of the 'apostles and elders' in whose name the decree ran. In Ac 21^{18} we have an assembly more closely resembling a diocesan synod of succeeding ages, which was a meeting for discussion between a bishop and his presbyters—though the term 'diocesan synod' is now often used in a different sense. Paul and his companions (including Luke) came to Jerusalem and conferred with James and his 'elders' on further aspects of the question which had been discussed at the Apostolic Council. It seems that on this occasion no laymen were present.

The impression which one receives from Ac 15 is that the apostles determined to carry with them not only the official ministry, but also the whole Christian community. A similar deduction may be made from Cyprian's famous dictum that from the beginning of his episcopate he had proposed to act only after taking the advice (*consilium*) of

the clergy, and the concurring feeling (*consensus*) of the laity (*Ep.* xiv. [v.] 4, 'To the presbyters and deacons'). But modern ideas have been read into this saying. It has been interpreted as meaning that Cyprian disclaimed the power to take any action unless the laity gave their consent. The Latin word *consensus*, however, has not the same sharply defined meaning as our 'consent'; it conveys no idea of voting or of vetoing. Cyprian very rightly determined to carry his people with him in his episcopal rule, and this is the meaning of his expression *consensus*. That this view is just may be inferred from the fact that, if the dictum meant that the laity had the right to veto the bishop's actions, they would have had a higher position than that of the clergy, who had only the right to give advice (*consilium*).

In the provincial councils of the earlier centuries the bishops were the constituent members. But the essence of conciliar action is publicity, and both clergy and laity were present, often in considerable numbers, not only for their own information, that they might learn from the deliberations of the bishops, but in order that they might give information. Those who were qualified to do so, whether clergy or laymen, were brought or invited to the councils. Athanasius was present at Nicæa, in attendance on Bishop Alexander, though only a deacon (Socrates, *HE* i. 8). Eusebius (*Vit. Const.* iii. 8) says that the bishops brought in their train an immense number of presbyters, deacons, acolytes, and other attendants. Yet there is no record in ancient times of either clergy or laity exercising a veto on the bishops' decisions. Their influence was often great, but it was an indirect influence, one wielded not as an exercise of right by a class or an order, but from the qualification of knowledge and experience. They were called in, *e.g.*, to give advice about the lapsed in Cyprian's day (*Ep.* xvii. [xi.] 3, 'To the people'). See, further, art. COUNCILS AND SYNODS (Christian), vol. iv. p. 186 f.; and A. W. Haddan, in *DCA*, art. 'Council' (i. 481 f.).

The opinion of the latter writer is that, while 'bishops were the proper, ordinary, and essential members of a provincial council,' the presbyters 'as a body were consulted, as of right, down to certainly the 3rd century, and not only continued to be present, but were admitted to subscribe in several instances in later centuries.' But he doubts if 'they ever actually voted in a division'; while deacons and laity were often present and sometimes subscribed decrees, 'no proof at all exists that the laity, and no sufficient proof that the deacons, ever voted individually in actual divisions.'

We may notice here a saying of Hooker. He maintains (*Eccl. Pol.* viii. 451) that 'in all societies, companies, and corporations, what severally each shall be bound unto, it must be with all their assents ratified.' But whatever force such an opinion may have as regards the laws of a voluntary society, in matters of religion it is of very doubtful application; even to the laws of a State it can be applied only by somewhat unsatisfactory explanations. In this case it would appear that Hooker is less 'judicious' than usual.

A difficulty in the relation of laymen to synods arises from the fact that synods have so often had to deal with Christian doctrine. To legislate on doctrine is to exercise the office of teaching, and the laity have not, as a class, been commissioned, as the clergy have been commissioned, to teach, even though individual laymen may have been so commissioned (see § 7 above). Had the synods had to deal only with practical questions of Church organization, no doubt laymen would much sooner have been admitted to take a more active share in them.

An early step towards the more modern idea of a Church Parliament was the organization of the English Convocations (also called synods), in which the clerical representatives of the Lower House have a vote or veto on the decisions of the bishops in the Upper House;[1] for, without the concurrence of both Houses, no decision is an Act of Convocation. It is true that the Convocations were first thus fully organized (in the 13th cent.) for fiscal purposes; but, whatever the purpose, the result has been as stated. The addition of Lay Houses of Convocation, as consultative only, is a quite recent experiment.

Since the Reformation there has been a great movement in the West towards giving the laity an equal voice with the clergy in ecclesiastical synods. In Ireland and the British Colonies the Anglican communities have, as a rule, done this. This is also the case in the Presbyterian Communion, in which ministers and 'elders' are admitted to the General Assemblies on equal terms. It has, indeed, been discussed whether these 'elders' are or are not properly laymen, inasmuch as they have received a certain ordination or commission by laying on of hands. Neither the Church of England nor the Episcopal Church in Scotland has gone so far. The position of the laity in the former has been described above. In the latter the provincial synods are composed of the bishops and representatives of the clergy only, the clergy having a veto on the findings of the bishops, and the bishops on those of the clergy; but no legislation can take place without the representatives of the laity having an opportunity of expressing their opinion upon it, and all matters of business organization are dealt with by the Representative Church Council, in which laymen have at least an equal voice with clergymen. In this system a clergyman accused of an ecclesiastical offence can be tried only by his bishop as advised by his fellow-presbyters in diocesan synod—a sort of jury system; and he has an appeal to the 'Episcopal Synod,' which consists of the whole body of bishops.

In the Roman Catholic Communion the laity have no part, as of right, in synods, though they have sometimes been called in to give advice. In the Eastern Orthodox bodies, as will have been seen from what is stated above (§ 4), laymen have often a very considerable share in ecclesiastical councils of some kinds; but questions of doctrine are reserved for the bishops. In this connexion it may be observed that the difficulty, which has so often been felt in the West, of distinguishing questions which are doctrinal from those which are not doctrinal—for so many fall into both categories, according to the aspect in which they are viewed—does not seem to have troubled the more subtle but less logical East.

In connexion with the summoning of laymen to give evidence before synods, mention may be made of the interesting relic in England and Ireland of 'sidesmen' (in the 1603 canons 'sydemen' or 'sidemen'). It was the custom in the Middle Ages for the bishop to summon to his diocesan synod laymen as *testes synodales*, to bear witness to the moral condition of their parishes. The name 'synodsmen' is thought to have been corrupted into 'sidesmen.' Since the Reformation, however, these lay officials have been merely assistants to the church-wardens, and help to keep order in the church (English canon 90).

LITERATURE.—On the general relation of laity to clergy see J. B. Lightfoot, essay on 'The Christian Ministry' in *Philippians*[4], London, 1878, and many later editions (since reprinted in a volume of essays); C. Gore, *The Church and the Ministry*[4], do. 1900; A. Barry, *The Position of the Laity in the Church*, do. 1903; and W. E. Scudamore, art. 'Laity' in *DCA*. On lay baptism see R. Hooker, *Ecclesiastical Polity*, new ed., Oxford, 1843 ff.; J. Bingham, *Scholastical History of Lay Baptism*, London, 1712 (these two writers are in favour of the practice); W. Elwin, *The Minister of Baptism*, do. 1889; D. Waterland, *Letters on Lay-Baptism*, new ed. by F. N. Oxenham, do. 1892 (these two writers deny or doubt the validity of lay baptism); and T. Thompson, *The Offices of Baptism and Confirmation*, Cambridge, 1914, pt. ii. ch. iii. On the laity in councils see E. B. Pusey, *The Councils of the Church*, Oxford, 1857; A. W. Haddan, art. 'Council' in *DCA* (an exhaustive treatise on the subject); and A. Barry, *op. cit.*

LAKE-DWELLINGS. — The term 'lake-dwellings' (Fr. *habitations lacustres*; Germ. *Pfahlbauten*; Ital. *palafitte*) is a generic expression to designate those singular habitations which certain peoples were formerly in the habit of constructing, chiefly on fresh-water lakes, and the remains of which are at the present time not infrequently disinterred from ancient lacustrine deposits, either along the shallow margins of existing lakes or on the sites of some of the smaller lake-basins which, in the course of time, have been obliterated by the growth of peat. It is only in comparatively recent times that even the existence of such structures has come to the knowledge of archæologists, but practical researches have already abundantly shown that they were at one time common in many parts of the world, especially in Central Europe and in the British Isles. Herodotus (4th cent. B.C.) describes (v. 16) a lake-dwelling community in Lake Prasias, in Thrace, who lived in huts placed on a wooden platform, supported on tall piles, and connected with the shore by a wooden gangway. Each habitation had a trap-door which gave access to the water beneath; and the lake so abounded with fish that a man had only to open his trap-door and let down a basket by a rope into the water, and, on drawing it up in a short time, he would find it full of fish. But this, and a few other historical notices suggestive of the custom of constructing lake-habitations, failed to disclose the archæological treasures which have lain buried for so many centuries in the ancient lacustrine deposits of nearly all the lake-basins of Central Europe. Now the antiquarian materials collected on lake-dwelling sites are so vast and varied that they hold a prominent position in the principal archæological museums of Europe. To have rescued the evidence of so remarkable a phase of human civilization from oblivion is justly regarded as one of the greatest triumphs of pre-historic archæology. In 1890 the present writer described the *terremare* of the Po valley, the *terpen* of Holland and other analogous structures in Hungary and elsewhere, as mere variants of the lacustrine system of habitation, and, as some remarkable discoveries have since been made in these somewhat obscure fields of research, it is desirable to include a brief notice of them in this article as separate sections.

1. **Lacustrine researches.**—Although the discovery of the remains of pile-structures in Lake Zürich during the winter of 1853–54 is generally regarded as the starting-point of lacustrine archæology, we are not without valid evidence to show that analogous structures, though not so ancient, were known in Ireland fifteen years earlier. It seems that in 1839 curiosity was roused at the Museum of the Royal Irish Academy by the frequency of the visits of a local dealer offering for sale objects of a miscellaneous character, many of which were of rare antiquarian value. These objects were said to have been found in a peat-bog in County Meath, and their assortment in such a place seemed so strange to the Museum authorities that G. Petrie and W. R. Wilde determined to visit the locality. On this expedition they were conducted to the peat-bog of Lagore, near the village of Dunshaughlin, where, within the boundaries of a drained lake and under a thick covering of peat, was an artificial mound then partially exposed by peat-cutters. It seems that this mound had been well known to bone collectors for upwards of ten years; during that time they had dug out and exported to a factory of bone-manure in Scotland no fewer than 150 cart-loads of bones.

The mound was 520 feet in circumference and along its margin were 'upright posts of black oak, measuring from 6 to 8 feet in height; these were mortised into beams of a similar material laid flat upon the marl and sand beneath the bog, and nearly 16 feet below the present surface. The upright posts were held together by connecting crossbeams, and (said to be) fastened by large iron nails.'

An abstract of a paper by Wilde on the Lagore 'find,' from which the above extract is taken, was published in the *Proceedings of the Royal Irish Academy* for 1840, and its contents were so suggestive to local antiquaries that almost immediately several other sites were recognized as island-forts, or *crannogs* (the name given to such structures in the Irish annals). Moreover, during the workings of the Commission of the Arterial Drainage and Inland Navigation of Ireland, no fewer than 22 *crannogs* were brought to light throughout the counties of Roscommon, Leitrim, Cavan, and Monaghan. Reports of these discoveries by the engineers of the Board of Works, with plans, maps, sections, and a large assortment of relics, were deposited at the time in the Museum of the Royal Irish Academy.

The fortuitous circumstances which led to the discovery of the pile-structures (*Pfahlbauten*) of Switzerland are so well known that it is hardly necessary to dwell on them here. It appears that, owing to the lowness of the water in Lake Zürich during the winter of 1853–54, two of the inhabitants of Ober-Meilen, whose vineyards in ordinary times came close to the water in the lake, began to extend their limits by enclosing portions of the exposed shore with a stone wall and filling in the space with the adjacent mud. In course of these operations they came upon the decayed stumps of wooden piles, stone axes, flint implements, and various worked objects of horn and bone, which excited some curiosity among the workmen. J. Staub (*Die Pfahlbauten in den Schweizer-Seen*, Fluntern, 1864, p. 8) informs us that the village schoolmaster, Herr Aeppli, having seen some of the objects with his pupils, went to inspect the locality, and was so impressed with the importance of the find that he sent a brief statement of the facts to the Antiquarian Society at Zürich. Within four hours of the dispatch of his epistle three representatives of the Society arrived at Ober-Meilen, among them being the president, Ferdinand Keller. After careful consideration of the facts, Keller came to the conclusion that originally the piles had supported a platform upon which huts had been erected; that these huts had been inhabited by an industrious population, who were the owners of the stone axes and the other primitive relics disinterred from the mud; and that the lacustrine village had come to an untimely end by a conflagration which destroyed the entire structures down to the water edge.

News of the discoveries at Ober-Meilen spread rapidly among the Swiss people, with the result that an army of explorers immediately began to search for similar remains in other lakes. Guided partly by traditional stories of submerged cities long current among the fishing community, and partly by the knowledge of local fishermen, who, from practical experience of disasters to their nets, could at once point to numberless fields of submerged woodwork, the efforts of these pioneer *lacustreurs* were speedily crowned with success. Keller's first report on the Swiss lake-dwellings, which appeared towards the close of 1854 under the title of 'Die keltischen Pfahlbauten in den Schweizerseen,' at once brought this singular mode of human habitation prominently before the scientific world.

To dredge the bed of a lake with hand-worked appliances in a small boat was a slow process, always expensive, and often unproductive. Yet such was the enthusiasm with which that kind of work was carried on year after year by the Swiss antiquaries that there is scarcely a Cantonal

Museum in the country but contains a valuable collection of lacustrine relics secured in this way. In the course of time, these prosaic methods were powerfully supplemented by the prosecution of various kinds of public works, such as drainage operations, the deepening of harbours, the construction of railways, jetties, etc. Of exceptional importance among such incidental works was the completion of the gigantic operation known as the 'Correction des Eaux du Jura,' which embraced the deepening of the entire waterway of the Jura valley, from the junction of the Lower Thièle with the Aar to the outlet of the Broye at Lake Morat, the result of which was to lower the surface of the lakes of Bienne, Neuchâtel, and Morat from 6 to 8 feet. The permanent effect of these works on the Jura lakes, especially Lake Neuchâtel, was very marked—harbours, jetties, and extensive tracts of shoreland being left high and dry by the subsiding waters. This was the harvest time of archæology. Many of the sites of lacustrine villages became dry land and were visited by crowds of eager relic-hunters; even fishermen forsook their normal avocation, finding it more profitable to fish for pre-historic antiquities.

Another illustration of how public works were utilized for the advancement of archæology was the construction of the splendid bridge which now spans the Limmat at its outlet from Lake Zürich, and the laying out of the adjacent promenades, gardens, and ornamental quays, which occupy what was formerly part of the lake. The filling up of this large area necessitated the use of dredgers, by means of which gravel and mud were raised from the most convenient shallows along the shore and transported as required. Among the localities selected for these operations were the 'Grosser Hafner' and the outskirts of the Bauschanze. The rich loamy deposits of the 'Haumessergrund' at Wollishofen were found to be a suitable soil for the floral gardens. All these localities turned out to be the sites of lake-villages, and yielded an enormous amount of industrial remains of all ages. Indeed, the collection of Bronze Age relics from Wollishofen now deposited in the Antiquarian Museum at Zürich is one of the most valuable hitherto brought to light through lake-dwelling researches.

It is not necessary to notice the successive investigations which have been made throughout Europe in consequence of the publicity given to these discoveries in Switzerland. Suffice it to say that systematic explorations on an extensive scale have conclusively shown that lake-villages, generally in the form of pile-structures, had been prevalent during the Stone and Bronze Ages in the sheltered bays of nearly all the lakes of France, Switzerland, S. Germany, Austria, and N. Italy. More recently the area of their distribution has been extended to Bosnia, Greece, Asia Minor, and probably other localities.

The remarkable development of lake-dwellings during the pre-historic ages in Central Europe seems to have come to a sudden end in the early Iron Age, and so completely had the system fallen into desuetude that scarcely a trace of it has survived in the local traditions of the districts in which such dwellings were most numerous. The habit of constructing houses built on platforms supported on piles is not, however, absolutely confined to pre-historic times, for we find from various books of travel that such habitations are still prevalent in various parts of the world—*e.g.*, in the Gulf of Maracaibo, the mouths of the Orinoco and Amazon, on the Coasts of New Guinea and Borneo, at Singapore, along the creeks and harbours running into the Straits of Malacca, etc. V. L. Cameron (*Across Africa*, London, 1877, ii. 63) describes three villages in Lake Mohrya, in Central Africa, with drawings of their picturesque appearance as seen from the shore. A. Goering (in *Illustrated Travels*, London, 1869–75, ii. 19–21) gives an account of a visit which he paid to the pile-dwellers of a tribe of Goajiro Indians in the neighbourhood of the town of Maracaibo, from which the following extracts may be interesting:

'In this way we reached the Goajiro village. Here a lively scene presented itself. The houses, with low sloping roofs, were like so many little cock-lofts perched on high over the shallow waters, and they were connected with each other by means of bridges, made of narrow planks, the split stems of palm trees. . . . Each house, or cock-loft, consisted of two parts, the pent-roof shelter being partitioned off in the middle; the front apartment served the double purpose of entrance-hall and kitchen, the rear apartment as a reception and dwelling chamber, and I was not a little surprised to observe how clean it was kept. The floor was formed of split stems of trees, set close together and covered with mats. Weapons and utensils were placed in order in the corners.'

Access was got to these villages from the shore by dug-out canoes, the inhabitants mounting to their 'cock-lofts' by a notched tree-trunk, which served as a ladder. Goering states that such villages are numerous along the shores of the great 'Lake,' or Gulf, of Maracaibo. 'The piles on which they rest are driven deep into the oozy bottom, and so firmly do they hold that there is no shakiness of the loftily-perched dwelling perceptible, even when crowded with people.'

Pile-structures are still more numerous in the east Indian islands. J. S. C. Dumont d'Urville (*Voyage de découvertes autour du monde*, Paris, 1836) describes the inhabitants of the bay of Dorei as living on four groups of pile-villages, each containing from eight to fifteen houses entirely constructed of timbers. Some of these houses have a double row of cells or cabins, separated by a passage which runs from end to end, and give accommodation to several families.

As early as 1860, F. Troyon (*Habitations lacustres*) quotes from the books of a number of travellers recording the existence of pile-structures in nearly all parts of the world; but little further information is to be derived from this class of evidence.

The discovery of an older lacustrine civilization in Switzerland was hailed by Irish antiquaries with the greatest enthusiasm, for it was only then that the significance of their own *crannogs* came to be fully realized; and henceforth *crannog*-hunting was pursued with renewed vigour. The Irish annals were now carefully searched for references to *crannogs*, and many of the localities thus indicated were identified and partly explored. In 1857 Wilde published the first part of his well-known catalogue of the antiquities in the Museum of the Royal Irish Academy, in which he gave an excellent account of the *crannogs*. In it he states that 46 were known up to date, and predicts that many more would come to light as the drainage of the country advanced—a prediction which has been amply verified, as every succeeding year has seen an increase to their number. Now the total number of Irish *crannogs* known and more or less explored is upwards of 200.

In 1857 Joseph Robertson read a paper on Scottish *crannogs* at the Society of Antiquaries of Scotland. The chief facts adduced by him consisted of historic references to island-forts, and submerged wooden structures exposed in the course of the drainage of lochs and marshes during the last two centuries. The first great discovery, however, which brought the subject on the field of practical research in Scotland, was made in the Loch of Dowalton, Wigtownshire, upwards of fifty years ago. In order to drain the extensive meadows occupying the western portion of the Dowalton valley the proprietor, William Maxwell, conceived and successfully carried out a project of draining the loch by cutting a new outlet through a narrow lip of rock which separated its waters from the lower grounds beyond. This excavation was completed during the summer of 1863, and, as the waters subsided, a group of five or six artificial islands gradually emerged from the bosom of the lake. The antiquarian remains collected on these islands ultimately disclosed a picture of early Scottish civilization hitherto unknown.

A descriptive account of the Dowalton *crannogs* was read by the Duke of Northumberland (then

Lord Lovaine) at the meeting of the British Association held at Newcastle-on-Tyne in 1863.

Two years later J. Stuart, secretary of the Society of Antiquaries of Scotland, visited Dowalton, and, owing to the more complete drainage of the loch, was enabled to examine the islands under more favourable conditions. The result of his labours was an elaborate paper to the Society (1866), in which he gave a detailed account of their structure and of the relics found on them.

The discovery and excavation of the Lochlee *crannog* (1878–79) was the beginning of a series of explorations, conducted under the auspices of the Ayr and Galloway Archæological Association, which culminated within a few years in the excavation of about half a dozen typical *crannog* sites throughout the counties of Ayr and Wigtown. The assortment of relics recovered from their débris indicates the range of their occupancy to have extended from the Romano-British period down to mediæval times. Since the publication of the reports on these excavations three other typical *crannogs* have been investigated in Scotland, viz. one in Lochan Dughaill, Argyllshire, one at Hyndford, near Lanark, and one in Ashgrove Loch, near Stevenston, Ayrshire. The Hyndford *crannog* is of special interest on account of the number of objects belonging to Roman civilization which were among its relics.

Until the discovery of the Glastonbury lake-village, in the spring of 1892, by Arthur Bulleid, the recorded indications of lake-dwellings south of the Scottish border are too meagre and fragmentary to call for any notice in this sketch. The excavation of the Glastonbury settlement has been in progress since its discovery, and is now completed. Its site occupies some 3 or 4 acres of flat meadow-land, within the boundaries of what is justly supposed to have been formerly a marshy lake. Before excavations were begun, all that the eye could discern was a group of low mounds huddled in the corner of a field. These mounds turned out to be the sites and débris of dwelling-huts resting on a foundation of layers of brushwood and the stems of small trees. These under-structures were sometimes bound together with transverse mortised beams, precisely similar to those so commonly met with in the Scottish and Irish *crannogs*. A thick palisading of piles and brushwood surrounded and protected the village. Its marginal boundary was very irregular, probably owing to the fact that enlargement of the original area of the village had been subsequently made by the addition of huts projecting from its sides. The huts were circular or slightly oval, and varied in size from 20 to 35 ft. in diameter. Each hut contained a central hearth, sometimes neatly made of flat stones embedded in the clay flooring which existed in all of them; and, as subsidence, due to the compression and decay of the under-structures, progressed, the occupants superadded new clay floorings, which on section showed a well-marked stratified appearance. Several hearths, five or six not being an unknown number, were thus observed to have been superimposed one above the other—precisely as was the case on the Lochlee *crannog*.

The relics collected on the site of this remarkable lacustrine village are so numerous and varied that they illustrate, with rare and singular completeness, the life-history of the community who inhabited it. They exhibit the special characteristics of 'Late Celtic' art, as it existed prior to the spread of Roman civilization in that part of Britain; and it is this fact that gives the Glastonbury collection an exceptional importance among the antiquarian remains hitherto discovered within the British Isles.[1]

[1] Within the last few years another lacustrine village has been discovered at a place called Meare, about two miles from Glastonbury, and is now in the course of being excavated during each summer. So far, both the structural and cultural relics disclosed at this new site are precisely similar to those of the Glastonbury village.

2. Structure of lake-dwellings.—It will be understood from the foregoing remarks that the structural details of lake-dwellings have to be gathered more or less from different, and sometimes widely separated, settlements, and re-constructed on the principles of comparative archæology. As regards the pile-structures of the Stone and Bronze Ages, everything—huts, platforms, and even the submerged piles, except their lower ends—has disappeared ages ago, either from natural decay or by conflagrations. The complete destruction of a lake-village by fire was by no means a rare catastrophe, and, strange to say, it was, from an archæological point of view, the most fortunate termination that could have happened to it. During the bustle and scrimmage consequent on the conflagration of such combustible materials not only did many articles of value drop into the water beneath, but some of the most perishable commodities, such as grain, fruits, bread, cloth, portions of the clay mouldings which covered the cottage walls, etc., were more or less charred before being deposited in the lake-silt—a condition which rendered them less liable to decomposition. It is by collecting, assorting, and comparing such fragmentary materials that archæologists are enabled to form some idea of the appearance and internal structure of these lacustrine villages, as well as of the culture, civilization, and domestic economy of their inhabitants.

The preliminary problem which had to be solved before habitable huts of any kind could be erected was the construction of a level platform, sufficiently elevated above the surface of the water to place the dwelling-huts beyond the action of the waves and floods. The methods adopted to secure this end may be briefly described.

(*a*) One method was by driving long piles of wood into the bed of the lake, leaving their tops projecting at a uniform height above the water, and then placing over them transverse beams with mortised holes, into which the tops of the piles were fitted—thus forming a platform capable of supporting human habitations, and, of course, varying in size according to the requirements of the community. That the earliest lake-dwellers had the requisite skill to accomplish such work is established beyond doubt by the discovery among the débris of nearly all the stations of mortised beams, tenons, portions of wood containing both round and square holes, together with a various assortment of wooden implements, vessels, etc. A common method of steadying the piles was to throw around them after being placed in position large quantities of stones. The stones were transported from the adjacent shore in canoes, one of which, still containing its load, was actually observed buried in the mud off the Ile de St. Pierre, in Lake Bienne, where it had evidently been swamped. These extensive collections of stones formed here and there a kind of submerged mound, which from time immemorial was locally known as a *Steinberg*. One or more of these *Steinbergs* have been found on almost all the sites of the pile-villages of the Stone Age. The long straggling settlement at Schaffis contained three, the largest measuring 217 ft. in length by 65 ft. in breadth. The fishermen, in order to prevent injury to their nets, were in the habit of pulling up these piles; and so abundant were they in the three great lakes known as the 'Jura waters' that they had become the source of a small industry among cabinet-makers, who had long recognized the valuable properties of the black oak for the manufacture of ornamental articles. A more striking appearance has rarely been seen than that which the stations of Möringen and Lattringen presented shortly after Lake Bienne became affected by the operations of the 'Correction des Eaux du Jura.' Photographs then taken show quite a forest of black stumps rising a few feet above the muddy bottom which then, for the first time, became exposed to view.

It is estimated that the actual number of piles used in the construction of some of the larger settlements was not far short of 100,000. One of the stations at Morges, in the lake of Geneva, was 1200 ft. long and 150 ft. broad; and the whole of this area was thickly studded with the stumps of the piles which formerly supported the village. E. von Fellenberg calculated, by counting the number of piles in one or two selected localities, that the entire number requisite for the Bronze Age settlement at Möringen could not have been less than 10,000.

In the construction of the earlier villages the piles were simply round stems of trees, but latterly, apparently for the purpose of economizing the wood, they were split into two and

sometimes into four portions—a structural feature said to be characteristic of the Bronze Age. It may also be noted that, when a Stone Age site continued in occupation during the Bronze Age, the débris of the latter settlement lay invariably on the outside of the former, showing that with the use of metal tools their constructors were enabled to plant the piles in deeper water. During the Stone Age the woodwork had been manipulated by stone implements—a fact which was clearly demonstrated by Keller on the occasion of the first discovery of the kind at Ober-Meilen. Here some of the piles, on being freshly pulled up, were observed to have their tips pointed by blunt implements, and it was experimentally ascertained that the cuts on them could be closely imitated by using the stone axes which were picked out of the surrounding mud.

(*b*) A second method by means of which lake-dwellers secured an adequate basis for their huts was to construct a series of rectangular basements of wood a few feet apart, each basement having its sides formed by a succession of horizontal beams lying one above the other, like the logs in a Swiss châlet. The ends of the beams overlapped for a few feet, and at the four crossings a few uprights were placed, apparently for the purpose of steadying the structure. These compartments varied in size from a few feet in diameter to as many yards. The lowest beams rested on the bed of the lake, and, when the requisite height above the water was reached, transverse beams to form the habitable platform were laid across, thus covering up the empty spaces underneath. This plan, which was probably selected for the purpose of saving the structural materials, may be regarded as analogous to the vaulted foundations of modern houses. Examples of such structures have been found in Lake Paladru in France (Merovingian period) and in the lakes of Persanzig, Arys, Daber, and in a few other sporadic lake-dwellings of the Iron Age in N. Germany.

(*c*) Contemporary with the pre-historic pile-structures already noticed, there existed throughout the same regions of Central Europe certain lake-dwellings which, instead of platforms supported on piles, had solid sub-structures composed of closely set timbers arranged in horizontal layers and often alternating with beds of clay. Such structures were commonly erected in the smaller lakes, and their remains are now generally embedded in peat. Characteristic specimens of this class belonging to the Stone Age have been investigated at Wauwyl, Niederwyl, Schussenried, and a few other localities. An artificial island in the lake of Inkwyl, near Soleure, was shown by C. A. Morlot to have been originally a pile-structure which at a later period had become consolidated into an island by the gradual accumulation of the débris of a lengthy habitation. Another in Lake Nussbaumen is, according to Morlot, surrounded by a circle of piles, after the manner of the Scottish and Irish *crannogs*. It has also been proved that the prettily wooded Isola Virginia in Lake Varese, though now about three acres in extent, was originally a pile-structure. At present it contains several buildings, one of which is a valuable archæological museum erected by the proprietor, Ettore Ponti.

It was, however, within the British Isles that the artificial islands, or *crannogs*, acquired their greatest development. Precise information as regards their structure has been supplied by an exhaustive investigation of a few Scottish specimens, notably those at Lochlee and Buston, in the county of Ayr, the result of which may be briefly summarized as follows.

A suitable locality having been selected—the topographical requirements seem to have been a small mossy lake with its margin overgrown with water-plants—the next consideration was the selection of materials for constructing the island. In a lake bed composed of many feet of decayed vegetable matter it is manifest that heavy substances, such as stones and earth, would be inadmissible, owing to their weight, so that solid logs of wood in the form of trunks of trees would be the best material that could be used. The plan adopted seems to have been to make in the first place a floating raft of tree-stems, brushwood, heather, bracken, etc., with which were mingled stones and earth. On this basis they continued to add similar materials until the mass grounded. It was then surrounded with a stockade in the form of one or more circles of piles united by intertwining branches, or, in the more elaborately constructed specimens, by horizontal beams with mortised holes to receive the ends of the piles. These horizontal beams were arranged in two ways. One set ran along the circumference and bound together all the uprights in the same circle, while others took a radial direction and connected each circle together, some of these radial beams being long enough to bind the uprights in three circles together. The mechanical skill displayed in the construction of these stockades was specially directed to give stability to the island, and to prevent superincumbent pressure from causing the general mass to bulge out laterally.

The internal structure of the Lochlee island was carefully ascertained by cutting a large rectangular hole near its centre down to the original silt of the lake—a depth of some 10 ft. from the lowest floor of the dwelling-house, or about 16 ft. from the original surface of the mound. The result of this was to show that nearly the entire mass was composed of the unbarked stems of various kinds of trees, from 6 to 12 ins. in diameter, laid in transverse layers one above the other. Interspersed here and there among the woodwork were some long slender oak planks, which appear to have formed a binding framework between the central parts of the island and its margin. One such beam, on having its attachments traced out, was found to have its inner end pinned by a long wooden peg to an adjacent large tree-stem, while its outer end was pinned to another slender oak plank which extended outwards and was similarly attached to the marginal structures.

Some of these *crannog* islands in Scotland and Ireland had been constructed of stones with or without a wooden foundation. According to G. H. Kinahan, the largest and most typical example of the stone *crannog* in Ireland is Hag's Castle, Lough Mask, Co. Mayo. As a Scottish example may be cited a mound on the margin of the White Loch of Ravenstone, Wigtownshire, explored a few years ago by Lord Borthwick and the present writer. It turned out to be a mass of stones, presenting a level surface of about 80 ft. in diameter and 6 or 7 ft. thick, resting on a foundation of large beams. On the surface of this mound were the foundations of stone buildings divided into five compartments.[1]

Most of the pile-structures of Central Europe had been connected with the shore by one or more gangways, supported on a double row of piles, with dimensions varying according to the requirements of each village. E. von Fellenberg informs us (Keller, *Lake-Dwellings*, p. 181 f.) that the bridge leading from the shore to the Bronze Age settlement of Möringen was about 200 yards in length, and nearly 20 ft. in width, while that to the Stone Age settlement in the same locality was considerably shorter, and only 5 to 8 ft. wide. The area occupied by piles at Robenhausen extended to about 3 acres, and the nearest point of the old lake shore was some 2000 paces distant; but yet, from traces of piles found in the peat, it would appear that a wooden bridge traversed the whole of this distance. Remains of similar approaches have occasionally been discovered in connexion with the later dwellings of the Iron Age, both in N. Germany and in the British Isles. Some of the Scottish and Irish *crannogs* were also accessible by a submerged stone causeway, the existence of which had become known in some instances only upon the drainage of the lake. It has been conjectured that such submerged approaches might have been intentionally constructed so as to supply to the initiated a secret means of escape in emergencies—an idea strengthened by the zig-zag direction presented by some of them, such as a stone causeway in the Loch of Sanquhar. Other *crannogs*, however, appear to have been completely insulated and accessible only by boats. The frequency with which canoes have been disinterred from the débris of lake-dwellings of all ages shows how prevalent and widely distributed was their use as a means of communication with the shore. These primitive boats, whether emanating from a Swiss *Pfahlbau* or from a mediæval *crannog* of the British Isles, were almost invariably dug-outs, and presented no special feature either in form or in structure by which their age or provenance could be determined.

The evidential data, on which our knowledge of the structure of the actual habitations of the lake-

[1] During the last few years a preliminary survey of the artificial islands in the Highland lochs, preparatory to excavating the more promising sites, has been completed by F. Odo Blundell of St. Benedict's Monastery, Fort Augustus, under the auspices of a Committee of the British Association. Several interesting reports have already been published by the Association, as well as in the *Proceedings of the Society of Antiquaries of Scotland*. For the year 1914 a small grant has been obtained from the Carnegie Research Fund towards the expense of investigating the artificial island in the Loch of Kinellan, Ross-shire.

dwellers is founded, consist of portions of burnt clay mouldings, the position of hearths and culinary implements, traces of walls and partitions, the disposition of food refuse, etc. The inference from the clay castings is that the timbers which formed the walls of the huts had been placed close together in an upright position, and then plastered over with puddled clay. Burnt clay impressions found at Robenhausen indicated timbers about an inch and a half in diameter, but other fragments indicated merely a kind of wicker-work. It may be noted that clay mouldings found in Lake Bourget, supposed to have been portions of the ceiling of a room, were ornamented with concentric circles and parallel lines. Other burnt fragments from the same locality were portions of the funnel of a small furnace or stove.

As to the form of the huts archæologists are divided in opinion, some, in their ideal restorations, figuring them as circular, and others as rectangular. F. Troyon, judging from some clay casts found at Wangen, came to the conclusion that they were circular, and, accordingly, figures them as such in his *Habitations lacustres*. On the other hand, E. Frank, the investigator of Schussenried, came upon the foundations and portions of the walls of a cottage embedded in peat. The structure was rectangular, measuring 33 ft. in length and 23 ft. in breadth, and was divided into two compartments by a partition. The walls and partitions were constructed of split stems of trees set upright, and plastered over with clay. On the south side there was a door, a little over 3 ft. wide, which opened into one of the chambers. The flooring of both these chambers was composed of four layers of closely laid timbers separated by as many layers of clay. These repeated floorings may have been necessitated by the gradual rise of the surrounding peat, which ultimately compelled the inhabitants to abandon the dwelling altogether.

The diameter of the circular area enclosed by the stockades at Lochlee was about 60 ft., and in its central portion there was a space, measuring 39 ft. square, paved with closely laid beams like railway sleepers, and along each of its sides were the stumps of posts, apparently the remains of a wooden wall. A row of similar stumps divided the paved area into two compartments. Five or six superimposed hearths occupied the middle of the northern compartment, and the doorway, clearly defined by portions of two stout posts, was situated on the south side, while facing it on the left was an immense refuse heap, beyond which were the remains of a gangway connecting the island with the shore. On the other hand, the structural remains on the Buston *crannog* indicated one large circular dwelling-house, a form of habitation which was also disclosed by the excavation of the *crannog* in Lochan Dughaill. We have already seen that the huts of the Glastonbury lake-village were more or less circular. It may, therefore, be inferred that both forms were indiscriminately used by the lake-dwellers not only during the prehistoric period, but also during the subsequent ages in which such structures were in vogue.

On the pile-structures proper the hut floor was made of clay mixed with rushes, and over this was placed the hearth, which consisted of a few flat stones embedded in clay. From discoveries made at Niederwyl, Jacob Messikommer (Keller, *Lake-Dwellings*, p. 73) concluded that the roofs of the huts in that settlement were thatched with straw and rushes. That thatch of some kind was used in Western Europe in proto-historic times finds some corroboration in the writings of classical authors.

Thus, Strabo (IV. iv. 3) writes that the Belgæ lived in 'great houses, arched, constructed of planks and wicker-work, and covered with a heavy thatched roof'—a description which correctly applies to many of the Scottish *crannogs*.

3. **Culture and civilization of the lake-dwellers of Europe.**—There is no class of antiquities which gives greater support to the general accuracy of the chronological sequence of the so-called three ages of Stone, Bronze, and Iron than the various collections of lake-dwelling remains which are to be seen in the archæological museums of Europe. Founded in the Stone Age, these pile-structures continued to flourish during the whole of the Bronze Age, and even overlapped into the early Iron Age, so that the period of their duration entirely covers the introduction and development of bronze into Middle and Western Europe. It is beyond doubt that from the very start the lake-dwellers were acquainted with, and sedulously practised, various arts and industries, that they reared most of the ordinary domestic animals, and that they cultivated the growth of flax, fruits, and various kinds of cereals.

Several varieties of cloth, fringes, nets, cords, and ropes were brought to light by Messikommer from the very lowest relic-bed at the Stone Age station of Robenhausen; and even specimens of embroidery were found at the adjoining station of Irgenhausen. Remains of linen cloth, thread, nets, basket-work, etc., have also been found on many other stations, as at Vinelz, Locras, Schaffis, Lagozza, Laibach, etc. The absence of such fragile relics from other stations is not to be taken as evidence that their inhabitants were unacquainted with such industries; for it is only when fabrics are carbonized, or deposited in circumstances exceptionally favourable to their preservation, that they resist for a prolonged period the process of natural decay. Thus, at Schussenried, though there was no actual specimen of cloth found, the impression of a well-woven fabric was clearly visible on a consolidated mass of wheat—probably that of the sack in which the grain had been stored. At Laibach, a similar impression was observed on a fragment of pottery. In the museum at Freiburg (Switzerland) there is a carbonized spindle from Lake Morat, which shows fine threads still coiled round it; and Gross figures a similar object from Locras.

One of the stations at Moosseedorf-See, which was carefully investigated by the experienced archæologists Jahn, Morlot, and Uhlmann, yielded a large assortment of the osseous remains of animals, among which the following were supposed to have been in a state of domestication: dog, sheep, goat, pig, and various kinds of oxen. A few bones and teeth of the horse were also found, but these might have belonged to the wild species, as it is not agreed that this animal was domesticated till the Bronze Age. The cultivated plants recorded from this station were barley, two kinds of wheat, pea, poppy, and flax. At Wangen two varieties of wheat and the two-rowed barley were distinctly recognized both in whole ears and as detached grain—the latter in quantities that could be measured in bushels.

That the ceramic art was well known to, and practised by, the early lake-dwellers is amply proved by the quantity of pottery, mostly fragmentary, indicating bowls, plates, cups, jugs, spoons, and large vessels, now stored among lacustrine relics in the various museums throughout Europe. These vessels were made without a knowledge of the potter's wheel, and the paste frequently contained coarse sand or small pebbles; but a finer kind was also used for the manufacture of smaller vessels. Generally speaking, they were coarsely made in the earlier stations, having perforated knobs instead of handles; yet examples are occasionally found which show that handles

were not unknown. The ornamentation consisted of finger- and string-marks, irregular scratchings with a pointed tool, raised knobs, and perforations round the rim, together with dots and lines variously combined.

For the prosecution of the ordinary avocations of social life the lake-dwellers were in possession of a varied assortment of tools and implements, the precise function of some of them being, however, difficult to determine. They used axes, knives, saws, scrapers, borers, etc., of flint and other hard stones. Cutting instruments, pointers, chisels, etc., were also made of horn, bone, and the tusks of the wild boar. With such tools they constructed wooden houses, scooped out canoes, and shaped wood into various kinds of dishes, clubs, and handles.

The food supply derived from agriculture and the rearing of domestic animals was supplemented by the produce of hunting, fishing, and gathering such seeds and fruits as nature produced in the vicinity. The weapons and tools used in these pursuits are abundantly met with. Arrow- and spear-points of flint, and sometimes of rock-crystal and jade, or other mineral, and of bone, are common among lake-dwelling remains; and even a few of the bows made of yew wood, notwithstanding their liability to decay, have come to light—two from Robenhausen, and one from each of the stations of Vinelz, Sutz, and Clairvaux.

The introduction of cutting implements of bronze into general use among the lake-dwellers gave a great impulse to the advancement of all the industries and ordinary affairs of life. In lieu of the primitive weapons and tools previously in use, we now meet with a splendid array of swords, daggers, lances, axes, knives, razors, chisels, gouges, sickles, etc., all made of the new material. The simple dagger of bone or flint, which could be used only by a thrusting blow, not only became more effective, but developed into a new weapon—the double-edged sword. Indeed, all weapons, implements, and ornaments underwent more or less evolutionary improvements, the various stages of which can be readily traced by a comparison of extant specimens. Thus, the primitive stone axe at first retained the same form in bronze, and, as such, had a wide distribution throughout Europe; but it gradually succumbed to the flanged type, with or without a loop, till finally all forms gave way to the socketed implement, which appears to have been regarded as the best form of axe prevalent in the Bronze Age. It was only when iron superseded bronze in the manufacture of cutting implements that the modern type of axe, *i.e.* with a transverse socket, came into general use.

In the category of ornaments and articles of the toilet there falls to be considered a large assortment of new and fanciful forms, such as bracelets, pendants, necklaces, fibulæ, pins, combs, belt-clasps, finger-rings, buttons, studs, ear-rings, chains, and a few trinkets of gold, amber, and glass.

That the horse was in a state of domestication among the lake-dwellers during the Bronze Age we have very circumstantial evidence, in the discovery of bridle-bits and various ornaments for harness, as well as a wheel and other mountings of a carriage.

These progressive innovations in domestic and public life could hardly fail to influence the art of the potter. Accordingly, we meet with a better quality of paste, greater variety and elegance in the style and form of vessels, and some approach to systematic decoration. Ultimately colouring materials were utilized, which considerably enhanced the effect of the geometric style of ornamentation. Besides patterns of recurring figures, formed by impressions in the soft clay, we occasionally find similar patterns traced on the surface of vessels in thin strips of tin-foil made to adhere to the dish by means of a kind of gum or asphalt. Such vessels were made of fine black paste, with a smooth surface, and were extremely elegant in shape.

Lacustrine archæology does not supply the materials requisite for a review of the culture and civilization prevalent in the early Iron Age, as no lake-dwellings have been discovered showing a transition in the manufacture of bronze and iron objects. Iron appears in a few instances, towards the close of the Bronze Age, as in ornamental bands encrusted on a few swords and bracelets, but there are no tools or weapons of the transition stage, such as was the case at Hallstatt, where iron is seen, as it were, competing with bronze in the manufacture of all kinds of objects. On the contrary, the few objects of iron found on the sites of one or two of the Swiss lake-dwellings are mostly La Tène types, which, of course, are very different, not only in material, but in form and technique, from those of the previous age. On these stations not only were iron objects of La Tène forms found, but also Roman tiles, pottery, and coins. The introduction of iron into general use in Europe seems, therefore, to have been the work of an alien people who subjugated the lake-dwellers and destroyed their villages. On the other hand, the sporadic lake-dwellings found outside the area of these earlier habitations belong almost exclusively to the Iron Age, and their respective inhabitants had no common bonds of affinity. The vast majority of the Scottish and Irish *crannogs* flourished from the Romano-British period down to the 17th cent.—a statement which, according to R. von Virchow ('Die Pfahlbauten des nördlichen Deutschlands,' *ZE* i. [Berlin, 1869]), is applicable to their analogues in N. Germany.

The well-known station of La Tène, regarded by the earlier *lacustreurs* as a true lake-dwelling of the Iron Age, is now shown to have been an *oppidum*, or fort, of the Helvetians, erected at the outlet of the lake when its waters stood at a lower level than they did immediately before the 'Correction des Eaux du Jura.' The remarkable assortment of weapons, implements, and ornaments collected from this site gives a striking picture of the metallurgical skill to which their owners had attained prior to the influence of Roman civilization in Gaul. The style of art disclosed by them seems to be closely allied to that known in Britain as 'Late Celtic,' as represented, *e.g.*, by the relics found on the Glastonbury lake-villages; and so important is this group considered by archæologists that the name 'La Tène' has become a generic expression for those well-defined Marnian remains which are Celtic in origin, and are not to be confounded with those classified as Greek, Roman, Etruscan, or Phœnician.

4. Terremare.—Shortly after the middle of the 18th cent. certain artificial mounds of an earthy substance found scattered here and there over some of the eastern provinces of the Po valley became known to agriculturists as possessing great fertilizing power—a property which was henceforth turned to account by using their contents as a field manure. To such an extent has this practice been carried on that, out of about 100 sites then known, few now remain. On the removal of a few feet of surface soil the fertilizing materials come to view in the form of stratified deposits of clay, sand, ashes, etc., of various colours—yellow, brown, green, and black—shown conspicuously on section as parallel bands running across the mound. The finer materials, procured by riddling, are sold to the farmers under the name *marna* or *merne*;

and hence these mounds are now known in scientific literature as *terremare*. In course of these annual excavations a number of antiquarian objects were encountered by the workmen, such as fragments of pottery, Roman coins and tiles, implements of bronze, bone, and horn, the bones of domestic and wild animals, and occasionally those of men. These discoveries for a long time failed to lead to any scientific investigation, and, when the mysterious mounds happened to be noticed by the early writers of last century, each had a theory of his own to account for them. The celebrated naturalist G. Venturi (1822) assigned them partly to the Boii, a Celtic race who here cremated their dead warriors and ceremonially threw their weapons and animals taken in war into the burning pile, and partly to the Romans who subsequently inhabited the country and selected these mounds as burial-places. Others supposed them to have been the sacred and traditional cemeteries of successive races, and hence their contents were called cemetery-earth (*terra cimeteriale*); and it is a curious fact that many of these truncated mounds are to this day crowned by a modern church or convent, around which the Christians have been in the habit of burying their dead. B. Gastaldi thought the stratification of the deposits could be accounted for only by the intervention of floods and inundations, such as the annual overflowings of the Po and the bursting of the numerous torrents which descend from the Apennines.

These and similar theories, based on the supposition that the *terramara* mounds were the abodes of the dead, were not, however, in harmony with the domestic character of the pottery and industrial implements which were turned up. The starting-point of a long series of researches which ultimately solved the problem was the announcement, in 1861, of P. Strobel that the remains of a *palafitte*, analogous to those found in lakes and peat-bogs, were to be seen below the true *terramara* beds at the station of Castione dei Marchesi, near Borgo San Donnino, in the province of Parma. This discovery aroused much speculative interest, especially when correlated with the researches initiated by B. Gastaldi regarding pile-dwellings in lakes and marshes, the existence of which, in Italy, had just then been proved by the discovery of their remains in the peat-bog of Mercurago and in Lake Garda.

Reflecting on these novel revelations, Strobel and Luigi Pigorini, both then residing at Parma, began a series of investigations regarding the *terremare* in their own vicinity, the outcome of which was a joint report, first published in 1862 as part of Gastaldi's well-known work, *Nuovi cenni sugli oggetti di alta antichità trovati nelle torbiere e nelle marniere dell' Italia*.[1]

Interest in the whole subject now rapidly increased, and extended to agriculturists and local observers. Yearly excavations were carefully scanned for antiquities, and special excavations in the interests of science were even undertaken by the State. The outcome of these elaborate researches has been to show that a typical *terramara* settlement was virtually a land *palafitte*, trapezoidal in shape (with two sides always parallel), and orientated—the degree of orientation being dependent on the direction of the sunrise when the settlement was founded. In their construction one uniform plan was adopted.

Having selected a site suitable in size to the requirements of the community, the constructors proceeded to surround it with a moat, the excavated materials being thrown up in the form of a dike or rampart on the inner bank. The inside edge of this dike was then lined with a series of small rectangular enclosures made of horizontal beams laid one above the other, as in a Swiss châlet. The beams, which were roughly hewn and partially mortised at the points of crossing, projected irregularly beyond the enclosed spaces, some extending as far as the adjacent compartments. The interior of these log-houses was then filled with rubbish—clay, gravel, pottery, bits of wood, etc. From special investigations conducted at Castione, Pigorini came to the conclusion that the purpose of this curious structure was to support the inner side of the earthen dike (*contrafforte dell' argine*), and so give it a perpendicular facing. The area thus enclosed was then thickly planted with stakes, the tops being brought to a common level, and over them a wooden platform was laid. On this platform, huts, made of light timbers and plastered over with clay, were erected. Thus, in a very simple manner, was constructed a fortified village, access to which was secured by a wooden bridge spanning the surrounding moat. The vacant space beneath the common platform became a convenient receptacle for all sorts of refuse, including lost and worn-out objects of industry. When, in the course of time, the space became filled up, the *terramaricoli*, in order to avoid the labour of removing the débris which would have accumulated around them, adopted the ingenious plan of constructing a brand-new platform above the former. It seems that, in some instances, a preliminary step to the carrying out of this project was to set fire to the entire village, thus at one coup getting rid of all sanitary difficulties as well as of a number of uninvited guests. Having started *de novo* with a clean bill of health, they elevated the surrounding dike to the requisite height, and planted stakes, as formerly, over the habitable area for the support of the new platform. This mode of procedure appears to have been repeated over and over again, until in the course of time the successive deposits accumulated to a height of 15 or 20 feet.

Of subsequent discoveries the most remarkable were the result of systematic excavations on the *terramara* of Castellazzo di Fontanellato, in the province of Parma, conducted by Pigorini at suitable intervals during the summers of 1888 to 1896.

In this station the surrounding moat was 30 metres wide and 3½ deep below the original level of the plain. It was kept supplied with water from a neighbouring stream by an artificial canal, and in another part there was an overflow canal only half a metre in depth, so that water always remained in the moat to a depth of 3 metres. Along the inside of the moat there was a rampart, 15 metres broad at the base, having its outer side sloping and its inner side vertical—being kept in this position by a *contrafforte*. Although the woodwork of this structure had almost entirely decayed, there was no difficulty in recognizing that it was similar to that of Castione, already described. The only access to the interior was by a wooden bridge, from which the main street, 15 metres wide, extended midway between the two parallel sides of the fort. Along the middle of the east rampart and a little to its inside, there was a raised mound of earth, 100 metres long and 50 broad, surrounded by a moat and a *contrafforte*, and crossed by three bridges. This was the citadel of the village, and within it was an open trench, at the bottom of which were five rectangular pits in a row, each of which had been covered with a wooden lid. These receptacles are supposed to have been for ritual purposes, and are regarded by Pigorini as the prototypes of analogous pits found in Roman camps, such as those described by M. Jacobi of Homburg as occurring in the *Limes Germanicus*. Facing the middle bridge of the citadel, another street, but only half the breadth of the former, ran across the settlement, at right angles to the main street. Pigorini has also pointed out that these two intersecting streets are virtually the same as in a Roman camp, with its *cardo maximus* and *decumanus maximus*. Other streets ran parallel to the two main roadways, and thus divided the whole habitable area into rectangular divisions of equal size. All the spaces formed by the intersection of the streets contained traces of the piles which had supported the wooden platforms on which the huts had been erected.

Among the more important results of the investigations at Castellazzo was the discovery of two cremation cemeteries containing vases with calcined bones. One, situated near the south-east corner of the village, was of a square shape, each side measuring 165 metres. On being examined, this necropolis turned out to be a veritable pile-structure, having rows of cinerary urns placed close together, not, however, on the ground, but on a wooden platform. It was surrounded by a moat, 10 metres broad and 1·60 metres in depth, from which it would appear that the houses of the dead were constructed on the same plan as those of the living.

The station of Castellazzo was by no means a newly discovered site when Pigorini began his investigations, as its fertilizing earths were excavated by the peasants from time immemorial. The relics

[1] This work was translated into English by C. H. Chambers under the title of *Lake Habitations and Pre-historic Remains in the Turbaries and Marl-beds of Northern and Central Italy*, and published in 1865 by the Anthropological Society of London.

found on it from time to time had not been carefully collected, but nevertheless a goodly number had been sent to the museums of Parma and Rome. They are similar to the ordinary relics characteristic of the *terremare*, such as pottery (including the famous *ansa lunata*), loom weights, terra-cotta figurines of animals, and various objects of deer-horn, together with an assortment of Bronze Age implements, weapons, and ornaments.

The opinion of Pigorini and other Italian authorities is that the original lake-dwellers came into Italy from the great highway of the Danube by way of Croatia, Carinthia, and Venetia. On reaching the Po valley, they founded settlements in the lakes of Garda, Fimon, Arquà, and others during the transition period between the Stone and Bronze Ages. In the lake of Garda the settlements were numerous, and some of them continued to flourish down to the early Iron Age. In moving westwards these immigrants followed the left bank of the Po, founding settlements in the intermediate lakes, until they reached the lakes of Varese and Maggiore, which henceforth became their headquarters in the western part of the valley. Meanwhile the early settlers who remained in the eastern district began to found lake-dwellings (*palafitte*) on swampy ground, the lakes here being too few to afford suitable accommodation for their increasing agricultural and pastoral pursuits. Subsequently they crossed to the south side of the Po, where, the land being low-lying and subject to inundations, they continued their inherited system of habitations with the addition of having them fortified by a moat and a rampart. The crossing of the Po, which doubtless was a great military achievement, is supposed to have taken place at Viadana, and it is worthy of note that the great camp of Castellazzo was in the vicinity, on the frontier of the territories of the Ibero-Liguri, the original inhabitants of the country—a fact which seems to the present writer to have been the *raison d'être* for the exceptional defences of the *terramara* villages of Western Emilia. On the east side, towards Bologna, the hut-constructors of the Stone Age were conquered and subjugated by the *terramaricoli*, who then installed themselves in their hut villages—thus accounting for the remains of the two civilizations being met with in the stations and habitable caves all along the coast of the Adriatic. Gradually these *terramara* folk moved southwards, and, according to Pigorini, became the actual founders of Rome. At any rate, a typical *terramara* station has been discovered as far south as Taranto.

5. Terpen.—We now proceed to inquire if structures analogous to the *terremare* are found elsewhere in Europe. It is a remarkable fact that, notwithstanding the striking appearance which the Swiss lake-villages must have presented to strangers, classical writers are absolutely silent about them. Such reticence does not, however, apply to the class of remains now about to be described. Before the construction of the great sea-dikes of Holland, the whole of West Friesland would have been in that hybrid condition described by Pliny (*HN* xvi. 1), in which it was difficult to say whether it belonged to sea or land:

'Here a wretched race is found, inhabiting either the more elevated spots of land, or else eminences artificially constructed, and of a height to which they know by experience that the highest tides will never reach. Here they pitch their cabins; and, when the waves cover the surrounding country far and wide, like so many mariners on board ship are they,' etc.

At the present time this region is studded with certain low mounds called *terpen*. From a map of their geographical distribution recently issued by the Friesch Genootschap, it appears that their number in Friesland alone amounts to 500, of which 200 have already been excavated. Of the remaining 300 many are not available for either agricultural or archæological purposes, being occupied by villages, churches, cemeteries, etc. Like the *terremare*, these *terp*-mounds have for a long time been excavated on account of their rich ammoniacal deposits, which are used by agriculturists as guano; but, until they accidentally attracted the attention of archæologists, nobody seemed to have given a thought to their origin. As their excavation is prosecuted solely in the interests of agriculture, little attention is paid to the position of the archæological treasures which they contain. Either a canal or a railway siding is conducted to the perpendicular facing of the excavation, and from it the transporting boats or waggons are filled. Most of the larger antiquarian objects are thus secured, but many of the smaller articles, such as beads and ornaments, escape observation. From the relics thus collected the curator of the Leeuwarden Museum has the privilege of selecting any that he thinks necessary for the national collection, but the rest may be sold or disposed of privately.

As to the origin of the *terpen*, they are now proved to have been originally constructed as pile-dwellings, at least as regards some parts of their interior; and some of them are probably the actual mounds described by Pliny. The *modus operandi* was, in the first place, to raise a circular ring-mound of mud during ebb-tide. When this mound was sufficiently elevated to keep the waves outside, wooden platforms supported on short stakes were erected in the interior, and on these huts were placed. As the rubbish accumulated the process was repeated until the interior became a solid mound, precisely like what took place in the *terremare*. The towns of Leeuwarden and Leyden are said to be built over one or two *terp*-mounds. The industrial remains collected in the course of the excavations of the *terpen*, and carefully preserved in the museum of the Friesch Genootschap at Leeuwarden, give a vivid picture of the culture and civilization of their inhabitants from pre-Roman times down to the 12th century.

Among the relics the following may be noted: egg-shells (hen and goose), some of which were unbroken; a flute made of the shank bone of an animal; Anglo-Saxon, Byzantine, and Roman coins; wooden spades; large casks for storing water; canoes; bone skates; clay loom weights; toilet and weaving combs; beads of amber and glass; quantities of the débris of flax; mittens with one stall for the thumb; cock-spurs, etc. Latterly fibulæ of La Tène types, Roman tiles and pottery (*terra sigillata*)—some specimens of the latter having makers' marks on them—bridle-bits of iron, bronze pots, and Merovingian brooches have come to light; but no objects characteristic of the Bronze Age.

During the year 1905 a number of urns and human skeletons were found in a localized spot within a *terp* near Leeuwarden. Some of the skeletons were enclosed in coffins made of the hollowed trunks of trees and some in wooden boxes. The cinerary urns were hand-made, and are regarded as of Saxon origin, dating from the 5th or 6th cent. A.D. There were, however, a few wheel-made urns, which are considered to be the work of the Franks, as the wheel was not used in Friesland, either by the Saxons or Frisians, till the 10th or 11th century.

Osseous remains representing the following animals are abundantly met with: horse, ox (several varieties), cat, dog, sheep, wild boar, deer, roe, and fallow-deer. Among the skulls of these animals are one or two of the four-horned sheep. It may be of interest to note that the bones of this animal were among those identified by W. R. Wilde as coming from the *crannog* of Lagore in Ireland.

Analogous structures, under the names 'Warfen' and 'Wurfen,' have been described in the low-lying regions of East Friesland, the fen district of Holland, the embouchure of the Elbe, and, indeed, in nearly all the marshes along this part of the North Sea coast (see *Munro Lectures* for 1912, p. 445 f.).

6. Pile-structures in rivers.—Habitations erected over the margins of rivers, though possessing features common to both lake-dwellings and *terremare* proper, yet differ in other respects so much that they must be treated as a separate group.

(*a*) *Butmir* (Bosnia).—The fertile plain of Ilidze, occupying the centre of a wide basin, about 11 kilometres long by 7 broad, has been formed by sedimentary materials imported by numerous streams from the surrounding hills, which, by their junction here, give rise to the river Bosna. In earlier times this basin was more or less a lake, and, indeed, in winter parts of it are still submerged. Almost in its centre there is a portion of land covering several acres, which, on careful inspection, is seen to be a little more elevated than the part of the plain in its immediate proximity. This elevation was selected by the Government as the site of offices for a model farm; and, when, in 1893, excavations for the foundations of these buildings were begun, it was discovered that all this raised area was composed of the refuse of early human occupancy. This pre-historic settlement, or workshop, as some suppose it to have been, is now known under the name of 'the neolithic station of Butmir.' Part of the area is now occupied by a large dairy and other buildings, and the rest of it has been excavated for scientific purposes. A perpendicular section, specially prepared to show the position and nature of the materials of which the elevation was composed, disclosed the following deposits in successive strata from above downwards.

On the surface were 12 to 16 inches of clayey soil; then a blackish streaky mixture of clay mould, charcoal, etc., arranged in wavy and more or less parallel strata. The depth of this heterogeneous mass was from 3 to 5 feet, and it was in it, dispersed apparently throughout its entire contents regardless of depth, that all the relics were found. Beneath this again was a natural deposit of fine yellowish clay, very adhesive and well adapted for the manufacture of pottery. The discovery of hollows, extremely variable both in size and in form, in this underlying virgin clay, suggested to W. Radimsky, the superintendent of the excavations, the idea that they were the foundations of the original huts of the inhabitants. The subsequent discovery of a number of round holes in these hollows, which were readily recognized as having been formed by wooden posts, because, although the wood had entirely decayed, the spaces had become filled up with débris, gave rise to the theory that the settlement was really a pile-structure—an opinion which the present writer has supported on the following grounds: (1) the extreme irregularity in form and size of the so-called hut-foundations; (2) the occasional presence of pieces of charcoal, pottery, and other débris on the surface layer of the virgin clay, thus showing that the deposition of the latter had not entirely ceased when the settlement was founded; (3) the presence of some of the idols and other relics among the stuff which lay in these hollows, together with the entire absence of hearths or evidence of fire in any of them; (4) the general horizontality of the strata which, in section, were seen to run across the margin of the hollows without any break in continuity; (5) at various levels throughout the débris were to be seen portions of burnt and beaten clay platforms, as well as clay casts of the timbers which formed the walls of the huts.

A peculiarity of the Butmir station was the scarcity of organic materials; not even a bone or wooden handle remained, although, from the abundance of perforated stone implements, such objects must have been largely used—all having apparently disappeared by natural decomposition. Quantities of charred corn were found in different places throughout the débris. That grain and seeds were largely used as food is inferred from the fact that no fewer than 900 stone grinders, including fragments, were found throughout the station. The industrial remains consist of about 70 fragments of idols, mostly in human form, quantities of broken pottery, including some with beautiful spiral ornamentation, and a large assortment of polished stone implements—knives, saws, scrapers, borers, chisels, hammers, axes, and adzes—but no metal object is among the collection.

(*b*) *Ripać.*—The village of Ripać lies on the east bank of the river Una, a tributary of the Save. Here the stream widens into a kind of lake in which are two small islands accessible by wooden bridges supported on piles. Like other Bosnian rivers, the water of the Una holds in solution a large amount of calcareous matters which, on exposure to the atmosphere, are deposited, causing in some localities barriers across the stream. The miniature falls and currents by which the waters escape over these barriers are often utilized as the motive-power of corn-mills. At Ripać there is such an obstruction stretching from the larger island to both shores, and along it may be seen a row of these little mills, in the form of wooden cabins planted on tall piles. In course of removing some obstructive materials to the free escape of the water from the small water-wheels, the workmen encountered the stumps of thickly-set piles in a blackish relic-bed containing fragments of pottery, clay weights, broken bones, etc. This discovery was recognized to be of so much importance that the Government gave orders to have the locality investigated under W. Radimsky, the chief inspector of mines. Exploratory operations were carried on during the summers of 1893 and 1894, and it was then ascertained that a prehistoric pile-structure not only occupied the whole space between the islands, but also embraced a considerable portion of the larger island and the bank of the river. The upper deposits contained only Roman and later remains, but in the true culture-bed underneath were found burnt beams, organic materials, portions of platforms and huts, and a large assortment of relics of the pre-historic period. The piles were mostly made of oak stems, sometimes split and perforated, but of these only the stumps remained; and there were two sets of them, a lower and an upper, which suggest an earlier and a later structure. There was also evidence that the settlement, or at least a portion of it, had been destroyed by a conflagration; but this catastrophe did not bring it to an end.

The objects collected were made of iron, copper, bronze, silver, lead, stone, clay, glass, bone, wood, and vegetable fibre. Among the relics were numerous articles characteristic, not only of the Stone and Bronze Ages, but of the well-defined periods of Hallstatt and La Tène, thus proving that the habitation was occupied continuously from the end of the Neolithic Age till taken possession of by the Romans. During the Middle Ages the larger island became a fortified castle.

Radimsky states that indications of similar pile-structures are to be seen at several other localities on the river Una, viz. at Golubic, Ribić, Kralje, and Brekovica.

(*c*) *Donja Dolina* (Bosnia).—The site of this pile-structure is on the south bank of the river Save, a tributary of the Danube. Here an oval-shaped terrace, some 500 paces in length and half this in breadth, presents a steep front to the river, but elsewhere falls away, except at the west end, where the escarpment turns abruptly inland, forming the bank of what was formerly a bay in the river. The surface of this terrace is 3 or 4 metres higher than that of the surrounding land, and is almost the only spot in the neighbourhood that is not submerged during the periodical floodings of the Save. It is called 'Gradina,' *i.e.* 'fort,' by the peasants; and here, during heavy floods, they find shelter for themselves and their cattle; and for the same reason it contains two village cemeteries—one for the Catholics and one for the Orthodox Protestants.

For several years, articles of antiquarian value from the vicinity of Donja Dolina were now and again presented to the Landesmuseum at Sarajevo—a fact which at last induced Ciro Truhelka, head of the archæological department, to visit the

locality. On walking along the river, at the foot of the 'Gradina,' he observed the tops of oak piles protruding through the river mud, while scattered around them were fragments of pottery, spindle-whorls, prism-like objects of burnt clay, worked portions of deer-horn, etc., from which he concluded that before him lay the débris of a prehistoric pile-structure. Excavations were begun in the following year (1900), and continued for several successive seasons when the water-level of the Save was favourable. The results are of great archæological importance from the wealth and variety of the relics discovered, and the ability with which they are recorded in two magnificently illustrated reports by Truhelka (*Wissensch. Mitt. aus Bosnien und der Herzegowina*, ix. [Vienna, 1904] and xi. [do. 1909]).

From the very beginning of the excavations it became evident that the structural details of this settlement deviated, in many respects, from the ordinary *Pfahlbauten* as hitherto known in Europe. The first interesting discovery was a row of piles running parallel to the river, which proved to have been the under portion of a palisade against the current, as the piles were bound together by intertwining willow thongs. In continuing the excavations inwards, the excavators brought to light the remains of several houses supported on wooden posts. These posts were thickly set, no fewer than 978 having been counted over an area of 1160 square metres—nearly one for every square metre. Many of them, however, belonged to a later period, and were inserted to strengthen old timbers for the support of new houses. They were for the most part made of oak tree-stems, seldom split or squared, and well pointed with sharp metal tools. A little back from the river palisade there was a raised promenade from which a sloping gangway gave access to the underground vaults containing the supporting piles, as well as to the platforms on which the houses had been erected. Little of the structural details of the dwelling-houses remained, except the foundations of the partition walls and some loose spars and boards, which crumbled into dust as soon as they were exposed to daylight. During the excavations the sites of eleven houses were exposed, all of different dimensions, one measuring 4·5 metres by 6 metres, and another 6 by 9 metres. By comparing the more perfect remains from different sites, a fairly correct idea of their plan and internal arrangement was obtained. Each consisted of a large room and one or two smaller compartments. The former was regarded as the kitchen, with a fire-place, a hearth, and an oven made of well-burnt clay.

It is difficult to determine the former extent of this singular settlement. Strong stumps of piles were met with over a large area of the adjacent river-bed. It has also been ascertained that during the digging of graves in the Catholic cemetery the same class of relics were often thrown up. From these and other suggestive facts, it has been conjectured that the whole of the 'Gradina Hügel' consists of the débris of pile-dwellings—an area approximately amounting to 25,000 square metres.

That the underground vaults were sometimes utilized as cattle-pens was made evident by the large amount of animal dung that had accumulated in some of them. But this was not the only use to which they were put, as in several instances cinerary urns and wooden coffins (the latter containing human remains) were found. One coffin, that of a child, had the skeleton below the pelvis pierced by a supporting pile, showing that this burial was older than the reconstruction of the superincumbent dwelling-house. The urns contained the incinerated remains of bodies, charcoal, ashes, and an extraordinary wealth of grave-goods; but, unfortunately, the latter had been greatly damaged by the fire. It would appear, from the valuable nature of some of these offerings, that the cremated persons were of greater social distinction than those buried by inhumation. The objects consisted of fibulæ and spiral bracelets of bronze, beads of glass, amber, and enamel, and other ornamental relics characteristic of the Hallstatt period. Of special interest was one urn, which contained a necklet composed of several hundred beads of amber, enamel, and coloured glass, seven cowrie shells, two perforated teeth, and a large clay bead without any ornamentation. Among the relics which supply a clue to the latest date of the settlement were five coins, one of bronze and the others of potin—all 'barbarous imitations of the tetradrachms of Philip of Macedon' (356–336 B.C.).

A discovery which materially helped to define the chronological horizon of the pile-dwellings was the identification of the cemetery in which their inhabitants were buried. It was located on some ridges, not subject to submergence, at a distance of some 600 paces to the south-west of the *Pfahlbau*, and 200 from the present bed of the river. This necropolis contained both burnt and unburnt interments, and yielded an immense assortment of relics which, from the standpoint of archæology, were recognized to be precisely similar to those disinterred from the excavations in the 'Gradina.'

(*d*) *Pile-structures in Hungary.*—On the right bank of the Theiss, a few miles from the railway station of Szolnok, near the village of Tószeg, there is an artificial mound to which, since the meeting of the International Congress of Pre-historic Archæology at Budapest, in 1876, much importance has been attached, on account of the opinion expressed by L. Pigorini that it is identical in structure with the *terramara*-deposits of Northern Italy. The mound, though considerably undermined by the river Theiss during the great floods of 1876, is still of considerable extent, measuring 360 metres in length and 100 in breadth, and rising to a maximum height of 8 metres above the surrounding plain. It is only in times of flood that the waters reach the mound, its usual bed being a mile and a half distant. When the artificial nature of the mound became known in consequence of the section exposed by the floods, some extensive excavations were made to ascertain the archæological character of its contents. An assortment of the objects collected during these researches was exhibited at the Congress, among which were the following:

Perforated hammers of stag-horn, various pointed implements of bone and horn, perforated teeth and the leg-bone of a horse pierced in two places, probably a skate, polished stone celts (some perforated), four flint flakes (one of obsidian), corn grinders, and various worked stones; a fragment of a bronze pin, a bronze knife, and a small ingot of this metal; pottery, in the form of a variety of dishes, some with handles; various objects of burnt clay—a whistle, buttons, spoons, and eighteen pyramidal and perforated clay weights; a considerable amount of food-refuse, such as bones of animals, scales of fish, land shells, charred grain, etc.

During the meeting of the Congress, L. Pigorini, R. von Virchow, and Miss J. Mestorf visited the Tószeg excavations and made some further researches which enabled them to agree on the correctness of the following propositions, which were published in separate reports after their return home:

(1) The existence of piles and wooden beams was satisfactorily proved at three different levels; (2) the materials which contained the débris of human occupancy were distinctly stratified, and formed undulating layers amounting to a total thickness of 4 metres; (3) the antiquities collected belonged to the three pre-historic ages of Stone, Bronze, and Iron.

F. Romer gave an account of his excavations at Tószeg and other localities to the members of the Congress in an article entitled 'Les Terramares en Hongrie.' It is worthy of note that in one of the

stations, viz. Ascott-halom, he mentions that rotten piles were observed in its lowest stratum before Pigorini called attention to their significance. The author concludes his article by stating that *terramara* deposits are by no means confined to the valley of the Theiss, as they have already been observed in various other low-lying localities in the Danubian valley, both above and below Budapest. But the task of excavating such huge masses goes beyond the means at the disposal of ordinary archæological societies.[1]

7. General remarks.—Notwithstanding the discovery of various portions of human skeletons at several stations, and their subjection to the examination of anatomical experts, anthropologists are not agreed that the data thus ascertained prove that the constructors of the pre-historic pile-structures belonged to one race with definite physical characteristics. T. Studer (*ZE* xvii. [1885] 548) advocates the theory of Troyon, viz. that with the introduction of bronze there came a new race of people; and this opinion he bases on the fact that at Sutz and Vinelz two kinds of human skulls were found, viz. brachycephalic and dolichocephalic, whereas in the pure Stone Age stations only the former were, according to him, met with. Virchow's conclusions on lacustrine craniology are as follows (*ib.*, p. 300):

(1) In the stations of the pure Stone Age brachycephalic skulls only are known to a certainty to have existed. (2) In the transition period both brachycephalic and dolichocephalic skulls are known. (3) In the full Bronze Age there is a slight preponderance of dolichocephalic skulls.

On these grounds Virchow thought that during the Bronze Age a new people joined the original lake-dwellers by degrees, but not as conquerors subverting the previous order of things—an opinion which seems to be strengthened by the undoubted continuity of the same social organizations in both these periods. Bronze was gradually introduced, and it took some time to supersede the cutting implements previously in use. Nor was there any violent disturbance of the previous conditions of social life. The original system of constructing lake-villages was continued, and the only changes detected in their structure were such as can be accounted for by the use of better implements.

Although trepanning was practised in Central Europe as far back as the Stone Age, it does not appear that this custom was prevalent to a great extent among the lake-dwellers. Segments of the upper portions of human crania, supposed to have been used as drinking-cups, were found at Gerlafingen, Sutz, Schaffis, and Locras; and from the last-named there was also a skull having a circular portion cut out, as if *post mortem* trepanning had been performed. Roundlets cut out of skulls are supposed to have been used as charms, and such relics are frequently found in the graves of the period. From lake-dwellings only two of these objects have been recorded; one from Concise has two small perforations, and another, figured by Gross, has one hole. On the Trajan column a Dacian village is represented as having human skulls set on poles before the walls. The finding of skulls of different races in the lake-villages might, therefore, be accounted for on the supposition that they were trophies of their enemies, and not the skulls of their actual inhabitants.

In eastern Switzerland and the Danubian valley the number of settlements greatly decreased during the Bronze Age, while in the Lake of Geneva they increased, and in Lake Bourget its eight stations flourished almost exclusively in the Bronze period.

In instituting a comparison between the ordinary lake-dwellings and the *terremare* of Italy, it may be observed that the latter term was originally applied only to the fertilizing materials, and not, as at present, to the *tout ensemble* of a settlement. From this point of view any organic refuse from an inhabited site containing a sufficiently large amount of ammoniacal products to be used as fertilizers (as was the case with the contents of the Barma Grande cave at Mentone) might be not inappropriately so designated. If, on the other hand, the special features of Castellazzo—moat, dike, *contrafforte*, canals, roadways, citadel, ritual pits, trapezoidal shape—must be regarded as essential characteristics of *terramara* stations in general, then it must be admitted that there are few such structures outside Western Emilia. If, however, the few known examples of the Castellazzo type be excluded on the ground that they were military forts, we can find in the Po valley parallels to all the settlements which we have described elsewhere in Europe. In pile-structures on the sea-shore, and on marshy ground liable to flooding, dikes were indispensable. The Butmir station belonged to the Stone Age, and it did not appear that a dike was necessary either for defence against enemies or to prevent flooding, as it was constructed over water.

Much significance has been assigned to the pottery known as *ansa lunata* or *cornuta*. Formerly the manufacture of this handle was supposed to be a monopoly of the *terramara* folk of Emilia, but now it has been shown to have a wider distribution, extending southwards along the coast of the Adriatic as far as Taranto and other localities in S. Italy. It is found in the lake-dwellings of the eastern district of the Po valley, but—what is very remarkable—it is entirely absent from those of Piedmont and Western Lombardy. Outside Italy it is common in the early Iron stations of Bosnia, as at Ripać and Donja Dolina, as well as in Bohemia, Lower Austria, Hungary, Styria (*Bullettino di Palet. Ital.* xv. [1889] 65). Before the brachycephalic lake-dwellers swarmed into Europe, its neolithic inhabitants were dolichocephalic, and disposed of their dead by inhumation. It appears that they freely associated with the newcomers, as was the case with the Ibero-Liguri in N. Italy, where remains of the two civilizations were found on the same stations, that of the Stone Age being in the lower strata. There is evidence to show that burial by cremation was practised by the *terramara* folk, and by both the eastern and western lake-dwellers towards the end of the Bronze Age and beginning of the Iron Age; but whether the latter were cremationists on their first appearance in Italy is a problem that has not yet been solved. Singularly enough, the same uncertainty has been experienced with regard to the burial customs of the lake-dwellers of Central Europe. Some archæologists are inclined to exaggerate the importance of this question, on the plea that the manner of disposing of the dead is hereditarily so rooted in the human constitution that it would not be readily changed. But, as a matter of fact, the contrary is the case. Cremation, being the outcome of religious ideas, powerfully influenced humanity in those early days, and spread like wild-fire throughout the whole of Europe, so that the change from inhumation to incineration might have been accomplished in a short space of time.

The cause of the almost sudden discontinuance of the *palafitte* system of habitation all over Europe at the end of the Bronze Age is not known. We may, however, surmise that it was deeply-seated, and partly due to the law of the survival of the fittest, or rather the destruction of the unfittest. In the smaller lakes the growth of peat would make lacustrine habitations useless as a means

[1] For an elaborate and highly illustrated account of the *terremare* and analogous remains in Europe, readers may consult the present writer's recent book, *Palæolithic Man and Terramara Settlements in Europe*.

of defence. Of the settlements in the Po valley the lake-dwellings of Lake Garda were the last to be abandoned, but the *terremare* ceased to be occupied at an earlier period, apparently having been found inadequate to supply the social comforts prevalent among the races who subsequently dominated the Italian peninsula.

In conclusion, we are justified, from a consideration of the archæological phenomena hitherto disclosed by lacustrine research, in formulating the hypothesis that the primary founders of the lake-dwellings of Europe were brachycephalic immigrants, in the neolithic stage of culture, who, in successive hordes, moved westwards by way of the Danubian valley, but occasionally diverged from the main route into the numerous affluents of the Danube. The goal of all these shepherd farmers was the rich and well-watered pasture-lands along the lakes, brooks, and springs of the Alpine regions, which constitute the primary sources of the great rivers of Central Europe and their tributaries. The Scottish and Irish *crannogs*, the Glastonbury lake-village, and other lacustrine habitations of the Iron Age were but sporadic remnants of the more ancient system, which, like every dying art, passed through a stage of degeneration before final extinction.

LITERATURE.—For an exhaustive list of the literature on lake-dwellings up to 1890, see 'Bibliography of Lake-dwelling Researches in Europe' appended to R. Munro's *The Lake-Dwellings of Europe*, in which over 500 books, monographs, and special articles on the subject are chronologically arranged. We shall therefore here note only a few of the more general works on lake-dwellings, classifying them in chronological sequence: F. Keller, 'Die keltischen Pfahlbauten in den Schweizerseen,' *Mitt. der antiquar. Gesellsch. in Zürich*, ix. (1854), being the first report on the Swiss lake-dwellings (since then other 8 reports have appeared in the *Proceedings* of the same Society, the 9th by J. Heierli in 1888); W. R. Wilde, 'On Crannogs,' in *Descriptive Catalogue of the Antiquities in the Museum of the Royal Irish Academy*, Dublin, 1857; W. M. Wyllie, 'On Lake-Dwellings of the early Periods,' *Archæologia*, xxxviii. (1859); F. Troyon, *Habitations lacustres des temps anciens et modernes*, Lausanne, 1860; L. Rütimeyer, *Die Fauna der Pfahlbauten in der Schweiz*, Basel, 1861; J. Lubbock, 'On the Ancient Lake-Habitations in Switzerland,' *Nat. Hist. Review*, 1862, and *Prehistoric Times*, London, 1865, [7]1913; F. Keller, *The Lake-Dwellings of Switzerland and other Parts of Europe*, Eng. tr., J. E. Lee, London, 1866, [2]1878; E. Desor and L. Favre, *Le Bel Âge du bronze lacustre en Suisse*, Neuchâtel, 1874; R. Munro, *Ancient Scottish Lake-Dwellings or Crannogs*, Edinburgh, 1882; V. Gross, *Les Protohelvètes*, Paris, 1883; E. Vouga, *Les Helvètes à la Tène*, Neuchâtel, 1885; W. G. Wood-Martin, *The Lake-Dwellings of Ireland*, Dublin, 1886; R. Munro, *The Lake-Dwellings of Europe*, London, 1890; T. E. Peet, *The Stone and Bronze Ages in Italy and Sicily*, Oxford, 1909; R. Munro, *Palæolithic Man and Terramara Settlements in Europe*, Edinburgh, 1912. A monograph on the Glastonbury lake-village in two volumes is now being published by the Antiquarian Society of Glastonbury (1911–14).

ROBERT MUNRO.

LALANGS.—See BODOS.

LĀMAISM.—The term 'Lāmaism' is now employed by many Europeans to designate the Buddhism of Tibet, and is intended to identify with that religion the Tibetan Buddhist monks, who are generally known as Lāmas, 'the superior ones.' It first appears to have been used by Köppen (and presumably coined by him) in his *Lamaische Hierarchie und Kirche*, 1859, which, as a pioneer work, gave some currency to the term, although it was employed by him only a few times and merely incidentally. It was not, however, adopted, though mentioned, by Emil Schlagintweit in 1863, who was the first authoritative systematic writer on the subject, setting aside the ponderous compilation by A. Giorgi of the 18th cent. (*Alphabetum Tibetanum*, Rome, 1762), which was little more than a literary curiosity. Altogether unknown to the Tibetans themselves, who designate their creed 'Buddha's religion' (*Sangs-rgyas-kyi ch'ös*) or 'the orthodox religion' (*nang-ch'ös*), this term is in many ways misleading, inappropriate, and undesirable. It conveys the implication that Tibetan Buddhism differs essentially from all other forms of that faith—which is not a fact, for its differences from mediæval Indian Buddhism are relatively trifling and mainly external.

The political ascendancy by which one sect of the Lāmas has achieved temporal power in modern times is in nowise an inherent part of the Buddhism professed by the Lāmas, nor is it shared by the older sects. It is not usual to designate religions by the generic name of their clergy; the epithet 'Brāhmanism' presents no real analogy, as that title is eponymic for the Supreme Creator in that faith, as well as descriptive of his ministers. Phonetically, also, the word is anomalous; for on the analogy of 'Buddhism' from Buddha, it should be 'Lāmism.' Altogether, therefore, 'Lāmaism' is an undesirable designation for the Buddhism of Tibet, and is rightly dropping out of use.

As the Buddhism of Tibet is intrinsically identical with, and derived from, Indian Buddhism of the Mahāyāna, the following account will indicate chiefly those features in which the Tibetan differs from the Indian Mahāyāna (*q.v.* for the general Buddhist doctrine and practices).

1. Introduction of Buddhism into Tibet.—The indigenous religion of Tibet was the Bon, a primitive animistic cult (see TIBET). According to all the vernacular histories, especially the most authoritative, the 'Chronicle of the Kings' (*Rgyal rabs*, and the somewhat apocryphal *Maṇi-bkah-hbum*), Buddhism was first introduced into Tibet in the reign of King Srong-btsan Gam-po, who died A.D. 650. But in the Lhāsa lithic edicts of 783, published by the present writer (*JRAS*, 1909, p. 931), the introduction of 'the orthodox religion,' *i.e.* Buddhism, is stated in general terms to have taken place several generations before Srong-btsan's epoch. This, however, may merely refer to the current legend that five generations before the advent of the latter, in the reign of a king named Lha Thotho-ri, certain Buddhist tracts and some relics fell from heaven upon the top of the king's palace, but that up till Srong-btsan's reign no one was able to decipher the writing. There seems to be no doubt that the indigenous histories are strictly correct in stating that before Srong-btsan's time Buddhism had not yet penetrated Tibet, and that that country was without a knowledge of the written character which is now called 'Tibetan,' which is merely a slightly modified form of the Indian alphabet as current in N. India (and in Khotan) in the middle of the 7th cent. A.D. It was certainly Srong-btsan who introduced this character, and along with it Buddhism in the form then most popular in India, the Mahāyāna.

The credit for the latter achievement is given in the *Maṇi-bkah-hbum* (the authorship of which is ascribed to Srong-btsan) to the two chief wives of the king, one the daughter of the king of Nepāl and the other an imperial Chinese princess. Though it is probable that these ladies may have contributed to the introduction of the new religion, as both of them certainly were Buddhists, it appears possible that Srong-btsan himself took the initiative, as he procured his Indian letters and early Buddhist texts from remote Kashmīr, and not from the more accessible Buddhist country of Nepāl, from which he would presumably have obtained them, had he been then married to his Nepālese wife; and his Chinese marriage was still later (in A.D. 641). The first booklet translated into Tibetan in the new letters was a hymn to Avalokita on the *Oṁ maṇi* formula—which formula, it is recorded, he engraved on stone. As the first patron of Buddhism in Tibet, Srong-btsan was canonized, as were also his wives, by the grateful monks in later days.

But Srong-btsan was not the saintly person he is pictured in the religious histories, for he is seen in the contemporary Chinese chronicles to have been engaged all his life in bloody wars (see his invasion of Central India in A.D. 647 as described by the present writer in *Asiatic Quart. Rev.*, vol. xxxii.

[1911]). He certainly did little, if anything, in the way of Buddhist propaganda. He built a few temples to enshrine the images brought to him in dower by his Buddhist wives. One of these was the nucleus of the present great cathedral-temple at Lhāsa, 'the house of the lord' (Jo-k'ang; cf. Waddell, *Buddhism of Tibet*, pp. 23, 28, 300, and *Lhasa and Its Mysteries*, pp. 341, 361 f.). He built no monasteries, and, according to the vernacular histories, no order of monks was established till over a century later.

2. Establishment of the monastic Order.—After Srong-btsan's death (A.D. 650), Buddhism made little headway against the indigenous Bon cult, and was resisted by the people until the accession of Khri-Srong De-btsan, the fifth in succession after Srong-btsan. The son of an imperial Chinese princess, he was an ardent Buddhist and proselytizer. Desirous of establishing an Order of Buddhist monks among his people, on the advice of his family Buddhist priest, Śāntirakṣita, an Indian, he sent to India for the kinsman of the latter. This was Padmākara or Padmasambhava, of the then popular ritualistic and mystical Yoga school at Nālandā college, and skilled in Buddhist spells (*dhāraṇī*). He was a native of Udayāna (latterly known as Swāt and Kāfiristān) on the Peshāwar frontier of N. India, and he arrived in Tibet in A.D. 747, with several other Indian monks, who were induced to settle in the country. Padmākara established the first monastery at Sam-yäs in A.D. 749 on the left bank of the Brahmaputra river about thirty miles to the south-east of Lhāsa, and installed Śāntirakṣita as its abbot, with seven Tibetan novices as the nucleus of the Order. Of these novices three were elderly; and the first of them, Dpal-bañgs, who succeeded thirteen years later to the abbotship, may be said to be the first 'Lāma.' He appears to have studied in India also, and to be the same as Ska-ba-bha-po Dpal-brtsegs, who was one of the chief early translators of the Sanskrit Buddhist canon into the Tibetan language.

'Lāma' is a Tibetan word meaning 'supreme one,' and is strictly applicable only to Tibetan abbots (*q.v.*) and the most learned among the ordained monks. By courtesy, however, it is generally extended in popular conversation to ordained monks in general.

3. Founder of the monastic Order.—Padmākara, the founder of the Order of Buddhist monks in Tibet, is commonly known as Padmasambhava, 'the lotus-born' (in Tibetan Pad-ma Byung-gnas), or as 'the teacher treasure' (Guru Rin-po-ch'e), and also as 'Lô-pön' (*slob-dpon*), the Tibetan equivalent of the Indian *guru*, 'teacher.' It is not easy now to discover with certainty the details of his teaching, but from the remarkably high literary standard of the monks associated with him, as shown by their scholarly translations from the Sanskrit canon, it is difficult to believe that he was the quasi-shamanistic priest that he is represented to have been by the old unreformed sects. There is no doubt that he was a believer in Tantrik mysticism with its prayers to various Buddhist gods and goddesses; but so were the great Indian Buddhist patriarchs, the metaphysicists Vasubandhu and Asaṅga, before his day. No canonical translations are found ascribed to him; but he is the reputed author of several manuals of worship (*sādhanas*)[1] for compelling the good services of certain deities by means of the repetition of spells (*dhāraṇī*) after the style of the Brāhmanical *mantras*—a class of literature which was prevalent in Indian Buddhism at that period.

4. Translation of the Indian Buddhist canon.—Under the zealous patronage of King Khri-Srong De-btsan, Padmākara initiated an era of great literary activity and scholarship for the translation of the Buddhist canon from the Indian Sanskrit. Several of the most intellectual youths were sent to India to learn Sanskrit and Buddhist philosophy in its home in mid-India, and some of the most learned monks of India were induced to proceed to Tibet and settle there for this evangelizing work. In a letter embedded in the great commentary, the *Tan-gyur* (xciv. 387 ff.), addressed to this king by the Indian monk Buddhaguhya, we read:

'Thou didst dispatch to India Vairotchana, Ska-ba-dpal brtsegs, Kluyi rgyal mts'an, Ye-shes sde, Armandju, and others, to whom thou didst intrust much wealth of gold and silver, to get the Dharma, increase the little religion that was in thy realm, and open the window which would let in the light on the darkness of Bod [Tibet], and bring in its midst the life-giving waters.'[1]

This indicates clearly that in the middle of the 8th cent. A.D. Tibet was scarcely recognized as a Buddhist country at all. The young Tibetans named therein are some of the best known translators of the Tibetan scriptures.

5. Authenticity and historical value of Tibetan canon.—These Tibetan translations of the Sanskrit Buddhist canon are now of great historical importance, as they preserve with remarkable accuracy the Indian texts, of which most of the originals have been lost in India. The Tibetan translations of these texts, as tested by the few surviving Sanskrit fragments and by isolated texts preserved in Nepāl, display such scrupulous literary accuracy, even down to the smallest etymological detail, as to excite the admiration of all modern scholars who have examined them. Thus their authoritativeness is placed beyond dispute.

These canonical texts thus afford, along with the less precise Chinese and Japanese translations of the same originals, invaluable means for controlling, supplementing, and correcting the less detailed Pāli versions of the early scriptures, and explaining ambiguous terms in the latter, thereby enabling us to gain a more correct knowledge of Buddha and his doctrine than has been forthcoming from purely Ceylonese sources. On this account the study of Tibetan has become indispensable to students of Buddhist Sanskrit and of Buddhism in general. The excellent Tibeto-Sanskrit dictionaries date from this literary epoch, and the formation of the classical Tibetan style. The divisions of the Tibetan Buddhist canon will be indicated below.

6. Growth of the Order and popular adoption of Buddhism.—The institution of the indigenous Order on these Indian lines was opposed by Chinese Buddhists, under a Mahāyāna monk named Hwa-shang (the Chinese term for a Buddhist monk corresponding to the Sanskrit *upādhyāya*, or 'master'). These Chinese, who appear to have been itinerant priests, were defeated in argument by the Indian Kamalaśīla, and expelled from the country, leaving the Indian system to be developed unmolested. Many monasteries and Buddhist temples were established all over the country, and Buddhism became the State religion of the land.

A second development of literary activity and Buddhist propaganda occurred in the reign of Ral-pa-Chan, the grandson of Khri-Srong De-btsan, in the latter half of the 9th cent. A.D., when the work of translation of the Great Commentaries by Nāgārjuna, Āryadeva, Vasubandhu, etc., was actively prosecuted, and most of the remaining canonical books completed. Among the Indian translators employed by Ral-pa-Chan were the monks Jinamitra, Śīlendrabodhi, Surendrabodhi, Prajñāvarman, Dānaśīla, and Bodhimitra, assisted by the Tibetan translators (or *lo-tsa-va*) Pal-brtsegs

[1] See list of *sādhanas* by F. W. Thomas in *Muséon*, xxii. [1903] 61.

[1] W. W. Rockhill, *Life of the Buddha*, p. 221.

Ye-shessde and Ch'os-kyi-gyal-ts'an. At least half of the two great Tibetan collections, canon and commentaries, is the work of their hands.

Ral-pa-Chan endowed most of the monasteries with State lands and the right to collect tithes and taxes. His ardent devotion to Buddhism, indeed, led to his assassination and the downfall of the monarchy, which event paved the way for the eventual rise of a hierarchy. The murderer of Ral-pa-Chan was his brother Lang-darma, who was at the head of a Bon faction, on which some authentic light is thrown by the Lhāsa edict pillar inscription of A.D. 842, published by the writer (*JRAS*, 1909, p. 1267); on ascending the throne he actively persecuted the Buddhists, and did his utmost to uproot that religion. He desecrated and destroyed many temples and monasteries, burned the sacred books, and forced many of the monks to become butchers. He was in turn assassinated within three years by a Buddhist monk disguised as a Black Hat Bon devil-dancer, and this incident is now a favourite episode in the popular sacred plays.

7. Rise of the hierarchy.—Although on the downfall of the dynasty Tibet became subdivided into several principalities, Buddhism continued to grow steadily in popularity, and the priests became more and more influential, till eventually, in the 13th cent., a hierarchy was established with temporal sway. This was effected by the great Mongol Emperor Kublai Khān, whose grandfather Jenghiz Khān had conquered Tibet. Converted to Buddhism by the Tibetan abbot of the Sas-kya monastery in Western Tibet near the Nepālese frontier, Kublai created the Sas-kya abbot official head of the Buddhist Church in Tibet in return for the favour of formally crowning him as Emperor of China. He also conferred upon the learned Sas-kya Lāma—or 'Sas-kya Pandita,' as he is usually called—the temporal rulership of Western Tibet.

This first of the Tibetan hierarchs thus especially patronized by the Mongols achieved with a staff of his scholars the gigantic task of translating the bulky Tibetan canon into Mongolian, after revision and collation with Chinese texts, the Mongolian character being a form of Syriac introduced into Central Asia by Nestorian Christian missionaries.

The Sas-kya primacy maintained much of its political supremacy for several generations, and used its power to oppress its less-favoured rival sects. It burned the great Kar-gyu monastery of Dikung about A.D. 1320. But on the accession of the Ming dynasty in 1368 the Chinese Emperor deemed it politic, whilst conciliating the monks as a body, by gifts and titles, to strike at the Sas-kya power by raising the heads of two other monasteries to equal rank with it (Dikung of the Kar-gyu sect and Ts'al of the Kā-dam sect), and encouraged strife against it.

8. Rise of the priest-kings of Lhāsa.—At the beginning of the 15th cent. A.D., a Lāma named Tsong-Kha-pa or Je-Rin-po-ch'e re-organized the reformed Kā-dam sect which had been instituted by the Indian monk Atiśa in 1038, and altered its title to 'The Virtuous Order,' or Ge-lug-pa. This sect, which arose at Gah-ldan monastery near Lhāsa, wore as a distinctive badge a yellow cap, and hence was known as the 'Yellow Hat' Order. It soon eclipsed all the others, and in five generations achieved the priest-kingship of the whole of Tibet, which it retains to this day.

Its first Grand Lāma was Tsong-Kha-pa's nephew, Geden-dub, with his succession based on the idea of his perpetual re-incarnation. In 1640 the Yellow Hats leapt into temporal power under the fifth series of Grand Lāmas, the crafty prelate Lob-zang Gya-mts'o, also known as 'the fifth Jina' [a title of Buddha], Gyal-ba-Na-pa. At his request a Mongol prince, Gusri Khān, conquered Tibet and made a present of it to him, and in 1650 he was confirmed in the sovereignty by the Manchu Chinese Emperor, and also in the title of *Ta-lai*, usually written by Europeans *Dalai*, which is merely the Mongolian word for *Gya-mts'o* (or 'Ocean'), the surname of himself and his three predecessors.

This resourceful Dalai Lāma consolidated and extended his rule by inventing divine legends about himself, and by forcibly appropriating many of the monasteries of the older sects. He also built for himself the famous palace-monastery on the red hill at Lhāsa, the name of which he changed to 'Potala,' after the mythic Indian residence of the most popular of all Buddhist divinities, Avalokita, or Lord of Mercy, of whom he posed as the incarnation, and whose special spell was the famous *Oṁ maṇi padme Hūṁ* formula.

9. Origin of the succession by re-incarnation.—The idea of re-incarnation, which is a fundamental element of belief in Buddhism, derived from its parent Brāhmanism, does not appear to have been definitely utilized for the regulation of the hierarchical succession in India, although many cases are cited by Tāranātha, from the Indian histories, of Indian Buddhist patriarchs and saints having been re-incarnated in other saints some generations afterwards.

The succession of the Sas-kya hierarchs was clearly not based upon this system, but was by nomination of relatives. The Yellow Hat succession, however, indisputably shows by the dates of birth and death of the respective incumbents that the succession to the Grand Lāmaship was based upon the theory of direct re-incarnation. The spirit of the first abbot was supposed on his death to be re-incarnated in the world immediately as a new-born infant, and thus was re-born again and again for the good of his monastery and particular sect of Yellow Hats. This theory has latterly been adopted as a basis for succession to the leadership of several other sects as well.

Enlarging this theory, the fifth Grand Lāma introduced the fiction of a divine origin for himself and his predecessors. He declared that both he himself and the first Yellow Hat abbot were re-incarnations of the most powerful and popular of all the kings of Tibet, namely Srong-btsan Gampo; and, further, that the latter in his turn was the earthly incarnation of the Compassionate Spirit of the mountains who had given the early Tibetans the magical food which transformed them from monkeys into men. This Compassionate Spirit was identified with the Buddhist 'god of mercy' Avalokita (see AVALOKITEŚVARA), known in Tibetan as Chān-rā-zi,' 'the all-seeing Lord' (lit. 'clad with eyes'). Avalokita is especially the god who regulates transmigration, and who can procure ready entrance to paradise and escape from hell. His favour can be won by the repeated utterance of his mystic spell, the *Oṁ maṇi* (see JEWEL [Buddhist]) of Indian Buddhism; hence the extreme popularity of this formula in Tibet, and the divine honours paid to the Dalai Lāma, who is believed to be the incarnation of this most powerful of all divinities.

10. Dual Grand-Lāmaship.—The only person whom this Grand Lāma of Lhāsa permitted to share to some extent his divine honours was the abbot of the large monastery at Tashi-lhunpo, the Western capital of Tibet, belonging to his own Yellow Hat sect, and his own tutor. He raised this abbot to the dignity of a Grand Lāma, and gave him the divine pedigree of descent from the Buddha-god Amitābha, the 'Buddha of Infinite

Light,' whose blissful paradise in the west is the popular heaven which was the goal of the majority of Indian Buddhists from the beginning of the Christian era, as it is to-day in Tibet, as well as in China and Japan. This pontiff is generally known to Europeans, after his residence, as the 'Tashi Lāma,' in contradistinction to the 'Dalai Lāma' of Lhāsa. To Tibetans, however, the former of these is usually known as 'the great treasure of learning,' Pan-ch'en Rin-po-ch'e, and the latter as 'the protector-treasure,' Kyab-gon Rin-po-ch'e, or 'the victor Jina,' a title of Buddha himself.

Latterly, a third and a fourth Grand Lāma of the dominant Yellow Hats were instituted for the two kingdoms outside Tibet, to which Tibetan Buddhism extended, namely Mongolia and China. The former of these at Urgya is known as Je-btsun Dam-pa, and possesses temporal sovereignty over Outer Mongolia, like the Dalai Lāma in Tibet; but, although posing as the head of the celibate monkhood, he is not himself celibate. The fourth was appointed by the Emperor Kang-Hsi about 1700, especially for Inner Mongolia, and has his special residence at Peking and Jehol. He is known to Tibetans as Chang-skya-Hu-thuk-thu, and is considered to be an incarnation of Rol-paī Dorje; and his succession, as well as that of the Urgya Grand Lāma, is arranged by the Dalai Lāma.

The spiritual jurisdiction of the Dalai Lāma is not acknowledged outside Tibet and Mongolia, including the land of the Buriats (*q.v.*) bordering Lake Baikal in Siberia, the tracts in Western China which formerly belonged to Tibet, the isolated Tibetan monasteries in N. China, and the Himālayan States of Bhutān, Sikkim, and Ladākh. Neither the Dalai nor the Tashi Lāma exercises any ecclesiastical authority in Tibet over the other and older sects, the Red Hats, whose relative laxity in Buddhist discipline, especially in the matter of uncelibacy, they despise.

11. Sects in Tibetan Buddhism.—No sects appear to have existed prior to Lang-darma's persecution in the 9th cent., nor till more than a century and a half later. The sectarial movement seems to date from the visit to Tibet of the great Indian Buddhist monk Atīśa in 1038. Atīśa, while clinging to Yoga and theistic Tantrism, at once started a reformation on the lines of the higher Indian Mahāyāna system, enforcing celibacy and high morality, and deprecating the Bon rites which had crept into some of the priestly practices of the Buddhist monks. The time was ripe for such a reform, as the monks in Tibet had become a very large and influential body, and possessed a fairly full and scholarly translation of the bulky Mahāyāna canon and commentaries.

The first of the reformed sects, and the one with which Atīśa most intimately identified himself was the Kā-dam, or 'those bound by the Orders'; and it was this sect that ultimately, three and a half centuries later, in Tsong-Kha-pa's hands became less ascetic and more highly ritualistic under the title of Ge-lug, or 'Virtuous Order,' the 'Yellow Hats,' now the dominant established sect in Tibet.

Atīśa, or 'the Lord' (Jo-bo-rje), was the sole profound reformer of Tibetan Buddhism; for we find that the other parallel early reformations were initiated by his pupils. These were the Kar-gyu and Sas-kya sects, which were directly based in great measure upon Atīśa's teaching. These two sects may be regarded as semi-reformations adapted for those individuals who found Atīśa's high standard of morality and discipline too irksome.

The residue, who remained wholly unreformed and weakened by the loss of their best and most intellectual members, were now called the 'Old,' or Nying-ma, as they adhered to the old corrupt practices. To legitimize some of their unorthodox practices borrowed from the indigenous Bon faith, the Nying-ma Lāmas began to discover hidden 'revelations' (*ter-ma*), or fictitious gospels, ascribed to Guru Padmākara, authorizing these practices, just as, it is related, the Indian monk Nāgārjuna, to secure an orthodox reception for his new doctrine, alleged that Śākyamuni had entrusted the developed gospels to Nāga demigods until men were sufficiently enlightened to comprehend the doctrine. Each of these 'finders' of the new revelations claimed to have been in a former birth one or other of the twenty-five traditional disciples of the *guru*. The 'revelations' treat mainly of Bon rites which are permissible in Buddhist practice; and they prescribe forms of worship mostly on the Buddhist model. These apocryphal gospels formed the starting-point for further subdivision of the semi-reformed and the old unreformed sects, which differ from each other chiefly by the particular *ter-ma*-book that they have adopted as sanctioning the worship of a particular Bon deity.

12. Sectarian distinctions.—The distinctions between the various sects are partly theistic and creedal, and partly ritualistic, and are also usually expressed by some external difference in dress and symbolism. None of them relate to the personality or doctrine of the historical Buddha as expressed in the canon, as this is accepted intact by all. These differences may be classed as: (1) personality and title of the primordial deity or Ādi-buddha (cf. ĀDIBUDDHA); (2) special source of divine inspiration; (3) transmitters of this special inspiration; (4) meditative system of mystical insight (*darśana*, Tib. *lta-wa*); (5) special *tantra*-revelation; (6) personal tutelary (*yi-dam*) or Śaivite Indian protective demon; and (7) guardian demon (*dharmapāla*, Tib. *ch'os-skyong*), sometimes of Tibetan type.

The Ge-lug, or dominant Yellow Hats, have as their primordial deity Vajradhāra ('holder of the thunderbolt'), and they derive their divine inspiration mainly, not from the dead Śākyamuni, but from the living Buddhist 'Messiah' Maitreya, the next coming Buddha, as revealed through the succession of Indian saints from Asaṅga down to Atīśa, and through the Tibetan saints from Atīśa's disciple Bromton downwards to Tsong-Kha-pa. The Ge-lug mystical insight is in the *Lam-rim*, or 'graded path,' on which a commentary was written by Tsong-Kha-pa, and their special *Tantra*, or theistic manual, is *Rgya-ch'en-spyod*. Their tutelary Indian demon (*yi-dam*) is 'the fearful thunderbolt' Vajrabhairava (Tib. Dorje-jig-je), supported by Samvara (Śambara, Tib. Dem-chog) and Guhyakāla (Tib. Sang-'dus); and their 'guardian' demon (*dharmapāla*) is 'the six-armed lord' (Gon-po) or 'the horse-necked' (Hayagrīva, Tib. Tam-ch'en), both of them Indian, not Tibetan.

In organizing the Ge-lug sect Tsong-Kha-pa collected the scattered members of the Kā-dam from their ascetic retreats and housed them in monasteries, together with his new followers, under rigid discipline, setting them to keep the 253 Vinaya rules of primitive Buddhism, including strict celibacy, and hence obtaining for them the title of 'Vinaya-keepers' (Dulba-Lāma). He also made them carry a begging-bowl and wear patched robes of a yellow colour after the fashion of the Indian Buddhist mendicant. The bowl, however, soon dropped out of use, as daily begging was not adapted to the sparse population of Tibet. He attracted followers also by instituting a highly ritualistic service, in part borrowed, perhaps, from the Nestorian Christian missionaries who were undoubtedly settled at that time in Tsong-Kha, the locality of his early boyhood in W. China. He

gave his monks the yellow hat which distinguished them from all the other sects, who wore red hats, in contradistinction to the black caps of the Bon priests.

The Kar-gyu, the next great sect after the Ge-lug, was founded in the latter half of the 11th cent. by the Tibetan monk Mar-pa, who had visited India. The name means 'follower of the successive Orders,' expressive of the belief that the rulings of the later Buddhist sages were inspired. Its distinctive features are its hermit practices—meditation in caves and other retired places—and the following peculiarities: its primordial Buddha is also Vajradhara, and its tutelary Samvara; but its mystical insight is Mahāmudrā (*p'yag-rgya-ch'en*) of the 'Middle path,' its Tantra Sum-kar bsduds, its guardian 'the lord of the black cloak' (Bar-nag); its hat has a frontal badge like a St. Andrew's cross (X), to symbolize that meditation with crossed knees is its special feature; with these is associated a stricter observance of the Indian monastic rules. One of its most famous monks was the hermit poet Milā-raspa.

The hermit feature of this sect rendered it so unattractive that several sub-sects arose out of it which dispensed with the necessity for hermitages. These were the Karma, Dikung-pa, To-lung-pa, and Dug-pa (the form dominant in Bhutān), which differ from each other in having adopted a different 'revelation' (*ter-ma*) to allow of worship of an aboriginal spirit. An important image in their temples is that of the founder of their particular sect or sub-sect. In Ge-lug temples Tsong-Kha-pa's image is prominent and receives worship as a canonized saint.

The third great reformed sect is the Sas-kya, or Sa-kya, taking its name from the monastery of that place, founded in A.D. 1072. As we have seen, it became under imperial Chinese patronage the first great hierarchy in Tibet, and in 1251 attained for a time the temporal sovereignty, until eclipsed by its later rival, the Ge-lug sect. Its special source of inspiration is the Bodhisattva Mañjuśrī, through the Indian saints from Nāgārjuna to Vasuputra (Vasubandhu?). Its mystic insight is 'the deep path' (*gambhīra darśana*), its tutelary Vajra-phurpa, and its 'guardians' are 'the tent-lord' and 'the presence-lord' (Gon-po zhab).

Now, however, except in a few externals, it is practically undistinguishable from the unreformed Nying-ma, and celibacy is exceptional. From the Sas-kya two reforming sub-sects issued, the Ngor-pa and Jo-nang, which differ merely in the founders. To the latter sect belonged the famous Tibetan historiographer Tāranātha.

The wholly unreformed sect of Tibetan Buddhists are not numerous in Tibet. They are priests rather than monks, and are freely tinged with quasi-Bon cults. They are found chiefly in the more remote districts. They too have sub-sects, Urgyen-pa, Kartok-pa, and Lhat-sun-pa. The monasteries in Sikkim chiefly belong to the last sect. The Bhutānese lamaseries are not Nying-ma, as is usually asserted by Dug-pa, a sub-sect of the Kar-gyu above noted.

13. Special features of Tibetan Buddhism.—Contrary to Western belief, there is nothing in the Buddhism professed by the monastic Order in Tibet which differs greatly from the type of the Indian Buddhism of the Mahāyāna. The differences in discipline and clothing are mainly those enforced by different climatic conditions. In doctrinal beliefs and practice the Ge-lug monks, who form the great majority of the Order, differ little from the Indian Buddhist monks in the early centuries of our era. The use of sacred sentences as protective charms or spells has been shown by the present writer to have been a feature of Buddhism in India from its commencement, and on the evidence of the Pāli canon to have been practised even by Buddha himself (cf. JEWEL [Buddhist]), and the mechanical repetition of such spells (*dhāraṇī* or *paritta*) was extensively practised about the 5th cent. A.D. by Asaṅga and his brother Vasubandhu according to the circumstantial records quoted by Tāranātha,[1] and supported by an early *sādhana* bearing Asaṅga's name. The grosser priestly theistic and demonistic rites, the practice of which is restricted almost entirely to the unreformed sects which form a minority, are also largely of Indian Śaivite origin. Those which are borrowed from the indigenous Bon will be indicated in art. TIBET. The self-immolation by entombment is an extreme and revolting instance of asceticism, having its parallel in the self-torture of Indian *yogīs*, but it is of altogether exceptional occurrence[2] and never practised by orthodox monks.

14. Grades in the Order.—The monks are of two chief grades—the novice and the ordained, as in Indian Buddhism; to these may be added at the lower end the neophyte and at the top the abbot, or head of the monastery.

(1) The *neophyte*, or probationer-pupil, usually a child of about eight years of age, is called *ge-sñen*, *i.e.* the equivalent of the Indian *upāsaka*, or 'virtuous follower,' the ordinary title of a lay devotee. He receives instruction as in a school under a tutor, and is called *ḍā-pa* (*grva-pa*), 'pupil.' (2) The *novice*, or *ge-ts'ul*, is a formally admitted candidate for the Order. He has gone through the ceremony of 'going forth from home' (*pravrajyāvrata*), of having his head formally shaved, and vowing to keep thirty-six of the precepts. He is now permitted to join in the religious services in the monastery. The great majority of the monks, even the old ones, never rise above this grade to full initiation. (3) The fully ordained monk is called *ge-long* (*dge-slong*), the equivalent of the Indian *bhikṣu*, or 'virtuous mendicant.' He is usually over twenty-five years, and comparatively few ever reach this high stage. He now has to vow to keep the 253 precepts. (4) The *abbot* is called *k'an-po* (cf. ABBOT [Tibetan]).

Nuns are given corresponding titles. They are not numerous, are very illiterate, as a rule, and are allotted an inferior position, scarcely higher than the ordinary lay devotee.

15. Excessive numbers of the monks.—In Tibet we see Buddhism at the extreme limit of its inevitable development when unfettered. For the monastic state is an essential condition for the attainment of Buddhist salvation; and in Tibet this condition has been realized more fully than in any other Buddhist country in the world. Indeed, nowhere else in the world does monasticism appear ever to have reached such vast proportions. This has been the result of the exceptionally favourable circumstances for its unchecked growth and development, under the fostering care of a temporal government which for several centuries has been entirely in the hands of the monks themselves.

As a consequence, there have arisen swarming armies of State-supported celibate monks who live parasitically upon the people and decimate them. Since Buddhism was introduced as the State-religion in the 8th cent. A.D., the Tibetan nation, which formerly was one of the most virile in Eastern Asia, and overran and even conquered China more than once, has steadily declined in power and numbers until it now has not a tenth part of its former population. The only general census of the population hitherto taken appears to be one made by the Chinese, so long ago as 1737; but the proportion probably still holds good, though the total number has greatly declined through the population having died off, presumably in the main as a result of the wide-

[1] F. A. Schiefner, *Gesch. des Buddhismus in Indien*, St. Petersburg, 1869, pp. 103 f., 121, 123, 146; L. A. Waddell, 'Dhāraṇi Cult in Buddhism,' *Ostasiat. Zeitschr.* i. [1912] 178.

[2] Waddell, *Lhasa and its Mysteries*, p. 236.

spread monasticism, for polyandry is far from common.

	No. of Lāmas.	No. of Laity (at 5 per family).
Central Province (Dbus) .	302,500	602,190
Western „ (Tsang) .	13,700	33,760
	316,200	635,950

This gives one monk for every three of the entire lay community, including the women and children.

The shrinking of the population is evident everywhere in Central and Western Tibet, where one sees numerous abandoned tracts of former cultivation and the ruins of former villages and homesteads. The population is, presumably as a consequence of over-monasticism, steadily drifting towards extinction.

16. Excessive monasticism an inevitable result of Buddhism.—Yet this wide-spread devastation worked by unfettered monasticism must inevitably be the outcome everywhere of Buddhism when that religion is free to develop without restraint. Buddhism, with its inveterate note of pessimism, repressing the wholesome instinct for living and for the development and enjoyment of nature's resources, is itself in direct antagonism to all worldly progress, whilst it restricts its goal of Nirvāṇa expressly to those who have entered its celibate monastic Order. This is clearly the teaching everywhere of Buddha himself, and of all orthodox professing Buddhists of all sections of Buddhism, both North and South, *pace* the modernizing theories of popular Western writers. No prospect whatever of attaining salvation or Nirvāṇa in this life is held out by Buddhism to any one except those who actually enter its celibate Order of monks.

This is manifestly the reason, in the opinion of the present writer, why heaven and not Nirvāṇa is the popular goal of lay Buddhists—Indra's heaven in the company of 'the coming Buddha' Maitreya, according to the 'Southern' Buddhists of Ceylon, Burma, and Siam; or Amitābha's paradise in the West in the company of Avalokita, according to the Mahāyānist Buddhists. It is obviously because, in the first place, these respective heavens are the old traditional paradises of the layman's ancestors, and, in the second place, and chiefly, because there is no other goal of bliss open to him on his death; for, being a layman and forced to work for his living, or bound by family ties, he cannot afford to enter the monastic Order, which is the sole avenue to Nirvāṇa.

17. Tibetan Buddhist scriptures.—The scriptures of the Tibetan Buddhists are translations from the Sanskrit texts of Indian Buddhism by the most scholarly monks of mediæval India, assisted by learned Lāmas. A few books in the last volume of the *sūtras* were translated from the Pāli, and a very few from the Chinese. The whole forms a series of over three hundred volumes, each of which with its wooden covers makes a package about 26 ins. long, 8 ins. broad, 8 ins. deep, and weighing about 10 pounds. The volumes generally are in the form of xylographs, or prints from carved wooden blocks, as with the ancient Chinese books, no movable type having been employed; occasionally MS sets of the entire canon are to be found—as, *e.g.*, the set obtained by the present writer and now in the British Museum, MSS no. Oriental 672 ff.

The sacred texts consist of two great collections: (*a*) the canon, and (*b*) the commentaries.

The canon, or *Ka-gyur* (vulgarly *Kanjur*), 'translated word,' forms a series of one hundred, or, in some editions, one hundred and eight, volumes, and comprises 1083 distinct books. It is divided into seven great sections, as compared with the three divisions of the Pāli canonical scriptures, or *Tripiṭaka*. This difference in number is due to a subdivision of the *sūtras* (asterisked in the subjoined list), and the addition of the mystical Śaivite *sūtras* or *tantras*. The divisions are as follows (the constituent volumes being indicated by the letters of the alphabet, in the order of the Sanskrit alphabet):

1. Discipline, *Dul-ba* (Skr. *Vinaya*), in 12 volumes (K–P).
2. Metaphysics and transcendental wisdom, *Ser-p'yin* (Skr. *Prajñāpāramitā*), corresponding generally to the *Abhidhamma* of the Pāli, in the following recensions: (*a*) in 100,000 verses, *'Bum* (Skr. *Śatasāhasrikā*), 10 volumes (K–N); (*b*) in 25,000 verses, *Nyi-k'ri* (Skr. *Pañchaviṁśatasāhasrikā*), 3 volumes (K–G); (*c*) in 18,000 verses, *K'ri-brgyad* (Skr. *Aṣṭādaśasāhasrikā*), 3 volumes (K–G); (*d*) in 10,000 verses, *K'ri* (Skr. *Daśasāhasrikā*), 1 volume (K); (*e*) in 8000 verses, *br Gyad-stong* (Skr. *Aṣṭasāhasrikā*), 1 volume (K); (*f*) various abridged abstracts, *Na-ts'ogs* (Skr. *Viśva*), 18 tracts in 1 volume.
3. Buddhist Congregation, *P'al-ch'en* (Skr. *Buddhāvataṁsaṅgha*), 6 volumes (K–Ch).
4. Perfection of the Buddha—ethical and metaphysical doctrine entitled 'The Jewel-heap,' *dKon-brtsegs* (Skr. *Ratnakūṭa*), 5 volumes (K–Ch).
*5. Sermons [of Buddha], *mDo-sde* (Skr. *Sūtrānta*), 30 volumes (K–A).
6. *Parinirvāṇa*, or 'Deliverance from Misery,' *Myang-'das*, 2 volumes (K–Kh).
7. Mystical theosophy, *rGyud* (Skr. *Tantra*), 21 volumes (K–Zh).

To these are added:

8. Prayers, *sMon-lam* (Skr. *Praṇidhāna*), 3 leaves.
9. Index, *dKar-chag* (Skr. *Sūchilipi*), 1 volume.

The commentary *Tan-gyur* (vulgarly *Tanjur*) is a great encyclopædic library of ancient Indian lore on metaphysics, logic, composition, arts, alchemy, etc., including the commentaries of ancient Indian Buddhist writers, Nāgārjuna and others, also some texts by Tsong-Kha-pa and other Tibetan saints. Its contents have not yet been fully examined.

L. A. WADDELL.

LANDMARKS AND BOUNDARIES.—

1. Introduction.—A frequent subject of dispute is the boundary-line—between nations, that of their respective territories, between tribes, that of their hunting or fishing grounds, between individuals, that of their holdings. An excellent example of this is found in Gn $13^{5f.}$. It is true that in some instances land disputes are rare because there is a large area available for the needs of all,[1] but in general this is not the case; hence the need of the boundaries being carefully defined by landmarks. We must here distinguish between natural and artificial landmarks. The former mainly mark the bounds of public territories; the latter mainly those of private lands. On the other hand, sometimes carved pillars are set up on the boundaries of States, while natural landmarks—trees, boulders, and the like—may mark the limits of individual holdings. In early times nations and tribes often sought that the boundary of their territories should effectually prevent the encroachment of neighbouring peoples. Such an end was attainable where the sea, a region of ice, a range of mountains, an impenetrable forest, a river, or a waste and desert region existed on a frontier. Hence these natural boundaries are

[1] Cf. C. A. Soppitt, *Short Account of the Kuki-Lushai Tribes*, Shillong, 1887, p. 23; E. Nordenskiöld, *Indianerleben: El Gran Chaco*, Leipzig, 1912, p. 36.

themselves a kind of landmark. Cæsar says of the Teutons:

'It is their greatest glory to have around them as extensive deserts as possible, with their confines laid waste.'[1]

Such boundaries or tracts of waste land formed neutral ground, which at once removed the fear of a sudden incursion,[2] and offered a zone where arrangements—political, commercial, and the like—might be effected.

As an example may be taken that primitive form of commerce called the 'silent trade' (*l'échange à la muette*), in which members of a distant tribe or foreign merchants lay out their goods at a certain place and retire. The natives then come and take them, leaving the equivalent value of their own products. This is frequently done at the boundaries, or on the seashore, itself a frontier-line. Such places being regarded as neutral ground, in course of time regular markets or fairs are held there. It was for this reason that Hermes, whose images (ἑρμαῖ) stood on boundaries, became the god of merchants, just as certain markets held on the frontiers of some Greek States were protected by θεοὶ ἀγοραῖοι.[3]

To such waste territory forming a boundary the name 'mark' was given, and an officer was charged with its defence—the lord of the mark, the marquis—while the dwellers by the frontier were the *marcomanni*.

That the boundary was often a forest is shown in the connexion between the words for 'boundary' and 'wood.' Cf. Old Norse *mörk*, 'wood,' *mark*, 'boundary,' Old Pruss. *median*, 'wood,' O. Ch. Slav. *mežda*, 'boundary.' The words for 'wood' easily took on the meaning of 'boundary.' This was also the case with words denoting fen- or marsh-land.[4]

As will be seen later, stones with or without inscriptions were often set up on the frontier-line of States, on mountains, water-sheds, the sea-coast, etc. Private lands were marked by hewn or unhewn stones, posts, or trees, the last sometimes having ownership marks cut upon them.

2. Boundaries and landmarks in the lower culture.—The Australians have well-defined areas with well-known boundaries, over which each tribe wanders, and from which strangers are expelled.[5] This was also true of the Tasmanians, who seldom moved beyond their boundaries. The tracks through the thicket were marked by small branches of bushes, broken and left hanging.[6] Among the Torres Straits people natural objects constituted landmarks, or such objects as a felled tree, a branch thrown down, and the like.[7] In New Britain the territorial divisions were those of the respective villages, and the boundaries of these were the customary fighting places when any dispute between districts occurred. The boundaries of the lands of which each family was possessed were well known.[8] In Banks' Island the exact limits of property are known. Each piece of land is divided by boundaries drawn from tree to tree.[9] In Fiji the boundaries were apt to contract or expand with the strength of the tribe. Where two tribes were nearly equal, disputes regarding boundaries were submitted to a kind of arbitration. To appropriate a patch of forest was a paltry offence, but to claim another man's plantation was a crime. Hence, where the council of a tribe wished to claim a boundary enclosing a piece of debatable land, men were sent to plant it with gardens. Thus it became theirs and their heirs'.[1] In Samoa the boundary-marks were pathways, rivers, trenches, and stones. At the boundary-line between two villages stood two stones representing two youths who, after a fight, had been changed to stone. Any quarrel had to be settled at these stones.[2] In Tahiti there were well-known landmarks at the boundary-lines, usually taking the form of carved images, or *tiis*. To remove these landmarks was a grave offence.[3] In New Zealand the *kumara* and *taro* grounds were contiguous and divided into portions, carefully marked by stones over which incantations had been said. This rendered them so sacred that to move one brought death to the remover. Streams, trees, rocks, or posts marked the bounds of the hunting area, which was held in common.[4] In New Zealand and elsewhere in Polynesia fields were protected by hedges, walls of unhewn stones, or fences, the making and repairing of which occupied much time.[5]

In Africa great care is taken to define the boundaries of provinces or of private possessions. Thus in the province of Oran there are heaps of stones at the frontiers of several tribes, where oaths are taken by parties in cases of litigation.[6] R. H. Nassau, writing of W. African tribes, says that, when a family settles on land, the place is marked out by trees and stones as boundary-lines.[7] Among the Washambala, Banaka, etc., pathways, trees, rivers, rocks, etc., are the landmarks of parcels of land and plantations; though in some cases the boundary-lines are imaginary, they are usually respected.[8] Among the Wadshagga, sacrifices are made at the boundaries when war threatens, and also at other times where a road leaves the territory, to prevent the entrance of an enemy.[9] Among the Yoruba the boundaries of farms are marked by heaps of earth in which certain trees are planted. One of these, the *akoko*, is a common boundary-mark, and is sacred to the god Ogun. Kola trees growing in the forest often mark the site of old farms and afford proof of ownership.[10] R. E. Dennett says that mounds of earth and leaves in the woods mark the frontiers of two provinces. Natives add to the heap, so that they may not be accused of bringing anything evil into the next chief's country.[11] The Asi of Equatorial Africa indicate the boundaries of property by planting trees in line, by hedges, or by stones sunk deep out of sight. The *nijama*, or executive power, decides in disputes as to boundaries. Village boundaries of trees and stones throughout this region are sacred.[12] In S. Africa with the Basuto the bounds of fields were carefully marked, and disputes were settled by the chief. Among the Baronga, rivers, trees, and other natural objects mark the boundaries of different clans. To define those of gardens, a ditch a foot deep is dug all round the field, and it can be traced

years after even when the field has become fallow.[1] In general, trespass is resented and is a crime or the cause of frequent quarrels and bloodshed, but among the Kafirs it was permitted because, all having gardens and cattle, all were liable to it.[2]

Among the N. American Indians disputes regarding boundaries were also a constant source of quarrel. W. H. Dall says of the Indians and the Innuit that they were jealous of their boundary-lines—usually the summit of a watershed. Any one found on the wrong side was liable to be shot.[3] Tribal boundaries were rivers, lakes, mountain ranges, trees, stones, and other natural features. A boulder marked the limit of the Shevwits' land; a deep spring was the most prominent natural object on the line between the Onondagas and Oneidas.[4] The Iroquois ran straight lines as boundaries, marked here and there by well-known objects. Occasionally, as among the Californian Indians, Pueblos, Haidas, and other north-west tribes, artificial boundaries—posts and stones—were set up to mark the hunting and fishing grounds. Among the Serrano Indians the patches of land belonging to an individual or, more likely, the *gens* were indicated by trees with marks corresponding to those painted on the owner's face, so that they could be instantly recognized. Among the Wyandots the women of the tribe distinctly marked the household tracts after they were partitioned among the householders, out of the common land of the *gens*.[5] In modern treaties with Indians the bounds of their lands are carefully noted and described.[6] In S. America it is said of the Indians of Guiana that, while they have no clear tribal boundaries, yet each tribe lives in a separate district and allows therein no interloper from another tribe.[7] In Brazil the boundaries of each tribe were marked by trees, streams, and rocks, and also by artificial landmarks. The *pajés* took an active part in defining these, with much magical ritual, etc. Bark strips, rags, and baskets were sometimes attached to these landmarks. The trespasser was killed on the spot when caught.[8]

Among the aboriginal tribes of India the Todas mark the boundaries of their villages by stones.[9] Among the village peoples of N.W. India the arbitrator who walks the boundary does so with a raw cowskin on his head—the cow being sacred—and is under a solemn oath to decide correctly. He holds five sticks in his hand to show that he is the representative of the Pañchāyat. Boundaries and cattle paths are religiously preserved, and the curse is uttered: 'May the man who destroys a boundary, a cowpath, or a ditch have his lands sown by others, or may they lie waste.' A method of ordeal for fixing boundaries consisted in the arbitrator walking the bounds with a red-hot ball on his palm, protected by pipal leaves. If he was not burned, his decision was accepted.[10] In Mysore disputes as to boundaries were settled by the *holeya kuluvādi*, who held a ball of earth in his hand as he walked. If he diverged even accidentally from the true line, the ball went to pieces, and it was believed that he would die in fifteen days. In Jeypore the arbitrator had to eat earth. If he died within six months, this proved that his decision was wrong, and that the earth-goddess had punished him.[1] In some parts of India a goat is led along a disputed boundary, and the place where it shivers is the true limit.[2] Among the Abors the boundaries of clearings are marked by upright stones, and property thus defined is respected. The Bhils surround their fields with fences of boughs and bamboo.[3] Among the Kandhs boundary-lines, when determined by the public tribunals, are marked by stones set up in presence of the *abbayas*, or patriarchs. They are sacred to Sundi Pennu, god of boundaries.

A prayer to him asks that disease be kept from the boundaries, that hostile gods and tigers may not cross them, that waters from the higher lands may be attracted to them, that cattle may not stray beyond them, etc. A fowl or goat is sacrificed by the priest at a point on the boundary fixed by ancient usage. The god is common to two parties whose lands join, and is supposed to help the one whose cause is just when a fight takes place between them.

The flesh of human sacrifices to the boundary-god as well as to the sun- and war-gods is strewn along the boundary-line. A boundary-god also exists among the Gonds.[4]

The Veddas had well-defined boundaries to the hunting grounds of each group in the jungle, and these were seldom trespassed on. Where it was not possible for natural features—stream or hill—to mark the boundary, definite marks were made on the trees along the line.[5]

3. Landmarks in the higher culture.—(*a*) Among the *Semites* the landmark was of supreme importance both for the State and for the individual owner. The Babylonians called boundary-stones *kudurru*, though the name was also applied to the land within the boundary. They were sacred to certain divinities, but not themselves representatives of divinity like the Greek Hermæ, though the divinity exercised power, the power of the curse, through them. Among gods to whom boundaries and landmarks were peculiarly sacred were Nabu ('Nabu preserves the limits of the fields'), Papu ('lord of the boundary,' period of Ḥammurabi), Ninib and Nusku ('the name of this stone is Ninib and Nusku establish the bounds'), and Šamaš ('Šamaš hates those who falsify boundaries and weights'). The importance of the just boundary is also seen in the incantation texts used by the exorcizer as he tries to discover what evil has been done by the sufferer. 'Has he fixed a false boundary, Not fixed a just boundary, Has he removed a boundary, a limit, a territory?'

The *kudurru*, which probably had some phallic significance, varies in height from one to several feet. The inscription begins with the name of the stone—*e.g.*, 'Ninib and Nusku establish the bounds.' Then follow the measurements of the field and a description of the occasion of the gift of it by a king to its owner. To this succeeds the appeal to the gods—*e.g.*, 'Whoever overthrows the grant of this field or causes it to be seized, may Anu overthrow him.' Other gods—Enlil, Ea, Sin, Šamaš, Ramman—are asked to do him various evils: 'Ninib, lord of boundaries and boundary-stones, tear out his boundary-stone. 'Whoever removes this stone, in the dust hides it, burns it with fire, casts it into water, shuts it up in an enclosure, causes a fool, a deaf man, an idiot, to take it, places it in an invisible place; may the great gods who upon this stone are mentioned by their names curse him with an evil curse, tear out his foundation, and destroy his seed.' Then follow the names of the witnesses present at the sealing of the tablet.[6] On the *kudurru* are usually representations of serpents, scorpions, and monsters. These may represent the demons to whom the soil

belongs, and who would presumably resent trespass or removal of the landmark after the owner had duly propitiated them. Others have seen in them representations of the signs of the zodiac—a theory which receives support from the representation of heavenly bodies and shrines (? houses of the heavens) on the *kudurru*. They would then have reference to the time at which the grant was made.[1]

Stones were also set up at the frontiers by kings who had extended their territories or restored the boundaries of earlier times. Such landmarks are still found *in situ*. The well-known 'stele of the vultures' delimited the respective territories of two city-States.[2]

Among the Hebrews, as among other Semitic peoples, stones, whether monoliths, circles, or cairns, were sacred, and were used to mark places where certain events had taken place, burial-sites, and sacred places. Whatever the origin of the *maṣṣēbāh*, or upright stone, may have been, boundary-stones were included under this title, though a heap of stones might also form a boundary-mark. In Gn $31^{45ff.}$ E's narrative shows that a *maṣṣēbāh* was erected as a witness of the covenant between Jacob and Laban on the Aramæan frontier, but J speaks of a heap of stones. Both had the same purpose (v.[52]), as a reminder that there was to be no transgression beyond the limit thus marked out (cf. Jos $22^{10ff.}$). Boundary-stones were also used to mark private property in land, and were not to be removed (Dt 19^{14}, Pr 22^{28} 23^{10}). The sacredness of landmarks was enforced by a curse on the remover of them (Dt 27^{17}), and such removal was regarded as a peculiarly wicked action (Hos 5^{10}, Job 24^{2}). Such landmarks are still common in the East to-day, and are regarded as sacred.[3]

(*b*) In *India*, besides the instances from present-day tribes already cited, the evidence from the older law-books is suggestive. The sections regarding landmarks and boundary disputes are full of detail. Such disputes were to be settled by neighbours, by people from neighbouring villages, by the elders, by men of a variety of occupations, or by the king. Witnesses were called and duly sworn. They were to have earth on their head and to wear chaplets. False witnesses were punished by a fine. The boundary-line was to be marked by trees of specified kinds, ant-hills, artificial mounds, hills, thickets, gardens, roads, dikes, tanks, wells, cisterns, temples, etc. In the ground were buried objects which would not decay —potsherds, charcoal, bones, stones, bricks, enclosed in vessels. These were pointed out to youths and children, who were to show them to their children in after years. The destroyer of a boundary-mark was to be punished by mutilation.[4]

(*c*) In *Egypt*, where the encroachments of the Nile caused the effacing of boundaries, there were continual government surveys of territories, and careful records were kept in each district. Herodotus, Plato, Strabo, and others ascribe the origin of geometry to this need of adjusting the measurements of the land after each inundation. Boundary-stones were set up along the limits of estates, and were inscribed with the name of the tenant at the date of their erection, and other details—*e.g.*, the nature of the soil, the situation, etc., or the name of the reigning Pharaoh. Such stones also received a name, which, once given, never altered for all time. Boundary-stones with inscriptions also marked the frontiers of the land, and were set up by the kings after each new conquest. One of these says that all who maintain the boundaries will be called 'my son.' Temples occasionally stood on the frontier line. The Negative Confession in the *Book of the Dead* says nothing of removing landmarks, but the equivalent, 'I have not falsified the cubit of land,' occurs.[1]

(*d*) In early *Greece* heaps of stones (ἑρμαῖος λόφος, ἕρμαιον) or erect stones (phallic), or both together, represented Hermes, god of commerce, of merchants, of travellers, etc., and were placed to mark paths, as well as frontier-limits and bounds of private lands. These gave place in many cases to quadrangular stones, surmounted by the head of Hermes and with an erect φαλλός, which were set up at street-corners, before houses, etc.[2] Pausanias describes the territorial boundary-stones, or ἑρμαῖ, marking the frontiers on Mt. Parnon.[3] Plutarch records how Theseus set up a pillar between Peloponnesos and Attica, on one side of which were the words: 'This is not Peloponnesos but Ionia,' on the other: 'This is Peloponnesos, not Ionia.'[4] Boundary-heaps may still be seen on the frontiers of Laconia.[5] Altars or grave-mounds occasionally marked boundary-lines.[6] Boundary-stones also separated public from private lands, marked off roads, temple-precincts, burial-places, as well as private lands.[7] They were under the protection not only of Hermes (Ἑρμῆς Ἐπιτέρμιος), but also of Ζεὺς Ὅριος, or, as among the Dorians, Ἀπόλλων Ἀγυιεύς, protector of streets and roads,[8] and in Greece, as elsewhere, it was dangerous to remove a landmark. Plato says that 'one should be more willing to move the largest rock which is not a landmark than the least stone which is the sworn mark of friendship and hatred between neighbours.' The consequences will be doubly fatal—a penalty coming from the gods and one coming from the law.[9]

(*e*) Among the *Romans* the poets looked back to a golden age when there was no private property in land and hence no boundary-stones.[10] To Numa was ascribed the first law regarding landmarks (*cippi terminales*). Stones sacred to Jupiter Terminalis or Terminus were to mark the limits of property, and yearly sacrifices were to be offered to them at the Terminalia. Any one removing such stones might be slain without any guilt being incurred by the slayer. He, as well as his cattle, was devoted to the god who guarded or cursed boundaries.[11] The earliest form of the boundary-mark was a post or stone; later the Greek form of the Hermæ was adopted. This landmark represented Terminus, god of boundaries, and, as Ovid says, possessed divinity.[12]

When it was set up, a trench was dug and the blood of a sacrificial victim poured into it. Then the body of the victim, along with incense, honey, wine, corn, etc., was consumed by

fire in the trench, and on the ashes the stone was placed.[1] On the Terminalia the possessors of adjacent lands sacrificed a lamb at an altar set up by the boundary-stone, and sprinkled the stone with its blood. The stone or image was garlanded by each on his own side.[2] Public sacrifices were also made at a boundary-stone by the sixth milestone on the Via Laurentina.[3] Curses were sometimes inscribed on landmarks against those who removed them.[4]

Besides marking private lands, boundary-stones also marked the limits of territories, public lands, etc.[5] In later times the removing of landmarks was punished by a fine of 5000 sesterces, and any one could lay the accusation. Hadrian enacted banishment for persons of higher degree, and for those of lower degree forced labour for two or three years.[6] Fearful curses had already been pronounced by the Etruscans against the remover of landmarks. The gods punished him by wasting disease, ruined crops, extinction of his family, etc.[7]

(*f*) Among the *Teutons* in the earliest times, according to Cæsar, a tract of waste or forest land was preferred as a territorial boundary.[8] Other natural features served as boundaries, and artificial landmarks were also used:

'Terminales lapides Alamannorum et Burgundiorum confinia distinguebant.'[9]

As to private property, Tacitus[10] and Cæsar[11] say that holdings were re-partitioned out to all once a year. This communal arable land divided into separate fields belonging to different owners was called the 'mark,' and in later times was surrounded by a fence or ditch, its limits being also shown by stones, posts, or trees, planted with great ceremony. In the case of the lands of the free-lord, he with his neighbours made a circuit of his domain, and marked the limits by cutting marks on trees, by stones, or by mounds of earth. The boundary-marks on trees and stones (often a cross) are frequently referred to in old documents. Both stones and trees forming landmarks were sacred. Even to break a twig off the latter was not permissible, and right down through the Middle Ages very severe and cruel punishments were meted out to those who removed a landmark. In folk-belief, ghosts wandering through the fields or the Jack o' Lantern were thought to be the spirits of those who had committed this crime or who had made false measurements of land. Certain divinities were guardians of boundaries—Thorr, Frea, and Holda—and in folk-sagas there are tales of boundary-ditches having been marked out by the spindle of a goddess. Holy fire was carried round boundaries, and the *Indiculus Superstitionum* (23) speaks of the custom of ploughing a furrow round the bounds of villages.[12]

(*g*) Among the ancient *Celts* in Gaul some of the many *simulacra* which Cæsar[13] describes as representing a Celtic Mercury, and which were probably menhirs or heaps of stones, may have been used as boundary-marks, as they were in later times (§ 7).

The Irish Celts are said in the *Leabhar na hUidhre* to have had no divisions of land, and therefore no boundaries, until the time of Aed Slane (A.D. 651–694), when they were introduced because of the increasing population. The Brehon Laws define a large variety of boundary-marks—*e.g.*, stones of worship, memorial stones, trees, stakes, mounds, ditches, rivers, lakes, wells, and roads—and give details of the fines for unlawful possession of lands.[1] In Wales the laws speak of the three 'stays of boundaries'—privilege, proprietary title, and prior occupancy—but elsewhere principal waters, a lawful *randir*, and a dwelling.[2] Three things preserve a memorial of lands and stand as witness—a fireback stone, stones of a kiln, and a mounting stone, because the mark of the kindred remains on them. An action for theft arises against the man who removes these, a forfeit of life attaching to all who destroy a strong testimony.[3] Trees, stones, ditches, and rivers are also mentioned as marks.[4] A fine is levied against any one who ploughs up a ditch or removes a stone cross, or timber, or anything else preserving a boundary, and he must restore it to its former state.[5] In disputes the church fixes the boundary to the court, the court to the country, and, in cases of lands belonging to those co-equal in privilege, the oldest men are to assign the boundary after inquiry of witnesses. The judge and the king in such cases receive fees.[6]

(*h*) In ancient *Mexico* each domain was carefully measured out, marked, and its limits shown on a register kept by an officer in each district. Separate fields were enclosed with hedges or walls. Those who changed the limits of private lands or removed landmarks were put to death.[7] Similarly in *Peru* the lands were carefully divided and marked out, and the remover of a landmark was punished severely.[8]

4. Landmarks and the curse.—As many examples cited above have shown, a curse is invoked on the remover of the landmark, and, as in the Babylonian instances, the gods are desired to bring it about. The gods are, in fact, frequently associated with boundary-marks, and protect the owners of land against those who would take some of it.

In the Finnish *Kalevala*, Väinämöinen himself divides the land into arable patches. The boundary-stones between Sweden and Russia were believed to have been hewn by a wood-spirit.[9]

It is probable, however, that in earlier times the curse was not brought about by a god, but was inherent in the landmark itself and worked through it upon the trespasser. Thus among many savage tribes not only articles of property, but fruit-trees, growing crops, etc., are protected by charms, fetishes, and the like, placed on or among them. These are recognized as tabu signs; but, if any one disregarded them, some terrible result would follow. In effect, a curse is inherent in them and works automatically. In many instances the charm is hung from a pole, post, or fence, or the fence itself is tabu. These are then a species of primitive landmarks, to disregard which produces an automatic curse, as in New Britain, where a spell said over a fence produces serious trouble to a thief.

Among the natives of the Congo, rows of stakes are set round fields, and on them the medicine-man ties bundles of herbs, which cause death to the trespasser or thief.[10] The Ewe fasten amulets to long sticks, placed in a conspicuous position among

the crops.[1] Among the Bangala such sticks with charms attached mark the boundary between separate owners' fields, and the charms are protective.[2] Among the Koita of British New Guinea a *tora*, or tabu sign, set up on a path or in a garden with the consent of the older men has no magical power, but it is 'native law,' and, if violated, would bring the full force of public opinion against the offender. Gardens are tabued by planting sticks with a length of creeper between, to which is attached a tabu sign with a certain amount of magical force.[3] In Fijian gardens reeds were thrust into the earth, their tops brought together, and set in a banana or a nut. These would produce boils on the thief.[4] In Samoa the 'cross stick tabu'—a stick fastened horizontally to a tree—indicated the wish of the owner that the thief might incur disease.[5] In New Zealand *kumara* grounds and crops were made *tapu*; or a chief would tie one of his garments to a pole to make a place tabu.[6] In Madagascar poles with a bundle of herbs are placed on roads, fields, etc., to indicate that these are tabu.[7] Among the Cumanas, and also the Juris of S. America, a gap in a hedge round a field was merely protected by a thread tied across it. The trespasser who disregarded it would die.[8] In S. India stones called the Five Pāndhus are set up in fields and regarded as guardians of the crops.[9]

When gods of boundaries were evolved, the curse was visited by them directly, not through the stones, etc., which were now merely regarded as sacred to them.

5. Beating the bounds.—The custom of riding the marches, or beating the bounds,[10] is of ancient origin. Its purpose was to make sure that the bounds and marks were not tampered with, to restore them when displaced, and also to establish them in the memory of the folk. It occurred annually, or every seven years, and in Christian times usually at Rogation-tide or Whitsuntide, Easter, or May-day. Probably the older processions of divine images for the fertility of the land were connected with these, if the procession went round the boundaries (see CROSS-ROADS, § 3). Though going round the bounds had a religious character—in mediæval times the clergy accompanied it with cross, banners, and bells, and gospels or passages from the lives of saints were read at halting-places, *e.g.* where a cross stood, or an altar was erected near a boundary-stone and mass was said and prayer made for the fruits of the earth—there was also a good deal of merriment, eating, and drinking, and there were numerous customs observed in each place. That of striking some of the younger folk against the landmarks, whipping them, throwing them into a boundary-stream, etc., is well known, and had the intention of fixing the parish or manorial boundaries in their minds. The custom is still in existence in Russia and in many parts of Germany, and has been revived in England in many parishes. In Scotland it occurs at Lanark ('riding the marches'), and at Hawick and Selkirk ('common-riding').[11] In England, after the Reformation, while much of the mediæval ceremonial was dropped, the religious character of the procession was not lost. According to the injunctions of Queen Elizabeth, at the stopping-places the curate had to admonish the people to give God thanks, the 104th Psalm was said, and the passages regarding the removal of landmarks were read (Dt 19[14] etc.). These customs are referred to in contemporary writings.[1] They correspond to the processions round the fields and lands on the Roman Ambarvalia in May for the averting of disease and blight, an object doubtless also sought in beating the bounds, as it still is in the processions round the fields in Italy in Rogation-week.[2] The boundaries were also renewed at the Ambarvalia, and there may have been a beating of the bounds of each *curia* at the Fornacalia.[3]

6. Superstitions regarding landmarks.—Besides the general belief that to remove a landmark is dangerous, other superstitions are sporadically connected with them. In Teutonic and Scandinavian lands the Jack o' Lantern is the ghost of a former remover of landmarks who now haunts them and the boundary-lines. In popular Hindu belief the ghost of a former proprietor will not allow people of another village to encroach with impunity on a boundary. *Bhūts* also haunt boundaries, and a stream of liquor is poured round these by the priest.[4] In S. India sorceresses are believed to ride round boundaries of seven villages by night on a tiger.[5] In the Isle of Man witches were believed to practise their evil deeds at the meetings of three boundaries or at cross-roads.[6] In the Hebrides blight could be removed from cattle by bringing the carcass of one of them near a boundary-stream; and water from such a stream was used with silver to remove the curse of the evil eye.[7]

Myths or folk-tales are often told regarding existing landmarks or boundaries and their origin. Where megalithic blocks have been utilized as landmarks, they are thought to have been placed there by a saint or by conquerors of the land.[8] There are legends regarding the assigning of specific boundaries in cases of former disputes, as at Uri and Glaris in Switzerland, and in Brittany.[9] The Mikirs have a myth relating how the gods marked the limits of their creative work by setting up four posts to be the boundaries of the world.[10]

7. Landmarks other than boundary-marks.—In different parts of the world heaps of stones, unconnected with boundaries, form a kind of landmark where specific acts are performed by the passer-by, most usually that of adding a stone to the heap.

(*a*) The *ἑρμαῖος λόφος* in Greece, connected with the cult of Hermes, was a heap of stones marking roads, and to it each wayfarer added a stone. Later myth found its origin in the heap of stones formed when Hermes was stoned.

Such heaps are found among many savage peoples, as well as the custom of adding a stone, or saying a prayer, or making an offering at them.[11] Strabo describes such heaps of stones on roads in Egypt.[12] They are common in Tibet on the tops of passes, where they have been erected by devotees, and each passer-by adds a stone for good fortune.[13] They are found among the Kirghiz in similar positions and where a Muhammadan saint has been buried, but also elsewhere, and offerings

of all kinds are made at them.[1] In the Himālaya region they are venerated by Hindus, Buddhists, and Muhammadans, and offerings are made at them.[2] Heaps of stones were known among the Hebrews (Pr 26^{8} RV), and were also used to mark burial-places (Jos 7^{26} 8^{29}, 2 S 18^{17})—a custom common elsewhere.[3] They are well known all over the Semitic region. In N. Africa they are found on passes, often where the tomb of a saint is first seen, or they are regarded as the tomb. Others are commemorative, or mark routes. To the former, and to those which mark where a man has been killed, the passer-by adds a stone.[4] In the W. Highlands a cairn is erected where a suicide or sudden death has taken place out-of-doors, but in earlier times the cairn was erected as a burial-mound, and each passer-by added a stone. Hence the saying: 'I will add a stone to your cairn.'[5]

Although the added stone is an offering or for good luck and the like, it is not improbable that its primary intention, whatever the origin of the cairn may have been, was that of a rite of riddance of danger or the contagion of evil.[6]

(*b*) In many parts of the world stone circles serve a variety of purposes, and must form conspicuous landmarks. The circles dating from pre-historic times and found in large numbers in Great Britain and elsewhere—*e.g.*, N. Africa, Syria, India, etc.—are generally burial-sites.[7] In the Cross River district circles of stones carved in human form occur, and are said to be deities.[8] Among the S. Massim stone circles mark the places where the men of the village meet for talk, and circles called *gahana* were used for cannibal feasts.[9] Circles also occur in Gambia[10] and in Melanesia.[11]

(*c*) In many cases stones represent divinities, or a regular cult is paid to sacred stones.[12] These stones are landmarks in the sense of being rallying-places for worship.

(*d*) The great megalithic monuments (apart from circles) which are found in Europe, Asia, and Africa—menhirs, alignments, dolmens, etc., set up as memorials of events, as marking burial-places, or the scene of a slaying (*e.g.*, among the Garos and the Todas)[13]—whether the work of one or of many races,[14] must have been noticeable landmarks through the ages, and many curious superstitions show the reverence in which they were held.

(*e*) Burial mounds (*e.g.*, the tumuli of pre-historic times, Babylonian burial-mounds, the Hindu *dāgoba* or *stūpa*), tombs (*e.g.*, the pyramids), monuments of all kinds, temples, churches, and the like, standing out conspicuously from the surrounding landscape, often form landmarks or guides to travellers.

(*f*) Among lower races rocks, trees, and the like often mark the scene of traditional or mythic events—*e.g.*, among the Arunta, where they mark events of the Alcheringa (*q.v.*) period,[15] or in Guiana, where engravings on conspicuous rock faces may commemorate striking events.[16] Such engraved rocks are also common over the Semitic area, and act as landmarks.

LAOS.—1. Introductory.—French Laos, which embraces only about a third of Laos proper (Muong Lao), was constituted by the treaty concluded between France and Siam in 1893. It is bounded on the N. by China, on the E. by Tong-king, on the S. by Cambodia, and on the W. by the Mekong, which separates it from the Shan and Burman States occupied by Britain, and from Siamese Laos. French Laos is inhabited by the Thai race, the most important group of whom are called Laotians; and by the half-civilized tribes called Mois by the Annamese, Phnôngs by the Cambodians, and Khās by the Laotians (for these tribes see art. INDO-CHINA).

The Laotians are akin to the Thais of S. Tong-king and the Siamese. Their origin and history are very obscure. Their royal chronicles, the data of which are often not above suspicion, mention a first king of Laos who came from India, another who came from Cambodia, then four Khā kings, and, finally, the intrusion and decisive seizure by the Laotians, who claimed to have come from the valley of Nam-hou. These immigrants, or conquerors, acquired several independent principalities, the two greatest of which seem to have been the kingdoms of Vien-chang and Luang-Prabang. Constantly at war, and attacked at the same time by Siam and Cambodia, they led a troubled and precarious life. In the 19th cent. the Siamese destroyed the kingdom of Vien-chang in order to annex it, and left only a nominal independence to the kingdom of Luang-Prabang, which, continuing in the same status under the French, is to-day the centre of the Laotian race.

2. Habitat.—The Laotians settled by preference along the river-banks and in the neighbourhood of rice-plains. They built huts on piles 5 to 6 ft. high, the huts measuring 20 to 40 ft. by 12 to 20 ft. The door, which nearly always faces the east, and to which they mount by a ladder, has a sort of balcony-verandah in front of it. The roof is made of palm-leaves, straw, or bamboo tiles. The furniture consists of kitchen utensils, tables, mattresses, mats, and chests for keeping clothes. Under the house are the weaving-loom, the domestic animals, and the poultry-yard; a little shelter at the side serves as a kitchen; the rice-granary is quite close, and always built on piles for fear of rodents.

3. Appearance and character.—The Laotians are well endowed as regards physical type; they have well-proportioned figures, and frank, open faces; and the young women especially have a graceful, supple carriage. They are of a lively and often refined intellect, with a certain aptitude for poetry; they are extremely pleasant and sociable, gay and happy-go-lucky, but extraordinarily indolent and sensual. The Laotian's indolence is a matter both of principle and of temperament: once he has got the means of living and amusing himself, he considers every kind of exertion not only useless but blameworthy. It is no use to look to him for the economic and intellectual transformation of Indo-China. He is a good builder, but a mediocre agriculturalist, often depending on hired labourers or slaves to work his rice-plantations; it is from trade and hawking principally that he makes his living. He is the usual intermediary between the 'savages' and the more civilized races. For six months out of twelve the Laotian does nothing—he does not even hunt or fish. The women work much harder: it is they who sow, prick, reprick, and harvest the rice, weave clothing, fetch water and wood, pound the rice, and, in addition to the multitudinous cares of housekeeping, manage the farm-yard.

4. Religious beliefs.—The Laotians, like the Cambodians, profess Sinhalese Buddhism. Although their pagodas are well supported and their bonzes well paid, their worship seems less fervent, and the morals of their clergy much less pure, than is the case in Cambodia. The bonzes mix freely with the laity in the festivals, eat and joke with them, smoke in public, breathe with impunity the flowers that abound in all Laotian solemnities, sometimes drink fermented liquors, accept objects directly from the hands of women, and even go to cut wood with them. They are shown less respect and are also granted more indulgence in their failings: for fornication, they are expelled from the pagoda, sentenced to pay a fine, and can then marry their accomplice. In Cambodia, the same offence would entail death or penal servitude for life.

The Laotians are Buddhists by tradition; but their most devoted worship is given to the good or bad spirits (*phi*), who animate all objects and beings, and preside over all the actions of human life. Hence spring innumerable beliefs and rites which have nothing in common with Buddhism.

When a man is building a house in Laos, he must fasten flowers, banana-shoots, and sugar-canes to the pillars bounding the part that is to be the sleeping-apartment, and also put a spinning-wheel and some threads of cotton at the pillars beside the foot of the bed, and a reel and some threads of silk at those beside its head. Before settling down in his house the proprietor invokes the deities with offerings and scented sticks. When a Laotian is going to work a rice-plantation, before he traces the first furrow and after he has his buffaloes yoked, he makes libations of lustral water, and offers a hen's egg, a tray of sweetmeats, and two betel-pellets to the spirits protecting the soil.

At the transplanting of the rice, he erects a little trestle in the middle of his field to serve as an altar; this remains until the close of the harvest. On this trestle he lays a boiled chicken, some cakes, and four betel-pellets, and plants seven stems in front of it; then, after a libation of alcohol, he invokes the deities as follows: 'On this propitious day I transplant my rice. Make it grow in abundance and full of grain, let it not be dried up, let it not wither away as it stands.' When the rice is matured, he decorticates a little of it to offer to the deities in order that they may protect the harvest from rodents. When the harvest is gathered and the rice put in stacks, the Laotian sets up a pole at the top of the stacks, fastening on the end of the pole the seven stems that had been planted in front of the trestle. A sacrifice is also made to the threshing-floor on which the rice has been trodden. Another more solemn sacrifice is made before storing the rice in the granary: the *phi* receive an offering of alcohol, rice, various dishes, and cakes, which the invited relatives and friends consume afterwards, tying their wrists together with cotton threads.

Like the Cambodians, the Laotians believe in the existence of a water-spirit Nöok (cf. Annamese, *nu'ớc*, 'water'), a huge water-dragon, with a human head according to some, a cock's or ox's head according to others, which watches for all who cross the water, makes them fall, paralyzes their movements, and, after sucking their blood, throws them up on the shore some days after, bloodless and lifeless. Even elephants cannot resist it unless the elephant-driver himself gives them a wound, the blood of which appeases the dragon. Before any dangerous voyage, the Laotians sacrifice a live hen or goat to Nöok. They also sacrifice 'to the boat-heads,' or spirits of the junks (*ya néang*). Laotian sailors preserve a strict silence in presence of a cataract or waterfall: any cry, crack, gunshot, or sound of an instrument would offend the spirit by appearing to rival its voice.

In the regions of *bo*, or salt-wells, the business of extracting the salt is preceded every year by a ceremony which brings all the salt-makers of the *bo* together to get permission from the tutelary deity to descend into the wells. They sacrifice a prescribed animal—a pig, a tortoise, or a buffalo, according to the year. Besides this, the workers are bound to certain abstinences: they must wear no head-dress, must not put on a head-band, must not protect themselves beneath parasol or umbrella; they must avoid all sexual relations; and, although they may move about and work in the *bo*, they are forbidden, as, indeed, is everybody, to 'cut' the *bo*, *i.e.* to cross it on foot, in a carriage, or on horseback. Any infringement of these rules is punished by a fine of a flask of brandy and an animal of the kind sacrificed at the beginning of the year. These offerings are given to a woman of the next village who has declared herself, according to certain regulations, possessed by the spirit of the *bo*, and who is the incarnation of its divinity. In certain districts, if a stranger dressed in red or black visits the *bo*, the spirit of the well is deeply offended, and would stop the flow of water if it was not appeased by a certain stated sacrifice. Because of an analogous belief the metal-workers make an annual offering at the beginning of their smelting operations to Phraḥ Bisnukar (=Skr. Viśvakarman), patron of artisans, of a woman's *langūti*, a hair kerchief, a comb, a bracelet, a boiled chicken, some alcohol, candles, and scented sticks.

Hunters sacrifice to their nooses and their nets. As a rule, if they want to be successful they must avoid talking among themselves, borrowing from each other, holding a pot, or walking over their weapons.

The Laotians not only believe in the spirits of natural forces, but they dread ghosts and reckon among the worst of evil spirits women who have died in child-birth, still-born children, and individuals who have died a violent death—who have been drowned, burned, assassinated, have committed suicide, or have been accidentally killed or devoured by wild animals.

5. Magic and sorcery.—Like all Indo-Chinese, the Laotians believe in magic and sorcerers. These sorcerers may be male (*phi kaḥ*) or female (*phi pop*). Their power comes to them by the direct or hereditary possession of a spirit, or else by initiation into magic. They also believe in tigress-women (the *směr* of the Cambodians [see CAMBODIA, vol. iii. p. 158ᵃ]), in spells and love-charms (lip-salve with wax, red jasmine flower), in incantations and amulets. In spite of the wonderful gentleness of the race, sorcerers who, voluntarily or involuntarily, have incurred the charge of witchcraft are sometimes put to death by the terrified people. They combine magic and medicine, like nearly all the Indo-Chinese, and, except for certain harmless and well-known ailments which alone are put into the hands of the doctor, and cholera and small-pox, which are too well known to be attributed to the ill-will of an individual, all serious or puzzling illnesses are the work of witchcraft, and the one thing that they require is the intervention of a witch-doctor.

6. Festivals.—The Laotians are even fonder of festivals than of idleness, and they bring to these rejoicings the sensual gaiety which is their characteristic. The profusion of flowers, sky-rockets, and kites is remarkable. We find in Laos all the great Buddhist solemnities of Cambodia and Siam: New-Year festivals which last seven days; hill-festivals; festivals for the opening and closing of the ecclesiastical retreat, or *vosa*; festivals for reunion with ancestors; a festival with great regattas at the end of the rainy season; the festival of flowers which a village offers to the pagodas of another village; the great annual festival of the offering of presents to the bonzes; and the occasional festivals at the ordination of bonzes.

7. Marriage customs.—The relations of the sexes before marriage are perhaps the most characteristic peculiarity of this sensual race. Boys and girls associate with absolute freedom; they walk together, and provoke each other to poetical combat, the foundation of which is a vivacity which is witty and licentious rather than sentimental. On moonlight nights, along the banks of the river, a band of women walk about in the evening singing improvised couplets to which a band of men, following at a respectful distance, reply. The Laotian girl is not responsible to any one for an account of her virginity. Her parents and public opinion seem to require no account from her, but she is protected by the *peng huhön*, 'sale, conviction for the advantage of the house,' a domestic law which requires a settled fine for every attempt against her person of which the girl complains. In spite of their loose customs, the Laotian girls usually marry between the ages of fifteen and eighteen. As in Cambodia, marriage consists in the request made by intermediaries on the part of the youth to the girl's parents; the regulation betrothal presents; an examination of the horoscopes of the future bride and bridegroom to see that the projected union is not unfavourable; the official betrothal, which cannot be wilfully broken without the penalty of the law; the dowry, or 'bride-price,' provided by the bridegroom; and the wedding with the expenses all paid by him. The dowry varies, of course, with the station and charms of the bride and the means of the suitor, but it is not honourable for a man to marry without offering a dowry for the woman of his choice. A marriage often costs the man who contracts it from 1200 to 1500 francs. The names

and ages of the couple, those of their parents, and the money and presents given on the occasion of the wedding are put in writing, and this constitutes a sort of marriage contract. The marriage-ceremony includes a rich banquet, with oblations to ancestors, the passing of cotton threads over the left wrist of the bridegroom and the right wrist of the bride, and the drinking of a mouthful of alcohol by both of them from the same cup. Next day it is repeated identically at the house of the bridegroom's parents. At Luang-Prabang the question of dowry and presents is discussed directly by the girl and the young man. The new couple usually live near the girl's parents, sometimes with them; in the latter case, the dowry to be given by the youth is reduced because of the work that the young couple will do.

Polygamy exists in Laos, but is practised only by the wealthy. Divorce is common and easy; it takes place almost always by mutual consent, the wife claiming her own personal belongings and the share of the acquisitions after marriage which comes to her by right, and the husband not interfering unless she unlawfully carries off everything. The woman has full right to divorce if her husband leaves her for three years without news of him.

Adultery, which is rare, is punished by death in theory, in practice by a fine paid by the wife and her lover to the husband.

8. Disposal of the dead.—The Laotians generally burn their dead; only the poor bury them. Before the French occupation women dying in child-birth and persons dying a violent death or from an internal complaint used to be abandoned on a current of water; but to-day only a pretence of this performance is gone through, and they are buried. Cremation takes place some days, or some months, or even a whole year after the death, according to the means of the heirs. In cases of a long interval, the corpse is often buried until the appointed ceremony; among the rich, it is put in a coffin hermetically sealed except for a small opening through which a long bamboo tube carries the putrid vapours beyond the roof; this coffin is placed under a special canopy on a rich catafalque, and the bonzes stand round it to pray in turn. During the whole time that the coffin is exposed there are friends and relatives in abundance at the house of the deceased, in holiday garb and provided with musical instruments. Lengthy banquets take place, with dances, songs, games, dramatic performances, etc. The guests must, in fact, cheer the spirit of the dead man as much as possible and prevent his heirs from abandoning themselves to a grief both useless and dangerous. This accounts for the very joyous character of Laotian funerals. The placing on the pyre and the cremation are performed as in Cambodia (see CAMBODIA, 9 (5)). When it is the cremation of an important personage, the fire for lighting the pile, which used to be provided by the court of Bangkok in the form of a tinder-box, comes to-day from Hanoï from the French Governor-General of Indo-China, under the form of an electric spark.

9. Political and administrative organization.—Laos was once divided into independent principalities, the most important of which were the kingdom of Vien-chang (now demolished) and the kingdom of Luang-Prabang. France has preserved these divisions as provinces, each under the control of one of her envoys. Each principality, or *muong*, was administered by a *chao*, or king, under whom came an *upahat*, then a *latsabong* and a *latsabut*. The title of king has been preserved by the French Government only in the single case of the king of Luang-Prabang, but the *upahats*, *latsabong*, and *latsabuts* have been retained. These dignified offices are the privilege of a hereditary nobility, who make recruits by election under the control of the protecting Power. These functions generally pass from father to son. All the other offices may be filled by the common people. As in Cambodia, the Laotian functionaries 'drink the oath water' before entering on the exercise of their duties. When a mandarin sends a delegate to another province, he generally gives him a cane with an ivory or copper handle, which serves him as a passport. Judgment in serious affairs is administered in the capital of the *muong*, or provinces: the decisions may be revised by the *chao*. Laos is regulated by the codes and customs of Vien-chang as much as by those of Luang-Prabang. This code of laws is clear and well-arranged, and evidently related to the laws of Cambodia. It is among the most lenient of Asiatic codes. The death penalty is rare, extenuating circumstances being admitted; *e.g.*, theft of food or fruit in case of dire necessity is sometimes, according to the necessity, even pardoned. The French Power has made only slight modifications in the code in order to further the progress of Laos and foster peace in its borders.

ANTOINE CABATON.

LAPPS.—The religious conceptions of the Lapps come down to us from various periods. As in the religions of other Arctic hunting peoples, the primitive belief was a worship of the dead and the allied bear-worship.

1. Worship of the dead.—The Lapps worshipped their deceased relatives as guardian spirits. They believed that those spirits stood in the closest relation to their surviving kindred and protected them and their children from calamities, assisted them on their hunting and fishing expeditions, and watched over their reindeer in the forests. Moreover, if for any reason the dead were dissatisfied, they could injure their kinsmen—*e.g.*, by afflicting them with sickness. Alongside of the primitive worship of the dead there might also be found a more developed ancestor-worship, evident traces of which appear in sacrifices made by a certain family or clan in their special holy place. As a result of the different conditions under which the Lapps lived, the sacrificial places of the family or clan were situated on high mountains or on the shores or islands of lakes rich in fish. Such holy places (*passe*) were recognized by figures in stone or wood (*seide*). We know little about the shape of the wooden figures; but the stone figures, many examples of which have been preserved until the present day, are either natural rocks or strangely shaped blocks, often in the form of a bird. The sagas tell us that the figures had life, and originally were men turned into stone. In the Lapp districts of Pite and Lule, these figures are called by a special Swedish name, *storjunkare* ('grand younkers').

In the religion of the Lapps, even in its most primitive forms, an element of foreign influence can be traced. The belief of the Scandinavian Lapps, that the dead took up their quarters in the mountains, where they had the same occupations and lived under the same kind of conditions as in their previous life, recalls the conception of the Norsemen, that the dead continued their post-mortem life within the mountains; and the belief that the dead roamed about at Yule (*joulo-gadze* = 'Yule train') under the guidance of *Struotta-galles* ('the man of Yule') or *Joulo-herra* ('the

Lord of Yule') is Scandinavian. To the spirits roaming about at Yule the Lapps offered food in a boat-shaped birch-bark basket which was placed on a tree. The word *saivo* may also be foreign. In the language of the more southerly Lapps it means both a sacred mountain and a subterranean spirit living in it. In the latter sense they spoke also of *Saivo-olmai* ('the *saivo* man') and of *Saivo-neida* ('the *saivo* maid'). The later conception, that the dead dwelt together in one subterranean abode, *jabme-aibmo* ('the world of the dead') or *mubbe-aibmo* ('the other world'), under the authority of *Jabmi-akko* ('the old woman of the dead'), corresponds to the Scandinavian conception of Hel, in the sense both of the kingdom of the dead and of a being ruling there. During the Roman Catholic period *jabme-aibmo* was transformed into an intermediate state, from which the dead, according to their deeds, proceeded either to *radien-aibmo* ('the ruler's world'), which corresponded to heaven in the Christian sense, or to *Ruto-aibmo* ('the world of Ruto'), where the dreaded blue-robed Ruto reigned and plagued men and beasts with sickness. He was sometimes called *Fuodno* ('the Evil One'). As an offering to him it was usual to bury a horse, on which he could ride away, and by the side of the horse the wooden image of a man. Some scholars believe that in Ruto they can recognize Odin, the Scandinavian god of death, who was likewise clad in blue and mounted on a horse. In any case the horse, as a victim of sacrifice, proves that such an offering cannot be of Lapp origin. The *kekri* or *keyri* ('spectre,' 'ghost') of the Finns has passed over to the *kovrre* or *kevrre* of the Russian Lapps.

2. Bear-worship.—Of all the ceremonies of the Lapps perhaps the most interesting is bear-worship, which comes down from the early hunting stage. To the Lapps, as to many other nature-folk, the object of their hunting was in a certain degree sacred. Both in hunting and in fishing the men alone took part, and the booty had to be carried into the *kåta* (the everyday tent) by a private door (*possjo*) at the back of the tent. In general they had to see that the bones were kept and buried, in order that the slain animal might come to life again. Nothing was of more importance than the careful observance of this rule in the case of the largest of the forest animals, the bear. Women might not be present at the bear-feast; but they were permitted to eat bear flesh in the *kåta*, only with a splinter of wood, and through a brass ring which was held in front of the mouth. The men alone might consume the heart of the animal (*bise bierga*, 'the sacred flesh'). There were all kinds of magical hunting usages associated with the bear ceremonies. It was the custom, *e.g.*, when the hunters came back from the forest, for the wives to salute their husbands by spitting the juice of chewed alder-bark in their faces, and for a certain period after a successful hunt a man was not permitted to have intercourse with his wife. It is worth mention that a woman might not drive a reindeer that had drawn a bear home from the forest, nor might the bear be taken home on a path which any woman had trodden. Of the utmost importance, too, was the burial of the bear; all its bones were carefully collected and arranged in their natural position in the grave.

3. Tutelary spirits.—There is some doubt as to whether the tutelary spirits of the Lapps were originally Lappish. The forest-spirit among the Norse Lapps, to whom attention should first be directed, was *Leib-olmai* ('the alder-man'), who ruled over all wild animals; but he was especially the tutelary spirit of the bear. To him, among other things, offerings of bows and arrows were made. This being was known only in a very restricted region, and he appears occasionally depicted on the Lapp drum in the shape of a bear—from which one may conclude that his origin may be assigned to the bear-worship itself. The name also points to this conclusion; for the juice of the alder-bark played an important part in the bear-hunting ceremonies. *Gidne* reminds us of the Scandinavian forest-maiden, a charmingly beautiful creature, who could be recognized by her long tail. From the neighbouring lands spring also *Gufittar* (Scandinavian *Go(d)vetter*, 'good being') and *Ulda* (Huldra) of the western Lapps. We can compare *Virku-akka* (*virka* = 'trap') of the Finnish Lapps with *Virankannos* of the Finns, and the Russian Lapps' *Tavaj* with *Tapio* of the Finns. There is also mention of a female, *Tava-ajk* (*tava* = 'mother'). The Russian Lapps had a spirit, *Miehts-chozjin* ('the master of the wood'), who shrieked and misled people in the forest; he seems to have come over from the Russians. A similar woodland spirit was *Vare-jielle* ('the one who lives in the woods'). A female divinity among the eastern Lapps was *Luot-chozjik* ('the reindeer guardian'), who looked after the reindeer while they roamed the forests untended during the summer. She did not, however, protect them from men. *Pots-chozjin* ('the reindeer master') had the same task of caring for the reindeer.

The water-spirit of the southern Lapps was *Tshatse-olmai* ('the water man'), to whom offerings were made in order that he might not cause any damage when men were journeying by water, or that he might drive fish into the nets of the fishers. A corresponding spirit among the Russian Lapps was *Tshadze-jielle* ('the one who lives in the water'), the sight of whom predicted disaster. A female deity in the western Lapp district was *Tshatse-neida* ('the water nymph'), who corresponded to the Scandinavian *Sjöjungfru* ('Lady of the Sea'); and *Tshadze-ienne* ('the water mother') of the eastern district, who was usually seen sitting on a rock, combing her hair, and who enticed people to come to her, seems to be identical with the Russian *rusalka*. In the sea lived *Akkruva* or *Avfruvva* (Scandinavian *Haffru*, 'mermaid'), who up to the hips had the body of a fish and above that the body of a girl, and there were water-spirits who predicted misfortune, such as *Nekke* ('nixie') and *Ravgga* (Norwegian *draug*) or *Tshatse-ravgga* ('water-spirit'), the spirit of a drowned person. The water giant *Vessedursses* was borrowed from the Finns. The Lapps called the tutelary spirits connected with certain districts by a common designation, *haldde*, borrowed from the Finnish *haltia* ('ruling').

The home also had a *haldde*. The Russian Lapps gave this spirit the names *Kyöde-jielle* ('the one who lives in the *kåta*') and *Pört-chozjin* ('the master of the kiln'); the latter, who corresponded to the Russian *domovoy*, lived in the house by the hearth, and not, like the original Finno-Ugrian domestic deities, in the back part of the *kåta*; this part was also deemed sacred by the Lapps, and no woman set foot on it. They spoke of a deity living there, *Possjo-akka* ('the old woman of Possjo'). The Scandinavian Lapps had, in addition, some borrowed domestic deities, such as *Tonto* ('the site') and *Smiera-gatto* ('the butter cat,' corresponding to the Scandinavian *Bära*, which stole butter for its master).

4. Nature-gods.—In addition to the dead and the spirits derived from the deceased, the Lapps had powerful nature-gods whom they worshipped. On the drums of the southern type the sun (*Beive*) occupies a very prominent place. But sun-worship was not originally Lappish, as is very evident from the oblations made by the Lapps. Like the Scandinavians, they offered white animals to the sun

The symbol of the sun for sacrificial purposes was a ring. Scandinavian influence can also be traced in the mid-summer offering of the Lapps, viz. porridge set out in honour of the sun. A personification of the sun was *Beive-neida* ('the sun maiden'), and the moon (*Manno*), which in winter is an important light-giver in Lapland, seems also to have been worshipped. The Yule moon, *bissemanno* ('the holy moon'), was specially dangerous, possibly because the dead were then free to roam. When the new moon appeared, people had to avoid all noise; the women were not even allowed to spin in the *kâta*. A brass ring was placed in the chimney for the moon. Attention was also paid to *kuova-manno* (the joy month, February), a borrowing from a Scandinavian source. The Northern lights—*aurora borealis*—were regarded as living beings; and these lights were not to be irritated by noises. Among the Russian Lapps there is a tradition that the Northern lights are the evil spirits of dead men. The thunder was thought to be a living being, *Diermes* or *Tiermes*; but it is uncertain whether the Lapps made offerings to him before they came in contact with tillers of the soil. At a later period the thunder-god was represented exactly like Thor and was called by his name, *Toragalles* ('old man Thor') or *Torat-uros* ('champion Thor'). He was supposed to be an old man (*Aija*) who killed goblins with a hammer; and his sacrificial symbol was a hammer held in his hand. From foreign sources also was derived the thunder-god's wife, *Akko* ('the old woman'), or, as she is sometimes called, *Ravdna* (*Rauni* of the Finns), to whom the rowan-tree was sacred; indeed, in her name may be recognized the Icelandic *reynir*, 'rowan.'

By the side of the thunder-god on the Lapp drum may also be seen depicted another Scandinavian deity, viz. the god of fertility, whom the Lapps called *Väralden-olmai* ('the world man'). He is pictured with a mattock in his hand, which proves, better than anything else, his southern origin. When the Lapps made offerings to him, they fastened to his sacrificial symbol a reindeer stag's genitals, to induce him to increase the reindeer herd. In addition to animal sacrifices, they offered in his honour agricultural implements, mattocks, and spades. All these features of the cult point to the Scandinavian Freyr, who was also called *Veraldar-goð* ('the god of the world'). At the sacrificial altars of Väralden-olmai, a 'world's pillar,' blood-besprinkled, was set up, a pillar with which he was to support the world. This was another borrowing from the Scandinavians, and it is seen in their sacred high-seat pillars, and in the sacred pillar (*irminsul*) of the early Saxons.

There was a third important Scandinavian nature-god whom the Lapps worshipped, viz. *Biegga-galles* ('the old man of the wind'), or *Bjegg-olmai* ('the wind man'), who drove out the wind with a club, and scooped it in again with a shovel when it had stormed enough. To this deity, who was also known in Finnish Lappmark, they offered, among other things, small boats. In the north he had a name, *Ilmaris*, borrowed from the Finnish *Ilmarinen*, one of the heroes of the *Kalevala*. Like the Ilmarinen of the Finns, Bjegg-olmai showed features which were most certainly derived from the Scandinavian *Njorðr*. In like manner the Lapp method of conjuring forth wind and storm, by undoing three magic knots, is of Scandinavian origin. From their agricultural neighbours the southern Lapps may have acquired *Jisen-olmai* ('the hoar-frost man') and *Rana-neida* (significance of *Rana* unknown), the former being a frost spirit and the latter a goddess of verdure or growth, who ruled over the mountains that become green earliest in the spring. It is probable that *Raz-ajk* ('the grass mother') of the Russian Lapps is of later origin, for grass is comparatively unimportant in the keeping of reindeer.

5. Other deities and mediators.—The goddess of birth was *Mader-akka* ('the old woman of the earth'); and her three daughters were *Sar-akka* or *Sar-edne* (from *sarrat*, which, according to K. B. Viklund, means 'to cleave sinews asunder for threads'; cf. the spinning of the Norns), *Juks-akka* ('the old woman of the bow'), who was identical with *Stäuk-edne* ('the gun mother'); and *Uks-akka* ('the door woman'). Sar-akka was most favoured, for she gave needed aid at childbirth and calving. The task of Juks-akka was to protect the child from falling and hurting itself; and with her Uks-akka, who lived under the door and changed girl children into boys in the mother's womb, was often confounded. All three lived under the *kâta*. The goddesses of birth, who were unknown to the eastern Lapps and to whom they offered spinning-wheels and alien sacrificial animals, corresponded to the Scandinavian Norns, just as the Lapps' porridge feast, which had to be eaten by women in child-bed in honour of the goddess, corresponded to the Faroe *nornagreytur*. During the Roman Catholic period Sar-akka was confounded with the Virgin Mary, who was frequently called *Sergve-edne* (significance unknown). Two strange ceremonies dated from the same period, viz. Sar-akka baptism and Sar-akka eucharist, which were simply imitations of the Christian sacraments. Roman Catholic tenets can also be recognized in the trinity of the Lapps—*Radien-attshe* ('the ruler's father'), *Radien-akka* ('the ruler's wife'), and *Radien-bardne* ('the ruler's child'), who are all depicted on the Lapp drum of the later periods. It was the duty of *Ailekes-olmai* ('the holiday man') to see that the week-end days, Friday, Saturday, and Sunday, were properly observed; and *Fasto-olmai* ('the fast-man') had to see that the fasts were observed. *Ailekes-olmai* also furthered prayers presented to the god whom the Lapps called *Jubmel* or *Ibmel*—a name borrowed from the Finnish *Jumala*.

The mediators between mankind and the spiritual world were *noide*, *noite*, *noaide* (Finnish *noita*), shamans of the same kind as those of the Samoyeds and the northern Asiatic folk. Usually they were extremely nervous individuals whose characteristic troubles passed down from generation to generation. Yet the natural skill and dexterity had to be cultivated by means of an old shaman. The *noaide* could enter into touch with the spirit world when in an ecstatic state, a trance, during which his soul went to the kingdom of death in order to ask the advice of the dead about such things as the cause of the sickness of men or animals, the prospects of hunting, and so on. For the purpose of assisting him, the *noaide* had one or more tutelary spirits (*suoje*, originally 'shadow,' 'phantom'), which he could inherit, or buy, or obtain as a marriage portion. Often the spirit placed itself at the disposal of the *noaide*. This spirit company was called *noaide-gaddse* ('shaman retinue')—a name which is often given to certain animals who helped the shaman during his spirit journey. From the close connexion in which such animals stood to their masters, it is probable that it was the shaman's own soul that, severed from the body, could put on different shapes: as a reindeer (*saivo-sarva*) it hastened over the hills; as a bird (*saivo-lodde*) it flew through space; as a fish (*saivo-guölle*) it plunged through the subterranean waters; and as a snake (*saivo-guarms*) it undulated on the earth.

6. The Lapp drum.—As a means of producing an ecstatic trance *noaide* employed yelling, wild

dances, and unnatural food and drink, but above all an instrument of exaltation, the so-called Lapp drum (*geure* in the south, *kobdes* in the north). There were two distinct types of Lapp drums. The riddle-drum had a narrow or broad wooden frame bent in a circle, with a tanned reindeer skin stretched taut on it. The upper side of the drum was provided with a handle. The other type, the shell-drum, had a frame resembling an oblong shell, with a couple of holes in the bottom by which to grasp it. The latter was not nearly so large as the former. In order to get the drum to sound as loudly as possible, the shaman warmed its surface at the fire before he began to beat it with the drum-stick—a hammer-shaped implement elegantly carved from a horn. In order still further to increase the sound, the drum was often provided with various kinds of rattling objects; and in order to liven up the shaman's fantasy the Lapps painted figures and signs with blood or alder-bark juice on the drum-skin. In the later days these figures were multiplied and became a perfect microcosmos, representing the whole range of ideas of the Lapps. It is uncertain whether it was the increase of the figures or a new art of divination that had come from the south with a riddle that had the effect of changing the use of the Lapp drum so that it was employed more as a means of divination than of exaltation. A bunch of rings was kept hopping about on the drum-skin as the drum-stick rose and fell; and from the movement of the rings on and off the different signs the shaman predicted good or ill. If the bunch of rings stopped at any symbol of a deity, it might be concluded that the god desired a gift. The Lapp drum was quite common as an implement of divination, and it survived in secret in certain districts almost down to our own day.

7. Sacrifices and offerings.—Sacrifices were offered by the head of the family or by the shaman. In certain districts in the south of Lappmark the sacrificial priest wore a special dress: on his back a white linen robe, on the left arm a brass ring, and on the breast a badge resembling the riband of an order. When he sacrificed to the female divinities, he wore a white linen cap. He was often bedecked with flowers, while a garland was placed on the forehead of the victim. This sacrificial custom points to Southern lands. The images of the gods, which were set up on special pedestals or altars, undoubtedly indicated a Scandinavian influence. The Lapps anointed their gods with blood and grease; and the wood for the sacrifice, which was set up by the door, was called *luotte-muorra* ('sacrifice wood'). A fence, made of horns (*tjorvegardi*), was placed round the image. Besides reindeer, which were the proper sacrificial animals, the Lapps, on occasion, when they made sacrifices to gods belonging to alien religions, offered horses, cattle, sheep, poultry, etc., which they bought from the natives. In the custom of the Lapps that the bones of the victim should not be broken, except to be placed at the disposal of the god with pieces of all the more important limbs, we find an ancient idea which was common among the Finno-Ugrian peoples. A primitive Finnish sacrificial usage had also been adopted by the Lapps, viz. the custom of strewing green twigs under the *seide*, or image of the god—spruce in winter, and birch in summer. When the shaman lifted the stone, he perceived from its weight whether the god was favourable or not. This also was the way in which the Samoyed determined the disposition of his *hahe*. Finally, the caution with which women made their way past sacred places, and the absence of women from all sacrificial feasts, can be traced far back into the childhood of the human race.

LITERATURE.—The most important sources of our knowledge of the religion of the Lapps are the reports of the missionaries from the end of the 17th and beginning of the 18th centuries. These were published by K. B. Viklund, in *Svenska Landsmålen*, Stockholm, 1898–1910, xvii.; J. Qvigstad, in *Kildeskrifter til den Lappiske mythologi*, Trondhjem, 1903–10, i. and ii.; E. Reuterskiöld, in *Källskrifter till lapparnas mytologi*, Stockholm, 1910; and J. Fellman, in *Handlingar och uppsatser angående Finska Lappmarken och Lapparne*, i.–iii. (Helsingfors, 1910–12). Accounts of most of the MSS are found in J. Scheffer, *Lapponia*, Frankfort, 1673 (Eng. ed., Oxford, 1674), in the French ed. of which (Paris, 1678) there is an important supplement. The account of the Lapps in Finmark, K. Leem, *Beskrivelse over Finmarkens Lapper*, Copenhagen, 1767, has E. J. Jessen's *Afhandling om de Norske Finners og Lappers hedenske Religion* as a supplement. Valuable additional information on the customs and usages of the Scandinavian Lapps is to be found in P. Högström, *Beskrifning öfver de til Sveriges krona lydande Lappmarker*, Stockholm, 1747, and in P. Fjellström, *Kort berättelse om Lapparnas björna-fånge*, do. 1755. The religion of the Finnish Lapps is sketched in J. Fellman, *Anteckningar under min vistelse i Lappmarken*, ii. (Helsingfors, 1906). The Russian Lapps are described by A. Genetz, in *Wörterbuch der kola-lappischen Dialekte*, Helsingfors, 1891; N. Charuzin, in *Russkie lopari*, Moscow, 1890; and A. Jashtshenko, in *Njeskoljko slov o Russkoj Laplandii* (= *Etnograjitsheskoe Obozrjenie*, xii.), do. 1892. Exhaustive descriptions of the mythology of the Lapps are J. A. Friis, *Lappisk mythologi, eventyr og folkesagn*, Christiania, 1871; G. von Düben, *Lappland och Lapparne*, Stockholm, 1873; J. Krohn, *Suomen suvun pakanallinen jumalanpalvelus*, Helsingfors, 1894; and A. Helland, *Beskrivelse over Finmarkens Amt*, ii. (Christiania, 1906). Of researches may be specified J. Fritzners, 'Lappernes Hedenskab og trolddomskunst,' in *Norg. Hist. Tidskr.* iv. (Christiania, 1876); A. Olrik, 'Nordisk og Lappisk gudsdyrkelse,' 'Tordenguden og hans Dreng,' and 'Soldyrkelse i Norge,' in *Danske Studier*, Copenhagen, 1905–06; Kaarle Krohn, 'Lappische Beiträge zur germanischen Mythologie,' in *Finnisch-ugrische Forschungen*, vi. (Helsingfors, 1906); W. v. Unwerth, *Untersuchungen über Totenkult und Odinnverehrung bei Nordgermanen und Lappen*, Breslau, 1911; E. Reuterskiöld, *De Nordiska Lapparnas Religion*, Stockholm, 1912; and U. Holmberg, 'Die Wassergottheiten der finnisch-ugrischen Völker,' in *Mémoires de la Société finno-ougrienne*, xxxiv. [1913].

LATTER-DAY SAINTS.—See MORMONISM.

LAUD.—William Laud, Archbishop of Canterbury, and chief minister of Charles I., was born, according to his diary (*Works*, iii. [1853] 131), on the 7th of October 1573, in the town of Reading. His father was a clothier by trade, and in later days his Puritan opponents did not allow him to forget the fact that he had not 'the good fortune to be born a gentleman.' Indeed, his unexalted origin was made the foundation of many malicious and exaggerated libels, which sound strangely in our ears in these democratic times. Had Laud lived under happier auspices, the ability and persistent energy with which he fought his way step by step to high position would doubtless have won their due meed of praise. As it was, he experienced to the full the disadvantages which belong to the lot of the *novus homo*, and to this circumstance some of the harshnesses and defects of his character may be traced.

Laud went to school at Reading, where he won the appreciation of 'a very severe schoolmaster,' who predicted that one day he would be a great man. In 1589, at the age of sixteen, he entered St. John's College, Oxford, and the following year became a Scholar. In 1593 he was admitted Fellow of St. John's, and a year later he became a Bachelor of Arts; his M.A. degree followed in 1598. In his diary he records various 'great sicknesses' which befell him both in infancy and during his University career. Indeed, throughout his life he was seldom free from ill-health for any long period, and in his arduous public life we can see an instance of the triumph of an indomitable will over a weakly constitution.

At the time that Laud entered Oxford, and for many years afterwards, Calvinism reigned supreme within its walls. The tide of extreme Puritanism which had set in after the reign of Queen Mary was running deep and strong. If the Puritans were in a minority in the country, they were very

resolute in holding to their ideals, and for those ideals they desired not toleration but mastery. They wished to see Episcopacy supplanted by the Presbyterian system, and for that end they steadily worked within the Church itself. Their objections to ceremonies, surplices, and liturgy were only steps towards the hoped for institution of the Genevan form of discipline as the Anglican standard. For the time being, it is true, this particular hope was in abeyance, and it was mainly as a doctrinal system that Calvinism now showed its strength. The leaders of the movement were in the ranks of the clergy, and the Universities were its strongholds.

To this system Laud soon showed himself a strong and dangerous opponent. He belonged to the school of Richard Hooker and Bishop Lancelot Andrewes, and the pious aspirations of men like George Herbert and Nicholas Ferrar were very precious in his sight. His ideal for the Church of England was that which in modern times is called Anglican. He saw in the English Church a great mediating communion, neither Roman on the one side nor Genevan on the other, primitive, Scriptural, and Catholic, purged from superstition yet reverencing antiquity, loyal to the truth once delivered and yet large-hearted in its welcome to new knowledge and fresh thought. Whatever grievous mistakes he made in furtherance of this ideal, it was to it that he devoted his life; and, after everything is said against Laud that can be said, the truth remains that his conception has been justified in the subsequent history of the English Church. To him in a large degree is due the settling of the character of that Church's system.

In setting himself against the Calvinism of Oxford, however, Laud entered upon a long and one-sided conflict with authority. In an academical exercise delivered soon after his ordination he gave great offence to Abbot, Master of University College and Vice-Chancellor and afterwards Archbishop, by tracing the authority of the Church, through the Roman Catholic hierarchy, up to the Apostles and the Primitive Church, and an outcry was raised later in 1604 when, in his exercises for the B.D. degree, he maintained the necessity of Episcopacy and the doctrine of baptismal regeneration. Two years later Laud was attacked by the Vice-Chancellor, Henry Airy, for publishing 'popish opinions' in a sermon delivered in the pulpit of St. Mary's. A trial followed in the Vice-Chancellor's Court, from which Laud emerged scot-free. Amidst these and similar attacks Laud's coolness, courage, and ability served him in good stead. For a time he seemed to stand almost alone. In his own words, 'it was almost made a heresy for any one to be seen in his company, and a misprision of heresy to give him a civil salutation as he walked the streets' (Heylyn, *Cyprianus Anglicus*, p. 54). On one occasion he sat in St. Mary's and heard himself abused for almost an hour together, being pointed at as he sat (*ib.* p. 66). The preacher on this occasion was Abbot, brother of the Archbishop, and Divinity Professor, who certainly castigated in trenchant style the supposed papistical leanings of this unruly member of the University.

Yet Laud was not without friends who sympathized with him in his baptism of fire. Bishop Young of Rochester, who ordained him as deacon in 1600 and priest in 1601, praised his study of the Fathers, Councils, and the ecclesiastical historians, and declared that, if he lived, he would be 'an instrument of restoring the Church from the narrow and private principles of modern times' (Mozley, *Hist. and Theol. Essays*[2], i. 116). Rapid preferment fell to his lot. He became chaplain to the Earl of Devonshire in 1603, and in 1607 he was made Vicar of Stanford in Northamptonshire. The following year the advowson of N. Kilworth in Leicestershire was given to him, and he took his degree of D.D., and became chaplain to Bishop Neile of Rochester. His first sermon before King James was preached in 1609, and shortly afterwards he was appointed to the charge of West Tilbury in Essex. Cuxton in Kent next fell to his care in 1610, but a few months later he left it to take charge of Norton. The same year the Presidentship of St. John's College became vacant, and Laud became a candidate. Naturally the whole strength of the Puritan party was put forth to prevent his appointment, Abbot, the Archbishop-Elect, and Lord Chancellor Ellesmere being indefatigable in their efforts. Yet, although Laud was disabled by sickness, and unable personally to take part in the contest, he was elected. An appeal was made to the Crown, which James in person disposed of by declaring Laud President of St. John's.

As head of a College, Laud was in his proper element, and his rule seems to have been a happy and beneficent one. In dealing with those Fellows of the College who had worked against him he showed a proper spirit of conciliation. As a patron of literature and sound learning he was wholly admirable, and his love of order and discipline found congenial scope in dealing with academic life and affairs. When he became Chancellor of the University in 1630, his opportunities for usefulness in this direction were much widened, and he used them to the full. The reforms which he instituted resulted in a large increase of students and in greater efficiency of teaching, and their effect remained long after Laud was dead.

It may be convenient here to summarize in anticipation the valuable results of Laud's connexion with Oxford. The codification of the University Statutes was perhaps his most important work, and his code still remains as the basis of the Statute-book of the University. Among its provisions were the institution of public examinations for University degrees, the revival of the College system with its moral and religious discipline and the academical dress, and an improved method of electing proctors. Laud's benefactions to the University were many and important. He founded the Laudian Professorship of Arabic, increased the endowment of the Hebrew Chair, and similarly augmented the emoluments of the Public Orator. He befriended foreign scholars like Gerhard Vossius, and helped to promote native men of learning like Jeremy Taylor, Selden, Lindsell, and Bedell. In 1633 Laud procured a royal patent for the foundation of the University Press—an institution in which he took the greatest interest. His munificence towards the then recently founded Bodleian Library was also great. He presented to this institution over 1300 MSS in various languages, besides a collection of coins, and built an extra wing to accommodate his gifts. His claim that no Chancellor had ever loved the University as he is well borne out by the record of his services and his gifts, and, when it is remembered that his educational work was carried out in the intervals of his ecclesiastical and political labours as Archbishop and Prime Minister, it seems all the more remarkable. Mention should also be made of the fact that, as Chancellor of Dublin University, Laud provided a Charter and Code for Trinity College, one of the features of the latter being the provision that the fellowships, originally of seven years' duration, should be tenable for life. The Colleges of Eton and Winchester also came within the Archbishop's care as visitor, and we find him

providing statutes for the Cathedral School of Canterbury. To the town of Reading and to the grammar-school where his instruction began he was a generous benefactor, and to his own College of St. John's he gave a new quadrangle and valuable presents of books.

One turns with less satisfaction to the record of Laud's career in the larger field of politics and ecclesiastical statesmanship. The problems of a kingdom cannot be handled in the same way as those of a College or a University, and Laud had all the defects of a purely academic character. He was lacking in that instinctive sympathy which enables the true statesman to grasp the conditions, unfavourable as well as favourable, under which his work has to be done. He did not realize the enormous power which prejudice plays in public opinion, and his bent was to treat men as a schoolmaster treats children. He was often hasty and severe. Harassed by his own love for details, he often failed to distinguish between the important and the trivial. His prodigious activity outran his strength, and, as he grew older, his temper became more uncertain and his attitude more arbitrary. As a Church ruler he presented himself more in the light of an official than of a Father-in-God, and as a statesman he was more inclined to rely upon force than upon influence. In holding high secular office in the State, and in promoting Juxon in England and Spottiswoode in Scotland to similar preferment, he ran counter to the public feeling of the country since the Reformation; and in becoming an agent of the despotic Government of Charles I. he involved the Church in a struggle with the growing power in the nation, and to all intents and purposes made the Church a department of the State.

Yet, with all his faults and mistakes, Laud has been hardly dealt with in the past. The picture of the monster drawn by Macaulay and the perpetrators of the great Whig legend does not correspond with the ascertained facts. S. R. Gardiner in his *History of England* has shown how to treat the man and his times in an impartial manner. And no one can read Laud's *Devotions*, with their unfailing note of penitence and of personal piety, without realizing that their writer was a man who strove conscientiously according to his light to serve his Church and his country. His diary, too, with its record of anxiety and disappointment, and its curious revelation of the writer's belief in dreams and omens, throws a very human light upon his brilliant but hazardous public career.

Laud's progress at Court was slow but sure. He became King's Chaplain soon after his election to the Presidency of St. John's, and, as time went on, further ecclesiastical preferments fell to his lot. In 1614 he received the prebend of Bugden, in 1615 he became Archdeacon of Huntingdon, and the year after Dean of Gloucester. At Gloucester he soon showed what his views were as to the externals of Church worship. Among other things he removed the Communion table from the centre of the choir to its old position at the east end. The Bishop of the Diocese was greatly offended at the innovation, and is said never to have entered the Cathedral again. In 1616 Laud was in the King's train during his visit to Scotland, and gave offence to Scottish susceptibilities by wearing a surplice at a funeral. Three years later King James offered Laud the Bishopric of St. David's, stipulating that he might continue to hold the Presidentship of St. John's. To this condition, however, Laud would not consent, and he resigned the headship of the College on the day before his consecration as Bishop. In 1622 there took place, at the command of the King, the famous controversy with the Jesuit Percy or Fisher, who had influenced, among others, the Countess of Buckingham, mother of George Villiers, the King's favourite. In the earlier stages of the conference, Francis White, afterwards Bishop of Ely, was the English champion, but after two meetings Laud was called in. Although he had not 'the full time of four and twenty hours to bethink himself' (J. Dowden, *Paddock Lectures*, p. 115), his learning and acuteness stood him in good stead. Denying that there is Scriptural or primitive warrant for an infallible pope, he proceeded to deal with Roman errors. Yet he conceded that Rome with its errors is a true Church, but not *the* true Church. Against the exclusive claims of Rome he appealed to the authority of a general Council, and to the witness of Scripture. The English Church as reformed, he declared, is also a true Church, holding the Catholic doctrines of Baptism and the Eucharist. In the Eucharist Laud saw a threefold sacrifice: (1) the memorial of the sacrifice of Calvary, (2) the sacrifice of praise and thanksgiving, (3) the sacrifice of ourselves, our souls and bodies.

One result of this controversy was the beginning of a close friendship and intimacy between Laud and Buckingham. Whatever may be said as to the strangeness of such an alliance, its sincerity was unquestionable. Laud became the confessor of the Court favourite, and undoubtedly exercised a real religious influence over him. In matters political also he was Buckingham's devoted ally, helping him with his advice and influence in times of trouble, and working to maintain his influence at Court. In 1625 King James died, and a new era of influence opened up for Laud. Charles gave him a fullness of confidence which his father had withheld. A schedule of the clergy was prepared by him at Buckingham's request, and laid before the King. Each name was marked O or P, the orthodox being listed for promotion, while the Puritans were to be left out in the cold. We find him defending Richard Montague against the Parliament's wrath incurred by his pamphlet against Calvinism, assisting Buckingham in his defence, and preaching up the King's prerogative before Charles's second Parliament. In 1626 he became Bishop of Bath and Wells, and two years later, shortly before the assassination of Buckingham, he became Bishop of London. Buckingham's death opened the way still further to Laud's promotion, and he became the chief adviser of the king. In 1633 he was translated to the Archbishopric of Canterbury, and became, under Charles, all-powerful in Church and State. In his diary (*Works*, iii. 219) he relates that the month before he became Archbishop he was twice approached by an emissary of Rome with the offer of a Cardinal's hat. Whatever may be thought of the sincerity of this offer, it had no effect upon Laud, who was thoroughly convinced of the strength of the Anglican position.

The character of Laud's administration in Church and State has already been briefly described. In matters ecclesiastical he put the care of outward things in the forefront, both because he believed that worship is the best form of teaching, and because he desired that Rome should not point the finger at Anglican slovenliness. He enforced uniformity of practice, and yet was willing to allow large liberty of thought. As a statesman he has incurred the odium of the severities practised by the Star Chamber and the Court of High Commission. But it must at least be remembered that the humanitarian sentiments of the present day did not exist in Laud's time, and that the cruelties of the Commonwealth far exceeded anything that

can justly be laid to his charge. He was not revengeful, and often treated his fallen enemies with private kindness. He was kind to the poor, and strove in various ways for social betterment.

Laud's connexion with Scotland was a fateful one. He had accompanied King James in his visit to that country as Dean of Gloucester, and again in 1633, as Bishop of London, he was one of the companions of Charles I. in a visit that produced an unfavourable impression among the Scots. The climax came in 1637, when the attempt to introduce the Prayer Book known as 'Laud's Liturgy' led to ecclesiastical and political revolution in both countries. In spite of its name, however, the Prayer Book was in the main the work of two Scottish Bishops, Maxwell of Ross and Wedderburn of Dunblane, Laud's share being confined to preliminary suggestion and subsequent revision. Both Charles and Laud, indeed, had wished the English book then in use to be adopted in Scotland, but gave way in the face of the patriotic representations of the Scottish Bishops. The real offence of the book lay in the arbitrary method of its introduction, regarded as the culmination of a series of despotic acts.

Laud met his fall with pathetic dignity, and bore his long imprisonment with all its trials very patiently. On 18th December 1640 he was impeached by Parliament, and the following March he was imprisoned in the Tower. His friend and colleague Strafford was executed on 12th May, and the Archbishop fainted at the window of his cell when attempting to give him his blessing on the way to the scaffold. In May 1643 Prynne was commissioned to rifle his papers, and to seize his diary, a mutilated edition of which was shortly afterwards published. His trial for high treason began on 12th March 1644. Laud showed the same coolness and ability in defending himself that he had exhibited many years ago in the Court of the Vice-Chancellor of Oxford, and the prosecution failed. But his enemies were not to be baulked of their prey, and a special bill of attainder was passed by Parliament. On 10th January 1645 the Archbishop paid for his policy and his mistakes with his life. He was executed on Tower Hill in the presence of a large multitude, declaring that he had always belonged, in heart and soul, to the Church of England, and that he had never endeavoured the subversion either of law or of religion. His body was deposited in the chancel of the neighbouring Church of All Hallows, Barking, whence it was removed in 1663 to St. John's College, Oxford.

A. MITCHELL.

LAUGHTER.—When we seek to assign to laughter a place and a function in social life, it is clear that we have in view the laughter of embodied persons. Even when 'the joyful roar to the benefit of the lungs' has undergone repression and refinement under the touch of civilization, there remains a more chastened expression which may be seen if not heard, and without which a fellowship in feeling is incommunicable. There is, indeed, when refinement and repression have reached their limit, a hidden and silent laughter of the mind which might be enjoyed by a disembodied spirit—though even here for embodied mortals there are, no doubt, more subtle physiological effects which, by purely inward reverberation, give heightened tone to the enjoyment. But such silent and unexpressed laughter has, on one side at least, lost touch with social life. Apart from some form of telepathic influence, it can call forth no echo in others. It may bring to the individual an access of glee—a touch of 'sudden glory'; it remains, however, unshared; there can be none of that beneficent contagiousness which, through the interaction of suggestion, imitation, and sympathy, gives one form of social value to laughter—a real value, though in its more primitive stages it may as yet afford little evidence of that progress in the art of good manners which, according to Bergson, it is its function to promote.

On its physical and expressive side, then, laughter is, among other things, a means of intercommunication, though it may not be consciously employed to that end. Like other such means, it implies as a basis a common mode of expression, inherited or acquired; and, in large measure in co-operation with language, it affords to others an index of the presence of a specific and probably indefinable mode of affective tone which accompanies man's outlook on his fellows. For amid much divergence of opinion as to the essential characteristics of that which is provocative of laughter, there seems to be fairly general agreement that it is the situations of, or in close relation to, human life that afford the natural objective of laughter when it comes to maturity. On the one hand, therefore, there is the physical laugh which invites others to join in the social chorus; on the other hand, the laughable, which is a property of some sort that characterizes a social situation; and between them stands laughter, in the sense in which the word will here be used, as that which subtly yet distinctively qualifies some one's consciousness.

Of the laugh and the smile as bodily expressions little need be said. It is probable that for both there are hereditary foundations, and that the behaviour involved is, in the narrower and biological sense, instinctive. But whether the smile is, in the infant, an expression of satiety, and whether the laugh is at the outset the reflex outcome of physical tickling; how far they are quite independent modes of response, or how far they have common factors; whether they have in themselves some element of survival value, or whether the muscles concerned are, from the habits of our race, the readiest and therefore the first to receive an overflow of 'nervous energy'; how the facial, vocal, and respiratory co-ordinations are brought about, and why they should come to be an expression of specific and somewhat varying mental states—these are matters beyond our present concern. They are questions of genetic origin which we can afford to pass by. It is to laughter and the laughable that we must restrict our attention, merely noting that the nervous laugh, the irritable laugh, the laugh of bitter scorn, though the same organic mechanism of response is employed, do not seem to express the sunny laughter of the mind. The laughter of the Bible is nearly always an expression of scorn and not of mirth (see, however, Ps 126[2] and Job 8[21]). Genial laughter and the laughable are in correlative relationship; at all events the laughable inevitably implies some one who does or might laugh thereat. If we add that laughter also implies something which is laughed at (which will exclude the laugh as an expression of pure joy and lightness of heart), the symmetry of the correlation will be preserved. But a good deal depends upon whether the laugher is regarded as a relatively detached and disinterested spectator or is looked upon as eminently self-centred in his outlook. Schopenhauer's doctrine of the incongruous involves the assumption of the former attitude;

Hobbes's 'sudden glory' shows an emphasis on the latter.

Men experience the passion of sudden glory 'either by some sudden act of their own, that pleaseth them; or by the apprehension of some deformed thing in another, by comparison whereof they suddenly applaud themselves. And it is incident most to them, that are conscious of the fewest abilities in themselves; who are forced to keep themselves in their own favour, by observing the imperfections of other men' (*Leviathan*, pt. i. ch. vi.).

The stress in Hobbes is on the sudden conception of some eminency in ourselves by comparison with the inferiority of others or with our own formerly. So self-centred is this form of laughter that the correlative laughable almost fades out of view, though the inferiority of others is presumably in some degree ridiculous. As a factor in a particular type of laughter, this exultation over others and the accompanying self-exaltation may be accepted; as a comprehensive theory of laughter, it can hardly pass muster. Not all exultation over inferiors is of the order of laughter; not all laughter is of the order of self-exaltation.

In Schopenhauer's doctrine of the incongruous the self-centred attitude is relatively unimportant. His is predominantly a doctrine of the laughable, though this must, of course, be apprehended as such.

'The cause of laughter in every case is simply the sudden perception of the incongruity between a concept and the real objects which have been thought through it in some relation' (*The World as Will and Idea*, tr. Haldane and Kemp, i. 76).

There is an element of the unexpected or of expectation baulked. A situation, presented or described, diverges from the course of its customary development, or we are swiftly transferred into the midst of a somewhat different situation. But not all incongruity is laughable. The situations of social life teem with incongruities; and many of them are provocative of sighs and tears rather than laughter and smiles. Spencer, therefore, distinguished between ascending and descending incongruity.

'Laughter naturally results only when consciousness is unawares transferred from great things to small—only when there is what we call a *descending* incongruity' ('Physiology of Laughter,' *Essays*, i. 206).

In accordance with his physiological interpretation, the prior condition involves a volume of brain-excitement which, on the sudden descent, is too great for the occasion, and overflows, through habitual channels, into the smaller muscles of the smile or the larger muscles of the hearty laugh. But, unless, in line with the well-known thesis of W. James and C. Lange, the bodily laugh begets the laughter of the mind, the mental affection itself is not thus explained. The descending incongruity is translated into physiological terms; but we are left with that as determining the laughter and the laugh. No doubt it is applicable in many cases; but whether descent is in all cases necessary is, to say the least of it, doubtful. A man's hat on a child's head, and a child's hat on a man's head, may both make us laugh. Is this because in the one case we come down from the noble hat to the ridiculous child, and in the other from the dignity of the man to his absurd headgear? Or is there in each case a descent from the normal to the abnormal (cf. J. Sully, *Essay on Laughter*, p. 9 f.)?

Bergson reduces all forms of descending incongruity to one, and traces the genesis of laughter to the perception of some intrusion of a mechanical mode of action or gesture into a situation which should develop on the higher vital plane. For him there can be no descent more serious than that from life to mechanism. One would suppose that so fatal a fall would move Bergson to tears. But he suppresses these deeper emotions, and even insists that 'absence of feeling' is the usual accompaniment of laughter. One must look upon life as a disinterested spectator. To produce the whole of its effect, the comic demands something like a momentary anæsthesia of the heart. Its appeal is to intelligence pure and simple. Indifference is its natural environment, for laughter has no greater foe than emotion. Under these conditions the attitudes, gestures, and movements of the human body are laughable in exact proportion as that body reminds us of a mere machine. What is essentially laughable is that which is done automatically. Rigidity, automatism, absent-mindedness, and unsociability are all inextricably entwined; and all serve as ingredients to the making up of the comic in character. Such is his main thesis (H. Bergson, *Laughter*, Eng. tr., pp. 4, 5, 29, 139, 147). But, whereas for the most part serious discussions of the comic are dull enough, save for the welcome jokes and anecdotes which one enjoys all the more if one forgets all about the principles which they are supposed to illustrate, Bergson's book on *Laughter* is worthy to be placed on the same shelf as Meredith's *Essay on Comedy*. In both there is real distinction in matter and style. In both the sympathy of the artist is combined with philosophic insight. In both one is perhaps impressed by the inadequacy of any scientific formulation to hold in the bondage of clearly defined concepts the elusive spirit of laughter. One cannot but feel that Bergson's wide outlook on the laughable in life and in comedy overleaps the constraints of his theory.

He tells us that laughter is begotten of real life and akin to art. It is in the selective products of art that the thoughtful laughter of the mind reaches its fullest development. If, as he urges, there may be comic elements alike in situations, in words, and in character, the business of the artistic creator of the laughable is to combine all these elements into one synthesis which shall be provocative of laughter at its highest pitch of refinement. Witty dialogue, good in itself, must afford also a revelation of the comic in character, and must be organic to laughable situations presented. But how many and varied are the factors; how subtle is the harmonious synthesis! Here one sees portrayed the sudden glory of exultation, but it is not the sympathetic sharing of that alone that produces the thoughtful laugh. Or one may see cases of Kant's tense expectation evaporating in the void; but that does not cover the whole ground. There is, no doubt, much incongruity, not always descending; but episodic incongruity is subject to underlying congruity. We pass lightly from one universe of regard to another; but they are related, and each illuminates the other. This is seen in detail, and gives piquancy to the play upon words. If the after-dinner orator explains his success as due to his adoption of the principle that, if he does not strike oil in three minutes, he stops *boring*, two universes of discourse are related, and a sudden laughter-span bridges the interval between them. The incongruous implies some measure of separation, and there must be the subtle integration of some perceived congruity to produce the synthetic whole which the artistry of the comic seeks to attain. There is often, no doubt, some element of the mechanical, in a rather strained interpretation; but, notwithstanding Bergson's brilliant advocacy of a theory dictated by his philosophy, one feels that it is the free life of comedy rather than its occasional lapse into constrained mechanism that enshrines the true spirit of laughter. How many and varied are the constitutive factors of the laughable the sympathetic artist probably realizes better than the analytic man of science. And it is questionable whether the total exclusion of emotion (by which we must understand that which is in affective

antithesis to the laughing mood) is characteristic of the best comedy. If, as is generally held, humour is a blend of the playful and the serious, owing its timbre to overtones of something akin to pity, then, so far as humour is an ingredient of comedy, emotion is present. We have 'the richer laugh of heart and mind in one.' Meredith says that the humorist of high order has an embrace of contrasts beyond the reach of the comic poet. But this very contrast serves to enhance the richness of laughter, and characterizes the higher comedy as distinguished from farce; for 'the test of true comedy is that it shall awaken thoughtful laughter' (G. Meredith, *Essay on Comedy*, pp. 83, 85).

It is not the primary business of comedy to correct men's manners. That is one of the functions of laughter in social life; but it is introduced into comedy only as an ideal representation of that life. This disciplinary function of laughter is regarded by Bergson as the mark of its social utility (*op. cit.* pp. 17, 170, 197 f.). Laughter is above all a corrective. By laughter, which would fail in its object if it bore the stamp of sympathy or kindness, society avenges itself for the liberties taken with it. Its function is to intimidate by humiliating. Ridicule, we may say, is the whip with which society corrects the smaller faults of its children, and satire is the lash which is applied to corporate abuses when they have been stripped bare of their fine garments. In both there is something of self-centred superiority, even when it is felt to be the superiority of society embodied in the smiter. But, though the derisive smile or the scornful laugh may be there, it is not an expression of the true spirit of laughter, which is happy and genial. It is rather the lineal descendant of the exultant laugh of the savage over his vanquished foe. And it not infrequently fails in attaining its end, while the kindly good-humoured laugh has far greater efficacy in correcting the manners of boys and men.

It is questionable, however, whether this form of social utility is that which has given to laughter its chief evolutionary value in social life. This is rather a secondary utility like that of the insect's sting, which is derived from an organ of different ancestral value. There is a more genial form of utility. According to W. McDougall, laughter has been evolved in man as an antidote to sympathy with suffering (*Brit. Assoc.*, 1913, reported in *Nature*, xcii. [1914]). He contends that laughter arises only in situations which are mildly unpleasant except in so far as they are redeemed by laughter itself; or in presence of those things which would excite a feeble degree of sympathetic pain if we did not actually laugh at them. But are these conditions universal? Is the comic situation, or the joke, at which we laugh, always in some degree painful? Should we not substitute 'sometimes' for 'always'? There is, however, probably an element of truth (if not the whole truth) in the view that laughter is a protective reaction which shields us from the depressing influence of the shortcomings of our fellow-men—even when they jest. As pity softens the primitive callousness of laughter, so does laughter in turn relieve us from the depression which stupidity, for example, engenders. And it may have a wider influence.

'How many men in our highly civilized communities to-day may have learned to keep their heads above water by the practice of gentle laughter, no one knows' (Sully, *Essay on Laughter*, p. 408).

In any case, 'he who produces a laugh of pure gladness brightens the world for those who hear him' (Sully, *op. cit.* p. 417). Laughter is a tonic which braces both body and mind, and thus benefits both the individual and society.

LAW (Natural).—The idea of 'law' has a long and varied history. It has passed through important changes, and has occasioned manifold disputes. It took its rise as something relating to human society, and was then extended to external nature and the universe, whence, after undergoing a peculiar metamorphosis, it was brought back to the sphere of its origin, in order to shed light upon human life and action.

1. The development of the idea of natural law.—The development of the concept began in the ancient world, but it was not until the modern epoch that 'law' came to occupy a central position in all scientific procedure. The expression 'law of nature,'[1] which formed a theme of great interest in the classical age of Greece, was originally used with reference, not to the external world, but to human nature itself. It denoted the unwritten as contrasted with the written law. This unwritten law, however, was at first simply equivalent to traditional usage and custom, and it was only later that it came to be taken in the sense of a law written by the deity in the human heart. The term 'law of nature,' in its modern acceptation, is seldom

[1] The historical origin of the phrase 'law of nature' is discussed by E. Zeller 'Über Begriff und Begrundung der sittlichen Gesetze,' reprint from *ABAW*, 1883, and with signal caution and thoroughness by R. Hirzel, '"Ἄγραφος Νόμος,' in *ASG*, philol.-histor. Klasse, xx. [1900]. According to Hirzel, ἄγραφος νόμος primarily meant traditional usage and custom, and retained this sense throughout the ancient period; from the time of Thucydides, however, it came to bear another meaning as well, viz. that of the divine law written in the heart. Cf. also Hirzel's still more exhaustive work, *Themis, Dike und Verwandtes*, Leipzig, 1907, pp. 386–411.

used by Plato and Aristotle;[1] it was especially among the Stoics that it took a more prominent place, and here the idea of divine laws led to that of natural laws. The expression 'natural law' was first brought into general usage by the Romans, and from them again it passed to mediæval writers. As yet, however, the expression was used without real precision; it denoted merely a certain regularity of events, so that the Church Fathers, and in particular Augustine, could regard natural laws as no more than the customary modes of divine action—modes of action which might quite well be departed from in exceptional circumstances. Thus the belief in natural laws in no way conflicted with the belief in miracles. The conception first acquired a more precise signification in modern times, especially since the time of Descartes, and in close connexion with the whole character of modern investigation. The great object of modern scientific inquiry is to analyze an existent state of things into its simple elements, and to interpret the whole by means of the parts. The laws of nature thus came to be regarded as but the simplest forms of motion among the elements. The discovery of these laws seemed to give man the power of interpreting nature intellectually, and at the same time of controlling it by practical and technical application of the laws. This fitted in with the whole tendency of modern thought, *i.e.* to regard nature not as the work of a Higher Power, but as something to be interpreted by its own concatenations. It was felt, however, that, if the laws of nature were to have a precise content, a mathematical formulation of them was indispensable; and in this way an ancient problem found at last a happy solution. The Pythagoreans had taught that nature could be resolved into mathematical forms, and this theory had all along been maintained by a relatively small group of thinkers. But it was found impossible to formulate definite laws, and even as late as the 15th cent. Nicholas of Cusa had declared the task to be beyond human capacity. The first to construct mathematical laws of nature was Kepler, in his famous three laws of planetary motion, which thus marked a profound revolution in the investigation of nature. Thereafter Newton proposed the idea of reducing all the phenomena of nature to mathematical laws,[2] and Kant even ventured to say that 'in every special science of nature there can be only as much real knowledge as there is mathematics.'[3]

Side by side with this precise modern formulation of natural law, however, the ancient and more indefinite conception still survives; and even at the present day the discovery of a mere order in phenomena is often hailed as a law. This is especially the case in modern biology, in which, *e.g.*, a peculiarly intricate complex of facts, if it only recurs, is often summarily designated a law, so that what purports to be a solution is, in point of fact, simply a problem. In other ways also the term law has been the cause of much confusion. Laws are often discussed as if they were living forces, and even revered as if they were divine powers. It has frequently been forgotten that they are merely the forms of natural processes, and that they in no sense explain the processes themselves. A further source of ambiguity is that law is not seldom thought of as an entity lying beyond and controlling the concrete facts. Thus even within the sphere of nature itself the employment of the idea of law is attended with grave difficulties and dangers, and the dangers are greatly increased when the idea is applied outside that sphere, and used as a means of transferring the methods of natural science to other provinces of human interest.

2. The application of 'natural law' to other provinces.—This extension of the idea of law to extra-natural data began as early as the 17th cent., when, in particular, the idea was employed in psychology. The procedure was continued in the 18th cent., being now applied to the fields of politics and history, but it was in the course of the 19th cent. that the tendency reached its highest development, and the idea of law became the subject of numerous disputes regarding method.

(*a*) *Psychology.*—The application of natural law to the soul was carried out in a most imposing manner by Spinoza. For him the entire inward life of man was but a texture of single and particular occurrences, which work and interlink exactly like external things. Psychological laws in the stricter sense—*e.g.*, the laws of Association—were set forth in particular by English thinkers. In Germany, Leibniz had spoken of the ethico-logical laws of the soul, and Wolff made further advances on the same lines, while Herbart, again, sought to carry mathematical formulæ into the inmost life of the soul. Modern psychophysics has attempted with no small success to give a mathematical formulation to the relation between bodily and psychical processes, and especially between stimulus and sensation. Greater difficulties were encountered in the endeavour to interpret not merely the fundamental forms, but also the spiritual content, of psychical life on the analogy of natural laws. A special theme of controversy here was the relation between natural and moral law, some thinkers endeavouring to bring the two into the closest possible relation, while others insisted upon the unmistakable difference between ethical principles and the laws of nature.[1] The pre-eminent representative of the latter position was Kant, who regarded the moral law, with its imperative of duty, as something spontaneous, unique, and superior to all experience, and who uncompromisingly opposed the freedom which it involves to the necessity of nature. Schleiermacher, on the other hand, contended for a close connexion between natural law and moral law,[2] but in trying to universalize the scope of morality he incurred the danger of attenuating its distinctive character. The problem is not yet solved, and is still being ceaselessly discussed.[3]

(*b*) *Sociology.*—In a somewhat different sphere a fruitful theme of discussion was introduced by the attempt of modern sociology to reduce the social life of man to simple laws. The main factor in this movement was the known fact that by taking sufficiently large numbers of human beings the fortuitous element of the individual phenomenon may be eliminated, and relatively constant averages ascertained, and that thereby the phenomena of the social sphere are found to be much more regular than appears at first sight.[4] By thus surveying mankind in large numbers modern statistical science has discovered a mass of interesting

[1] The only passages, indeed, are Plato, *Timæus*, 83 E, and Arist. *de Cœlo*, 268 A, 10 ff. The word more frequently used for 'laws of nature' in the classical writers, as, *e.g.*, in medical works, in Democritus, Xenophon, Plato, and Aristotle, is *ἀνάγκαι*. Among the Greeks, the conception of a natural law was probably first definitely applied in the spheres of astronomy and medicine.

[2] Cf. the beginning of his *Philosophiæ naturalis principia mathematica*: 'Missis formis substantialibus et qualitatibus occultis phenomena naturae ad leges mathematicas revocare.'

[3] *Werke*, ed. G. Hartenstein, Leipzig, 1867–69, iv. 360.

[1] Of more recent works W. Windelband's essay on 'Normen und Naturgesetze' in his *Präludien*[4], Tübingen, 1911, is specially worthy of notice in this connexion.

[2] Cf. his *Werke zur Philosophie*, Berlin, 1834–64, ii. 397–417.

[3] *e.g.*, by H. Siebeck, 'Über das Verhältniss von Naturgesetz und Sittengesetz,' in *Philosophische Monatshefte*, xx. [1884] 321 ff.

[4] The pioneer in this field was the Belgian statistician L. A. J. Quetelet (1796–1874), especially in his *Sur l'Homme et le développement de ses facultés, ou Essai de physique sociale*, Paris, 1835, 2nd ed., Brussels, 1869.

facts. It is no doubt true that here certain uniformities have been rather prematurely resolved into laws, and that intricate congeries of facts have not always been sufficiently broken up into their simple elements; but, when all is said, the movement has opened fresh avenues of knowledge, and given effective incentives to inquiry.

(*c*) *Economics.*—The movement assumed a more intense and incisive phase upon the narrower field of economics proper. Here we find two modes of interpretation and investigation in conflict with each other. The advocates of the one mode sought to resolve the economic process into a mere tissue of self-regulating elementary movements, and so to explain them in accordance with natural laws, and they repudiated all interference in the political and social order as a derangement of natural processes.[1] The most prominent representative of this view is Adam Smith. It was maintained on the other side that, if the economic life of mankind was not to degenerate into a ruthless struggle of each against all, it must be ethically regulated. As representing this position the name of Thomas Carlyle will suffice. It is indisputable that in recent times this ethical view of economics has asserted itself more and more effectively in opposition to the purely scientific interpretation, and that, accordingly, the State has interfered more and more actively with economic conditions. Modern industry, with its huge manufactories, has been the main factor in this development.

(*d*) *History.*—There has been in recent times a considerable amount of discussion regarding the problem of historical laws. The abandonment of a religious reading of history has given rise to an endeavour to interpret the historical process by its own movement, and this again has led thinkers to construct a philosophy of history,[2] and to search for the laws that control the process. In the 19th cent. attempts to understand the movement of history as an ordered and articulate process were made—from opposite points of view, indeed, though not without a certain correspondence in results—by Hegel and Comte. Hegel regarded history as a self-evolution of the Spirit, which advances by means of antithesis, while Comte, by way of the 'three stages' in ceaseless progress, arrived finally at an intellectual interpretation of phenomena which provides a rational comprehension of human life as a whole.

In Germany, within recent years, a subject of much discussion and controversy has been the relation between history and natural science. Certain writers insist strongly upon the profound difference between the two, emphasizing the individual or particular character of historical processes, and seeing in these the pre-eminently valuable element of history. Windelband[3] and Rickert[4] are prominent champions of this view, and they are supported by the majority of German historians. A leading representative of the other school is Lamprecht, who puts forward the hypothesis of socio-psychical stages of development proceeding in a determinate order.[1]

3. Conclusion.—Thus the idea of 'law' provides an interesting example of the manner in which a general tendency works its way into all the various fields of human experience, and is used to mould them into conformity with the process of nature. But we also see here how the distinctive character of the several fields forms an obstacle to the tendency, and how this distinctive character is clearly revealed in the attempt to bring the various fields into correspondence with the laws of nature. It may be said, in general, that, if we are to speak of laws in the spiritual sphere at all, the conception of law must have quite a different meaning from that which it bears in the realm of nature. It is in particular the ideas of freedom and individuality that prohibit a simple extension of the laws of nature to other provinces.

Eucken, *Geistige Strömungen der Gegenwart*[4], Leipzig, 1909, Eng. tr. *Main Currents of Modern Thought*, London, 1912, p. 195 ff.; E. Boutroux, *De l'Idée de la loi naturelle dans la science et la philosophie*, Paris, 1895; W. Köhler, *Geist und Freiheit: allgemeine Kritik des Gesetzesbegriffes*, Tübingen, 1913.

R. EUCKEN.

LAW (Primitive).—The definition of law, like that of religion, is by no means so easy as it looks. That framed by the great jurist, John Austin, so long dominant in English political philosophy, was derived from Hobbes, who in the 17th cent. elaborated the theory of paternal government. So high did he place the authority of the ruler that he made the king the arbiter, not merely of political and social conduct, but even of religion and morals. Austin, of course, did not go so far as this. When he formulated his theory, the controversy concerning the Divine Right of Kings was dead, theological and political passion on the question had cooled down, and the British Constitution, as settled at the Revolution, had been accepted by all parties. It was, therefore, necessary only to posit a supreme political authority, without theorizing as to its origin or dogmatizing on its proper form. According to Austin, positive law (as distinguished from the divine law, the moral law, the laws of nature, and other laws so called by way of analogy, and in his sense not really laws at all) is a rule of conduct prescribed by a sovereign, whether an individual or a definite body of men, to a member or members of the independent political society wherein its author is supreme (*Lectures on Jurisprudence*[2], London, 1861, i. 316). Laws are a species of command addressed by a political superior to those on whom he has the power and the will to inflict evil if his desire expressed in the command be disregarded. A sanction, or penalty for disobedience, is, therefore, annexed to, or implied in, every command of the sovereign—that is to say, in this connexion, every law.

'Command, duty, and sanction are inseparably connected terms. . . . Each embraces the same ideas as the others, though each denotes those ideas in a peculiar order or series' (*ib.* pp. 5 f., 9).

This definition has the merit of avoiding all antiquarian questions and all theological dogma and philosophical speculation as to the origin of the supreme authority. It takes the facts as they are in modern civilized States, and as they were in imperial Rome, and frames a formula to express them. Nothing else was possible to that generation. Archæological inquiry into origins had hardly begun in 1832, when Austin's work was

[1] On the history of the question see I. Neumann, *Jahrbücher für Nationalökonomie und Statistik*, 3rd ser., Jena, 1899, who (p. 152 ff.) writes: 'Even in antiquity men sought for economic and social laws, and next, more especially from the latter half of the 17th century, from the days of Locke and Hobbes, they applied the term "law" to the facts of the former [*i.e.* economics], while the physiocrats themselves, in following these precedents, cannot be altogether exonerated from the charge of having been so influenced by the then all-powerful ideas of Natural Right that they were unable to keep such laws of events sufficiently distinct from those of the "ought," or ethical laws.' Cf. also his 'Naturgesetz und Wirtschaftsgesetz,' in *Zeitschrift für die gesamte Staatswissenschaft*, iii. [1892], and F. Eulenburg, 'Naturgesetze und soziale Gesetze,' in *Archiv für Sozialwissenschaft und Sozialpolitik*, xxxi.-xxxii. [1910–11].

[2] The expression 'philosophie de l'histoire' was first used by Voltaire, though not in a technical sense.

[1] The controversy as to the existence of laws in history is analyzed and explained by E. Bernheim, *Lehrbuch der historischen Methode und der Geschichtsphilosophie*[6], Leipzig, 1908; cf. also F. Eulenburg, 'Über Gesetzmässigkeiten in der Geschichte ("historische Gesetze")', in *Archiv für Sozialwissenschaft und Sozialpolitik*, xxxv. [1912], and art. HISTORIOGRAPHY

first published; or, if it had, it did not interest him; while the science of anthropology had not yet come to the birth. But during the last eighty or ninety years the extension and necessities of the Indian Empire, and the colonial, missionary, commercial, and scientific enterprises of every civilized nation have brought us into more and more intimate contact with peoples in every grade of culture and every variety of political, economic, and social constitution. To all thoughtful persons and to most civilized governments it has become obvious that the first requisite for good administration, as well as for missionary and commercial activity, is a right comprehension of the ideas and social order of nations thus brought under the sway, or at least the influence, of the white man. The scientific interest of the study has been quickened by these practical considerations, and has resulted in the accumulation of a vast amount of material unknown to our grandfathers. It has become clear that the social and political relations of a people, however wild or however backward in culture, cannot, and in fact do not, subsist without governing rules, and that such rules are equivalent to what on a higher plane is called law.

Moreover, the researches carried on simultaneously with these into the early history of the various European nations have emphasized the similarity of their original condition to that of many barbarous tribes in the present day. They have shown not only that the formation of codes of written law was gradual, but also that, side by side with them, a great body of unwritten but binding customs continued for ages, and possessed a validity and authority of its own. That authority antedated any formal prescription by a discoverable sovereign. It was recognized and enforced from time to time, but not created, by the sovereign's courts. In short, the customs were to all intents and purposes law equally with the written codes. Jurists have thus been compelled to reconsider the conception of law, and to take into account its historical origins. They could no longer content themselves with the *a priori* dogmatism that satisfied Hobbes and Austin. The problem how the conception of law may be so widened that its definition shall include the rules obeyed by all societies of men, whether savage or civilized, in their social and political intercourse became pressing in the latter part of the 19th century. Various solutions have been attempted, of which it will be necessary here to consider only two of the most recent.

P. Vinogradoff (*Common Sense in Law*, London, 1914, p. 33 ff.) argues that the notions of sovereignty and command are not necessary to the conception of law, that the term 'law' cannot be confined to a rule of conduct prescribed by the head of an independent political society, but extends to the rules to which the members of any society as such are required to conform, and, finally, that law does not rest ultimately on the physical sanction of force, but on recognition or agreement.

'Sooner or later we come to a point where law is obeyed not on account of material compulsion, but for other reasons—in consequence of reasonable acceptance or instinctive conformity, or habit, or absence of organized resistance. . . . It is not the material possibility of coercion so much as the mental habit of recognizing rules imposed by social authority that is decisive in regard to the existence of laws' (*ib.* p. 52).

Thus every part of Austin's definition is traversed; his elaborate argument for confining the term 'law' to the command of a political superior is set aside; and the sanction to which he attached so much importance is abandoned as a test of law, so far at least as it is an appeal to force.

Direct coercion 'is not absolutely necessary to constitute a legal rule.' It may be 'the most convenient means for enforcing law'; but it cannot be regarded as 'the essence of legal relations' (*ib.* p. 42).

A sanction of some kind must indeed be implied, but it need not be of a material kind, like death, imprisonment, or the forfeiture of goods. It need not be inflicted by any definite tribunal. It may be nothing more than the hostility of public opinion, or the contempt of all honourable men. Beyond this, law is often obeyed for reasons indicated above, quite apart from even such vague external sanctions.

Vinogradoff's own definition is 'a set of rules imposed and enforced by a society with regard to the attribution and exercise of power over persons and things' (*ib.* p. 59). The only point here calling for any further observation is the object and purpose of the rules. Put in another way, laws may be said to be aimed at the delimitation of wills. No society could hold together unless the wills of the individual members were limited and restrained; without this it would be a mere struggling mob; it would be chaos. It is by means of the limitation and direction of wills that it becomes an organized community. The rules effecting such limitation and direction are the laws of the society. But every limitation of one human will gives power to other human wills. It defines the scope within which they have free play, and the conditions which they must observe to give effect to the intentions either of the individual or of the society, alike as regards persons and things. Within that scope and subject to those conditions, it facilitates the exercise of power.

B. Malinowski in his recent work on *The Family among the Australian Aborigines* (London, 1913, pp. 10–15), applying the concept of law to a very archaic type of society, reverts to the test of sanction.

'All social organization,' he argues, 'implies a series of norms, which extend over the whole social life and regulate more or less strictly all the social relations.' These norms are of different kinds and enforced by different forms of social sanction. He enumerates three. The first kind owes its validity 'to the evil results which are intrinsically connected with their violation.' The norms included under the second head are observed 'because any departure from them would bring general contempt and ridicule upon the culprit: a form of chastisement to which the [Australian] natives are said to be extremely sensitive.' It is only to the third kind, 'sanctioned by a more direct collective action,' that he applies the term 'law,' because such norms 'enjoy an organized, more or less regulated and active social sanction,' involving violent or magical proceedings for the purpose of corporal coercion or punishment.

Let us examine this classification. The first kind of norm includes the Arunta prohibition against eating meat which has been killed or even seen by certain relatives: 'The food would disagree with him [who infringes the rule], and he would sicken and suffer severely' (Spencer-Gillen[a], p. 469).

Similar rules enforced by similar sanctions prevent boys after initiation from partaking of certain food before their wounds have healed, and women from eating meat during pregnancy (*ib.* 471). So among the Jajaurung, 'whenever a female child was promised in marriage to any man, from that very hour neither he nor the child's mother were permitted to look upon or hear each other speak, nor hear their names mentioned by others; for if they did, they would immediately grow prematurely old and die' (R. Brough Smyth, *Aborigines of Victoria*, London, 1878, ii. 156).

Such penalties are what we call supernatural. But they are not the only supernatural penalties known to the Australian natives.

If a man among the Arunta, during the early stages of his wife's pregnancy, attempts to throw a spear or boomerang at any animal, the spirit of the unborn child, which follows him about, 'will cause the weapon to take a crooked course, and the man will know that he has lost his skill in the chase and that the child is angry with him.' Persistence, despite this warning, will largely increase the sickness and sufferings of the prospective mother (Spencer-Gillen[a], p. 471). Custom requires that on a death certain female relatives of the deceased must utter frenzied and reiterated lamentations, and must inflict serious wounds on themselves or one another, as if in an agony of

grief. Omission of these rites results in harm from the spirit of the deceased (*ib.* p. 510). Young members of the tribes about the junction of the Thomson and Barcoo rivers in Queensland are prohibited even from breaking an emu's egg. The prohibition is enforced by the threat that 'the offended spirits will shortly raise a storm of thunder and lightning, in which the unlucky culprit will probably be struck down' (E. M. Curr, *The Australian Race*, Melbourne, 1886–87, ii. 377). Among the tribes on the north-eastern coast of Queensland an infringement of the marriage-rules, the omission to wear the mourning necklace for the prescribed period, or the eating of forbidden food is said to bring on the offender the anger of a supernatural being called Kohin, and sooner or later death in consequence (A. W. Howitt, *Native Tribes of S.E. Australia*, London, 1904, p. 498).

Thus supernatural penalties are not, even among the Blackfellows, simply evil results 'intrinsically connected with' the violation of the norm, if by that phrase be meant an automatic operation of the sanction. They are often attributed to the action of ghosts and other imaginary or superhuman beings. On higher planes of culture we are familiar with offences against the gods, and innumerable tales are told of the vengeance of an outraged divinity. In this class of trespass we have to do with violations of a social rule that are so alien from ordinary conduct that they entail religious horror, expressed in the fear of a special kind of punishment. It is this horror that makes a supernatural penalty a social sanction. When the misfortune looked upon as the penalty overtakes a man, it is regarded as evidence of the trespass. The horror then fastens upon the guilty person and segregates him from his fellows. On the other hand, the consciousness of guilt often operates with overwhelming effect on the mind: men have been known to die from sheer terror when they have recognized their offence, though committed unintentionally.

Maori chiefs were fenced about with a very strict tabu. Not merely their persons, but everything which had come into contact with them, everything that had once belonged to them, was sacred. If an inferior made use of any such object, the tabu would kill him. Tannui, a high chief, once lost his tinder-box. Several persons who were so unfortunate as to find it and light their pipes from it, without knowing that it belonged to him, actually died from fright when they learned who the owner was (R. Taylor, *Te Ika a Maui: New Zealand and its Inhabitants*[2], London, 1870, p. 164).

Thus the supernatural sanction becomes itself an agent to preserve the norm recognized by society, apart from any penalty directly inflicted by the organized action of the community. But, while this is so, and while the operation of the community is indirect, acting through the conscience of the guilty man, the punishment is none the less of social origin. It is, therefore, not easy to see how a norm thus guarded can be distinguished from a law. But society is by no means always satisfied with this indirect penalty. The religious horror entailed by the trespass takes an active form, treats the offender with general contempt and ridicule, or with loathing, and drives him away, or even puts him to death—perhaps with all his family—and destroys all his possessions.

A familiar example is that of Achan, who, for appropriating a small portion of the spoil of Jericho which had been banned by Jahweh, was with his sons and daughters stoned to death, while all his property was burned, together with the corpses (Jos $7^{25f.}$). When King Uzziah trenched upon the prerogative of the priesthood by presuming to burn incense in the Temple at Jerusalem, the supernatural sanction immediately took effect: he was smitten with leprosy. Now, leprosy involved exclusion from religious rites and segregation from society. Uzziah, therefore, was cut off from the house of the Lord, and from the exercise of his royal office; he was shut up in a separate dwelling for the rest of his life, and Jotham his son was made regent (2 Ch $26^{16ff.}$, Lv $13^{45f.}$). Orestes, after putting his mother to death, was seized with madness and pursued by her Erinyes. He fled not merely from them, but from the vengeance of the Argives. When he came to Troezen, no one would admit him to his house. He was kept in a state of tabu until he was purified and cleansed from the guilt of matricide (Pausanias, ii. 31).

These events represent the consequences that flowed in law and practice from offences primarily punishable by the supernatural powers. Such offences were visited with the whole weight of social indignation.

It is, in fact, impossible, if we have regard to the test of sanction only, to draw a strict line between the three categories into which Malinowski divides the social norms as known in Australia. One form of sanction frequently implies, or results in, another. It is not only in comparatively higher forms of civilization that the first class of norms (roughly corresponding to what in Roman law was called *fas*) is enforced by a sanction beyond the supernatural penalty. The painful manifestations already mentioned of mourning for a death among the Arunta are a norm prescribed by society, and society does not leave retribution for non-compliance entirely to the ghost; it inflicts on the offender the contempt and ridicule of his fellows. Obviously a similar penalty must also follow the infraction of other norms of the same class, though not expressly mentioned by our authorities. Indeed, so strongly do the aborigines feel on some of them (the marriage-rules, for instance) that no doubt can be entertained of punishment by violent measures, independent of the supernatural sanction.

Nor can these consequences be confined to cases where the religious horror is aroused by violation of the norm, as in the illustrations already given. To take a single example outside the Australian area—

Among the Dakotas of N. America certain relatives are forbidden to address one another by name. Offenders against this rule, both men and women, have been known to be punished by having their clothes cut off their backs and thrown away (J. G. Frazer, *Totemism and Exogamy*, London, 1910, iii. 112).

Clearly the destruction of the clothing was only part of the retribution; it must have involved also the contempt of the community.

Punishment, when directly inflicted by society, is the expression of society's reprobation; and its severity roughly corresponds to the intensity of the feeling aroused by the offence. The mildest form in which public opinion thus declares itself against the offender is ridicule and contempt. These are a very real sanction—most of all in relatively primitive societies, where numbers are small and the individual members are brought into close contact, for escape is difficult, if not impossible. When active measures are taken, it is because the feeling aroused by the trespass is more intense, amounting to indignation, abhorrence, or fear. But, where active measures are appropriate, they are not always taken by the community as a whole; they may be left to the group more directly aggrieved. When a man is slain, an offence is committed against the community at large; but over and above this his kin is the sufferer by the loss of a member, and by the injury to its prestige, so that it devolves on the kindred to obtain reparation by slaying in turn the criminal or some member of his clan. The avengers are supported in such a case by public opinion. They are in effect the instruments of society; and the knowledge that they are thus acting in accordance with the *mos majorum* and the tacit concurrence of the community strengthens their hands, and tends to be a powerful deterrent from wanton violation of the peace. When, however, death is imputed to witchcraft, active concurrence of the community in retaliation is apt to occur. Witchcraft—hostile magic—is forbidden by all relatively primitive societies. It is a secret treason from which no one feels safe, a subtle danger threatening all alike. It therefore arouses an agony of apprehension, fury, and abhorrence, and everybody joins in the hue and cry after the suspected criminal.

This is true even among a people so peaceful and little disposed to violence as the Eskimos. Nor do they limit public interference to cases of witchcraft; for, when a man has rendered himself generally obnoxious, either by witchcraft or in any other way, some one is deputed to put him to death

(D. Crantz, *Hist. of Greenland*, London, 1767, i. 194; F. Boas, *Bull. Amer. Mus. Nat. Hist.* xv. [New York, 1901–07] 117, 467). The weak point here, as a more recent writer on the Eskimos remarks, is that the death of the man, however intolerable he may have made himself, even to his kindred, may start a blood-feud between the kindred and those who have been the instruments of society in punishing him with death. The power of public opinion is, however, so strong that 'the mere knowledge of having displeased the community would be severe punishment in itself,' and, therefore, likely to restrain an ill-disposed person from carrying his evil or reckless propensities to an extremity (V. Stefánsson, *My Life with the Eskimo*, London, 1913, p. 365). On the other hand, so far from implacable are the Eskimos that a serious fault—even one that may imperil the entire community by the violation of a quasi-religious tabu—may often be redeemed by public confession.

But to fix attention on the sanction—and that a penal sanction—as the test of law in a community relatively primitive is to limit the definition of law to that which concerns what we call crimes. It is to ignore whole provinces of law. The religious side of life, so far as it is enforced by sanctions not involving the organized and regulated action of the community, is entirely omitted from consideration. No one who knows how profoundly what we in our contempt are apt to call 'superstition' dominates savage life can fail to appreciate the seriousness of the omission. So slowly and reluctantly, indeed, is religion separated from law that even to-day the ecclesiastical law is part of the law of the land in some highly civilized countries. In the oaths daily exacted in our courts we have a perpetual witness to the large share formerly taken by religion in the administration of the law. Oaths are an appeal to the divinity to attest the truth of the evidence. They are a relic of the ordeals once held conclusively to determine on which side justice lay. Such ordeals are still in use in the lower culture. Courts of law are there often held, as they were in classic times, in the temples of the gods and under the presidency of priests and medicine-men; nor had such practices ceased in Europe until the Middle Ages came to a close.

Equally, no account is taken of the class of rights enforcible by civil procedure, which has attained so remarkable a development among the black races of Africa. Among those rights the rights to property, directly or indirectly, occupy an important place. Private property is but feebly represented in the social institutions of the Australian natives; and the complaints that come before the tribal elders savour much more of the criminal than of what we should call the civil jurisdiction. Hence it may not have been necessary for Malinowski to take into account this class of rights. When, however, we come to inquire whether his definition can be applied to social conditions elsewhere, we cannot overlook them.

No less serious is the omission of constitutional law. Low as they are in the scale of civilization, the Australian savages are not quite ignorant of constitutional law. The population is composed of a number of tribes, each of which occupies exclusively a tract of country. The boundaries of this tract are recognized by the adjacent tribes. The members of the tribe are bound together by a common language and common institutions, differing more or less from those of their neighbours, and by a feeling of solidarity, if not a definite alliance. Each tribe is divided into local groups. There is no chief of a whole tribe; but each local group, speaking generally, has its headman, whose authority, in most cases, is real but vague, depending largely on his personal qualities. He is assisted by a council of the elders, which deals with the internal affairs of the group and its external relations, and whose decision is the supreme authority. The office of headman is sometimes hereditary, though even then it is frequently conditioned by ability. The local group is made up of families, each of them ruled by the husband and father, with large powers over his wife and children, and often his grandchildren. Local groups are independent of one another, but frequently unite for the purposes of war and of religious rites and festivals. The tribe is, moreover, with rare exceptions, divided into exogamous totemic clans, descendible sometimes only through females, in other cases only through males. In the latter case the clan tends to be coincident with the local group, for the wife usually goes to reside at the husband's camp. The Australian organization is thus rudimentary; it is none the less real on that account. That of the Andaman islanders is in most respects even more rudimentary, except that they recognize the authority, though very limited, of a chief of the tribe over the various local groups.

A type of constitution, very interesting because it clearly shows how the social and political relations of a people are dependent upon economic conditions, is that of the Yakuts. They inhabit the steppes of north-eastern Siberia. In former times they were almost entirely dependent on their herds of horses, which found pasturage on the steppe and supplied their owners with food and the material for clothing and shelter. The minimum drove on which a family of four persons could live consisted of ten head, that is to say, five mares, one stallion, one two-year-old, one one-year-old, and two suckling colts. This would hardly keep such a family from distress. A maximum, on the other hand, of from three hundred to five hundred head would allow a community of fifty persons to live in comparative ease. This community, whether large or small, would be composed of individuals who seem to have regarded one another as related, and may be referred to as the kindred, or *sib*. Between the members of the *sib* there was community of goods. Kindred seems formerly to have been traced exclusively in the female, but is now traced in the male, line. The number of persons comprised in the *sib* is thus dependent upon the number of a herd that can be pastured at any given station and the number of persons who can be found to manage and be maintained by it. Every *sib* belongs to some tribe, called *ulus*, and sub-tribe, or *nasleg*. The land of each tribe is apportioned, and from time to time re-apportioned, between the sub-tribes, and that of the sub-tribe is still more frequently re-apportioned between the *aga-ussa*, or kindreds. Every kindred chooses a deputy for this purpose, and every *nasleg* an officer to supervise the deputies. But these officials do not appear to have any other authority. The *sib* (and, so far as can be gathered, the *nasleg*) is governed by a mass-meeting or general assembly of the *sib* (or *nasleg*), at which the common affairs are settled by the oldest and most influential members, but subject to the general opinion. The *sib* was frequently subdivided, for the convenience of tending the herds, into smaller families. Of such a family the father was the head. It held together so long as his influence was paramount, or until the necessity to divide the herd arose. In the family the younger members were subjected to the elder, these to the head, and the women to the men. War, when it took place, generally arose, if the traditions are to be trusted, from the stealing of women or cattle. The feeling of solidarity between members of the *sib* was very strong. A blood-feud was the consequence of murder; but meetings with ceremonies for reconciliation were an institution. It hardly needs to be said that the spread of civilization, and the consequent introduction of new means of livelihood, new luxuries, and new ideas of property, have greatly modified the ancient customs, which in the more southerly and fertile districts are now to a great extent broken up, and even on the open steppes of the north are in decay (W. G. Sumner, *JAI* xxxi. [1901] 65 ff.).

On the whole, in a wide but poor and thinly peopled land the life of the Yakuts, occupied with the care of their herds and the occasional diversions of hunting and fishing, was externally one of peace. That of the Maoris of New Zealand, in utterly different conditions, was one of continual warfare. Every winter a raid was planned on some neighbouring tribe, and every summer it was executed with cannibalism and other circumstances of barbarity. For such a life a different organization was needed.

The people dwelt in strongly stockaded *pas*, or fortresses, and militarism developed a hereditary aristocracy. They were divided into tribes, occupying separate districts, at the head of each of which was a chief, who was by virtue of his descent enveloped in a sanctity called *tapu* (whence our word 'tabu'), which varied in intensity with his rank. The tribe was subdivided into *gentes*, each distinguished by its own patronymic and governed by its own chief; and the lowest unit was the family. The religion of the Maoris was practically the worship of ancestors. The prestige of the chiefs was largely that of their

ancestry. The *tapu* that encircled them was derived not merely from their own personal power, but from the divine forefathers of whom they were both children and priests. A curious consequence of the value thus attached to heredity was that the eldest son of a chief was deemed higher in rank than his father. On the birth of a son the prestige of the father, or at least some portion of it, was automatically transferred to the child. He was a step upwards in the ancestral ladder, with a longer array of forefathers. Within the family the paternal authority was nearly absolute. Slavery was common; and the head of the family could put his slaves to death with impunity. If he ventured, however, to go the length of taking the life of wives or children, he would in the former case be liable to a claim for compensation or to vengeance at the hands of the kindred of the murdered wife; in the latter case he would be called to account by the tribe. The power of a chief also was nominally absolute within his *gens* or tribe, as the case might be. Both domestic and foreign affairs, however, were debated by the principal chiefs in open assembly, at which the warriors, women, and even children were allowed to speak. The chiefs were thus made amenable to public opinion, though the final decision apparently rested with them. 'Public quarrels between chiefs are referred to the *rangátira nui*, or head of the tribe, and his fiat is generally conclusive. His authority is much respected; yet subordination is scarcely known, as, provided a chief is satisfied with his people, they may be insolent to any other party, independent of his authority; the people supporting their chief, who in turn winks at their exactions and ill conduct.' Such a state of things, it is obvious, would give abundant pretext for the wars to which the people were addicted. The head of the tribe was not necessarily the leader in war; the war-chief was elected (J. S. Polack, *Manners and Customs of the New Zealanders*, London, 1840, i. 60 ff., ii. 23 ff., 34 ff.; Taylor, *op. cit.* p. 350 ff.; E. Tregear, *JAI* xix. [1889] 112).

The Bantu and Negro populations of Africa are also all more or less warlike. Without going into details, which would be tedious as well as unnecessary in view of the different types of society already presented, it may be said that among them a still higher organization has been developed, culminating in kingdoms ruled by hereditary monarchs surrounded by hosts of officials, maintaining an elaborate ceremonial, having a standing army, and whose subjects are graded into classes, each with its own occupation, rights, and duties; the whole edifice resting, it may be, on the slavery of a conquered tribe.

Constitutional law, in truth, is the very framework of society. It is the foundation-norm. Without it there can be no regulated limitation of wills; society falls into anarchy; it ceases to exist. The possibility of this result is not within the contemplation of any community. Consequently constitutional law rarely or never has any definite penal sanction attached to its observance, even in the highest civilization. But this does not entitle us to deny it the name of law.

Again, international law must be recognized wherever there is contiguity or intercourse between two or more independent tribes or peoples. It certainly exists in Australia. Strict formality governs the relations between tribe and tribe. There is a way of accrediting messengers which renders their persons sacred; there are rules concerning meetings for barter, for the celebration of religious and other rites, for mutual conference and the settling of intertribal differences, for intertribal hospitality, and even for the prosecution of war. Such rules are also found on other planes of culture, though some of them may be disregarded where a warlike and arrogant people comes into contact with a feebler one, or where passions are greatly excited. On the whole, however, it is true to say that, while the conventions of international relations are very seldom provided with a formal sanction, they are habitually observed, and their breach is liable to be seriously resented.

For these reasons we cannot regard the test of sanction as satisfactory; we are driven back upon that of recognition. Where a rule is generally recognized, it may be said to be imposed and enforced by society, whether or not a definite external sanction be annexed to it. For public opinion and the individual conscience will co-operate to ensure its observance. We may then define law as *a set of rules imposed and enforced by a society, for the conduct of social and political relations.*

To a large extent morality and law cover the same ground. The law of every community is an index to its morals; and especially is it so with relatively primitive peoples. Among them the standard of the collective conscience is external; the idea of motive as affecting the value of an act has not yet been fully evolved. To such peoples, for instance, the unconscious violation of a tabu entails the same guilt as the most deliberate; it is equally heinous to slay a man by accident and with malice aforethought. The distinction drawn by our morality between the different classes of homicide, and adopted by our law, matters nothing to them; bloodshed even in self-defence demands atonement. Until the individual conscience has been cultivated by the reflexion of generations on the social norms and their adaptation to the changing environment, and until the emotions have been disciplined and directed with some conscious effort, if not to the general wellbeing, at all events to the maintenance of the existing customs and constitution of society, morality cannot emerge as distinct from law. The process commences early. It is indispensable to the growth of civilization. It is one of the most important dynamic forces contributory to that growth. But its operation is slow.

On the other side, law is concerned with procedure. Actively to enforce compliance with the rules governing a society, or to punish non-compliance, certain steps have to be taken, and certain forms observed; otherwise the enforcement is lawless violence or individual caprice; it has not the consent and the power of the collectivity behind it. These forms are frequently, in the early stages of culture, crude enough; but they are forms recognized as the proper means of obtaining reparation for wrong. The sentence of death passed by a band of Eskimos on an obnoxious person, though passed in his absence and without his knowledge, is the sentence of the community, given in a manner more or less formal. In Australia such a decision would be arrived at by consultations of the governing elders. In either case it would carry the weight of the community. When the duty of retaliation for the death or injury of a man is left to his kin, it is because this is the recognized means of restraining lawless aggression. Stigma and contempt would follow their neglect of vengeance; but for others to interfere would be to commit a new offence, to arouse a new blood-feud; it would be outside their duty; it would not be in pursuance of the law. The feuds resulting from this method of enforcing the norm against bloodshed within the community are, however, in time perceived to lead to new dangers. To obviate these more than one method is available. The rule of a life for a life is commuted for a pecuniary compensation, agreed on between the parties or assessed by a recognized tribunal. With the advance of culture this is often, as among the ancient inhabitants of the British Isles, both Celtic and Teutonic, elaborated into a regular scale of payments in accordance with the rank of the victim, and is applied to other injuries—to those against property as well as against the person. The beginnings of the practice of referring outrages for redress to a recognized tribunal appear very low down in culture.

Among the tribes of south-western Victoria 'persons accused of wrong-doing get one month's notice to appear before the assembled tribes'—probably the tribe of the complainant and that of the defendant—'and be tried, on pain of being outlawed and killed' (J. Dawson, *Australian Aborigines*, Melbourne, 1881, p. 76). 'In the Narrinyeri tribe offenders were brought before the *Tendi* (council of old men) for trial. For instance,

if a member of one clan had been in time of peace killed by one of another clan, the clansmen of the latter would send to the friends of the murderer, and invite them to bring him for trial before the united Tendis. If, after trial, he were found guilty of committing the crime, he would be punished according to his guilt' (Howitt, 341). It is a very wide-spread practice of the Negro and Bantu peoples, equally in cases of what we should call a civil dispute and of crime, to have recourse to a *palaver* —which is, in effect, an action at law. The accused is summoned before a properly constituted court, a trial takes place, witnesses are examined, advocates are heard, and sentence is given. Only then can punitive measures be taken against the offender or the person liable on the claim. In certain cases, such as an accusation of witchcraft, the matter is decided by means of an ordeal, under which the accused may die. Such is the confidence felt in the *palaver* that the blood-feud has receded more and more into the background. Indeed, in at least one tribe in the Congo basin, recent scientific explorers have been unable to discover a trace of it (E. Torday and T. A. Joyce, *Les Bushongo*, Brussels, 1910, p. 76).

With procedure morals have little directly to do. It is sufficient that its rules are part of the law, and as such must be observed. How far any modification of those rules has in relatively primitive communities arisen out of moral considerations is a question to determine which the data do not at present exist.

The question must be answered: Whence does a law derive that recognition which determines its validity as a rule imposed and enforced by society? Even in highly organized and civilized communities the answer given by Austin is incomplete and unsatisfactory. For, though the written law expressed by a specific act of legislation is a rule definitely formulated and prescribed by the sovereign power, we are still left without any account of the source of that large body of rules equally binding on the community and known as the 'unwritten law,' in England called the 'common law.' In many modern States the law is wholly contained in a code supplemented and amended by subsequent legislation. Where there is no code, legislation presupposes, and is ultimately founded on, the unwritten law. This unwritten law is found expressed in judicial decisions given upon the cases brought before the courts from time to time. This was a process well known in ancient Roman jurisprudence. Decisions merely profess to declare the pre-existing law, and apply it to the relations of the parties in litigation. They may, in effect, formulate and make binding a new rule. If so, this is done by adopting and applying some principle already held by the community to be morally binding. When the result is generally accepted, the decision becomes law; and, though not formally an act of legislation, it has the same consequences. Otherwise it is overruled by a subsequent decision, or by the sovereign power.

In a relatively primitive society there is not always an authority capable of formulating a legislative act. All laws are unwritten. They depend for their validity, like the decisions of English judges, on acceptance and recognition. To a large extent they come down from remote and unrecorded antiquity; and on that plane of culture the forces of conservatism, influential as they are with us, wield immensely greater power. The custom of the fathers acquires a religious sanction beyond and apart from its appropriateness to the circumstances and condition of the people. The feeling was accurately if not completely expressed by the Bœotian who told an inquisitive and supercilious foreigner that he knew only one thing, namely, that it was right to maintain the customs of one's ancestors, and that it was not right to apologize for them to foreigners. The answer was incomplete because it did not give adequate expression to the awe, the religious fear, the devotion—in short, the complex of emotions—that guard and preserve the institutions of savage society.

The cannibal Fang, we are informed, are not only 'not quick to adopt reforms or to introduce new methods; they are more or less the slaves of custom, and have a superstitious dread of departing from ancestral habits'—and this in 'all the proceedings of life' (*JAI* xxix. [1899] 80). The inhabitants of the island of Serang, one of the Moluccas, are reported to have an aversion to novelties, and to be very superstitious and much attached to their ancient usages. 'Custom is for them the law, and not to follow it is in their eyes not merely an outrage on it, but also an insult to the forefathers from whom the old customs have descended' (J. G. F. Riedel, *De sluik- en kroesharige rassen tusschen Selebes en Papua*, The Hague, 1886, p. 97). The same tale is told almost everywhere. To such lengths did a Bechuana chief carry his objection to change that, when one of his tribesmen had obtained some maize and planted it, although he allowed him to reap and eat of it, he would not allow him to plant it a second time, because it was a plant 'unknown to the fathers' (T. Arbousset and F. Daumas, *Exploratory Tour*, Cape Town, 1846, p. 172). Innovations are indeed often punished as a crime. Among the Arunta 'any infringement of custom, within certain limitations, is visited with sure and often severe punishment' (Spencer-Gillen[a], p. 11 f.); while among the Bangala on the Upper Congo adherence to custom is secured by the fear of being charged with witchcraft; in other words, that is the penalty imposed by society on him who departs from it (J. H. Weeks, *JAI* xxxix. [1909] 108).

The circumstances and condition of a people, however, are never quite steadfast; they are always changing, although slowly and insensibly, with everything else in the world. Appropriate customs arise gradually and unmarked, and are adapted from time to time to these slow changes with the same gradual and imperceptible progression. Hence to the members of such a society their customs frequently appear to be unchanged from the beginning, the unaltering bequest of the wisdom of the primeval ancestors, or a necessary part of the scheme of things without which they cannot conceive of the existence of society. Yet it is evident that both the original customs themselves and the changes that they undergo, however gradually and imperceptibly, must have been initiated by individuals. The collective opinion and the collective will are merely the concurrence of individual opinions and individual wills. Perception of this individual action is indicated in the traditions of many peoples; and, though the tradition of individual legislation may not in any specific case be trustworthy as history, it assuredly points to a consciousness of the fact of change and of change by individual initiation. Sometimes, no doubt, a Lycurgus might arise, and by force of his personality and genius impress his countrymen with his opinions and will to the extent of legislation. More usually a change, when recognized as such, is the result of long and repeated discussions among the leaders of the tribe. Spencer and Gillen give sound reasons for thinking that this is a course from time to time adopted by the aborigines of Central Australia (*op. cit.*, p. 12). If they are right, the conclusion cannot be limited to the tribes described by them. Such a change would not be ventured upon unless the elders were satisfied that the tribe was ripe for it. When announced, it would have to run the gauntlet of criticism by the whole tribe, and its validity would ultimately rest on general acceptance. In the lapse of time the superseded law might sink out of memory; the new law would then be regarded as of primeval authority.

At a somewhat later stage in civilization the lawgiver invokes the authority of the gods for his legislation. The Mosaic Law is ascribed to Jahweh; Ḥammurabi receives his famous code from Shamash; Minos is instructed by Zeus. In this way the general acceptance and permanence of the law would be secured by investing it with the sanctity of religion. The same intention is visible in the legislation of King Alfred the Great, who, in collecting and adapting the laws of his predecessors, placed at the head of the compilation the divinely inspired Decalogue and other Mosaic precepts. Acceptance is facilitated by the indistinction still characteristic of the institutions of such a society. We may analyze them under the

heads of law, religion, medicine, morals, and so forth; we may distinguish between different kinds of law; we may sever religion from medicine and medicine from magic; the members of the community itself do none of these things; no such analysis is possible to them. All their institutions are for them bound together into one equally authoritative and homogeneous whole. Each is part of all the rest, and cannot be severed from them. They see nothing extravagant in publishing a code in the name of a god, nothing incongruous in combining in the same code ritual, moral, agricultural, and medical with what we understand by strictly juridical prescriptions, prohibitions of homicide, rape, theft, and fraud with meticulous directions as to food—what must be avoided, what may be eaten, and how it must be prepared—the treatment of disease, the method of tillage, and the garb in mourning. The same code in the same divine name and with equal authority may make regulations for the conduct of commercial transactions and of the most intimate conjugal relations, as well as for a complex and splendid ceremonial of divine worship. All these are part of the national institutions, equally carrying the sense of obligation, and all actively fostering the sense of solidarity; therefore no impropriety can be felt in ascribing them to the same source.

The indistinction thus found has always been one of the chief hindrances to missionary enterprise. To break with one custom is to break with all; to renounce the religious ideas of the ancestors is to renounce the entire scheme of culture with which they are bound up. The same indistinction has retarded scientific inquiry into the jurisprudence of the lower culture. Observers have been apt to record practices, not law. Striking and superficial differences between savage culture and ours have riveted the attention, to the neglect of the principles underlying all social organization. Consequently the meaning of those differences has too frequently been missed, and their place in the development of civilization has been misunderstood.

Thus in a scientific periodical we are told by a writer who has lived and laboured among the tribe: 'The Fang have no system of law, no judge or tribunal for punishment of crime.' Yet he immediately goes on to say: 'Theft, murder, offences against the person are all settled according to native custom'; and he describes the procedure for the purpose (*JAI* xxix. 78).

A definite procedure for the purpose of settling claims that else will blossom into open warfare may not be literally a system of law; it is at all events a long step in the evolution of jurisprudence. But the observation quoted shows that what the writer has in mind is a highly civilized judicial system, such as he has been familiar with in his native land. He must be aware that the Fang, like all other tribes, have a body of customs having the force of law. They are the rules generally recognized and habitually observed, by means of which Fang society is held together. The particular procedure which he describes, if it discloses the want of a functionary armed with judicial authority, is not a picturesque but haphazard practice without sanction or recognition; it is a real juridical process. The author exhibits it by means of an example, thus:

'A Fang of the Esisis clan steals goods or a woman from a Fang of the Nge clan. The Nge who has been wronged does not go to the offender for settlement, he goes to another near town and shoots the first goat he sees in the street, or, if very angry, he may shoot a woman. The owner of the goat or woman demands of the Nge his reason for doing so. The Nge replies, "An Esisis" (giving the man's name) "has wronged me; I put the palaver (his offence) on you." The third party then goes to the Esisis and says, "An Nge" (giving the man's name) "has shot my goat (or woman) because you have made trouble with him; he has put your palaver (trouble) on me. You must pay me!" The original offender is now responsible and liable to two parties.'

These steps are thus the formal and regular preliminary to a palaver, and are as well understood over a considerable area of the continent of Africa as the king's writ or a police-court summons in Great Britain. So far from starting with an explosion of random rage, they are ingeniously calculated to enlist the active interference of a third party, and to render the wrong-doer liable in a double penalty—to the person injured by himself in respect of the original wrong, and to the third party in respect of the loss suffered by him at the hands of the latter. The palaver is publicly 'talked' by the representatives of the respective parties before the representatives of their respective clans. Though it does not appear that these have any direct power to impose a fine or order payment of the claims, such a discussion must in most cases tend to compose the differences, for it informs the public fully on the merits of the dispute. And the aggressor knows that, if he fails to 'cut' the palaver, by paying a reasonable compensation to the satisfaction of the aggrieved parties and their clans, he and his clan will have to run the certain risk of hostilities by two clans with public opinion behind them. The process, therefore, offers powerful incentives to peace, doubtless actively assisted by the representatives of the clans involved.

It is, of course, perfectly true that the laws of the Fang, and of all other relatively primitive societies, extend (as has been pointed out above) to many subjects that in the progress of civilization have dropped out of legislation. The use of the term 'law' in common parlance limits it to acts of the legislature and such other rules as are recognized by the courts of justice. It obscures for us the fact that many of the rules which we observe in daily life, though they are not amenable to the king's courts, are laws which have their own sanction, and breach of which will subject us to penalties tending to exclude us from the society of our fellows and make life burdensome in other ways. By virtue of the indistinction which we have already noted, savage mentality, though admitting a difference in the penalties, heaps all these rules together as customs. As such they are sacred. All alike they rest on a traditional basis; together they constitute the ethos of the society, which is not likely to be infringed. The variance of our point of view from that of the savage, the indifference or the comparative leniency with which we regard some acts or omissions that seem highly important to him, and the emphasis which we lay on other acts or omissions that he treats as trivial are a measure of the distance of our civilization from his, and should not blind us to the fact that what we call the customs of a tribe are as much a body of laws as the *Code Napoléon*.

LITERATURE.—The substance of the laws of peoples in the lower culture is mostly to be gathered from the general accounts of travellers, missionaries, and scientific explorers; and its collection and comparison is as laborious a process as any other branch of anthropological inquiry. In some instances, however, European rulers have for purposes of government found it necessary to collect and in some measure codify the laws of their subject-peoples, notably on the continent of Africa. Among such collections may be mentioned *A Compendium of Kafir Laws and Customs*, compiled by direction of J. Maclean, Cape Town, 1866; *Report and Proceedings with Appendices of the Government Commission on Native Laws and Customs*, published by the Government of the Cape of Good Hope, Cape Town, 1883 (a very valuable collection); *Les Coutumes indigènes de la Côte d'Ivoire*, by F. J. Clozel and R. Villamur, Paris, 1902 (a comprehensive juridical work giving the laws of the various tribes separately); *Fanti Customary Laws, a brief Introduction to the Principles of the Native Laws and Customs of the Fanti and Akan Sections of the Gold Coast, with a Selection of Cases thereon decided in the Law Courts*, by John Mensah Sarbah, London, 1897 (the author was a Negro barrister practising in the Courts; comparison of this with the last-mentioned work affords an admirable example of the difference between the French and English methods and views of jurisprudence). A collection of the laws of the Dinkas in the Egyptian Sūdan was made by Hugh O'Sullivan for practical purposes, when in charge of the Dinka divisions of the Upper Nile Province. It was published in *JRAI* xl. (1910) 171. Col-

lections of the laws of the Herero, a very interesting tribe in German S.W. Africa, have been published by Eduard Dannert (*Zum Rechte der Herero*, Berlin, 1906). As might be expected, these compilations, from their practical purpose, contain little beyond the native laws so far as they are administered by the Courts. Felix Meyer's *Wirtschaft und Recht der Herero* (Berlin, 1905) comprises somewhat more. A more general work, written in a scientific spirit, is *Afrikanische Jurisprudenz: Ethnologisch-juristische Beiträge zur Kenntniss der einheimischen Rechte Afrikas*, by A. H. Post, 2 vols., Oldenburg and Leipzig, 1887. The best compendium of the whole subject, with abundant bibliographical references, is the same author's *Grundriss der ethnolog. Jurisprudenz*, do. 1894–95, to which may be added S. R. Steinmetz, *Rechtsverhältnisse von eingeborenen Völkern in Afrika und Ozeanien*, Berlin, 1903.

In various periodicals devoted to jurisprudence, articles on the subject are occasionally found. Such articles are frequent in the *ZVRW*, Stuttgart, 1887 to date. One of the editors, Josef Kohler, devotes special attention to it.

Accessible works on the general subject are those of Henry J. Sumner Maine, esp. his *Lectures on the Early History of Institutions*, London, 1875. But it must be borne in mind in reading them that a generation of further research has resulted in conclusions widely differing from his on several important points.

E. SIDNEY HARTLAND.

LAW (American).—In so vast a culture-area as the two Americas, with their wide range of stages of civilization, from the savage tribes of S. California or the Amazonians to the highly organized Aztecs and Peruvians, the concept and the scope of law necessarily present extreme divergencies; and the difficulty of the task of preparing a *Corpus juris Americani*—a work urgently needed by all students of comparative ethnological jurisprudence—is enhanced by the scantiness of the records which have been preserved of extinct or obsolescent American Indian stocks, as well as by our almost utter ignorance of many living stocks, particularly in S. America, while scarcely any of the earlier observers studied from a juristic point of view the tribes with whom they came in contact.

Yet it would be wrong to conclude that the American Indian, even of the most undeveloped stock, is a lawless being. In a very real sense he may be essentially more law-abiding than those who are commonly regarded as highly civilized; for to him law is well-nigh synonymous with custom (*q.v.*); it is not something imposed from without, or supported by pleas of 'the greatest good of the greatest number,' or exercised by a class who may be regarded with antipathy by many members of the community, or a bondage ingeniously and sophistically to be eluded or circumvented by clever legal illegality, or a purely human convention to be flouted and broken by any lawless individual of sufficient strength to do so.

1. **North America.**—The general basis of N. American Indian government was the family—on a totemistic foundation—which formed a part of the gens, and this, in turn, of the tribe. Matriarchy was the rule, and the women possessed much influence in the election of the chiefs, of whom there might be more than one, so that separate chiefs presided over military and civil affairs among Iroquois, Muskhogeans, Chippewa, Dakota, and Pomo, and sometimes, as among the Caribs, there were chiefs only in time of war. The position and source of the chieftainship varied among the different stocks, and the general problem here is connected with that of the origin of the kingship (see the series of artt. on KING). Among many tribes, such as the Iroquois, Caddo, Omaha, Cheyenne, Arapaho, Comanche, the Plains Indians generally, Maidu, Yurok, Miwok, Kutchin, Tlingit, and Kaniagmiut, the chieftainship was elective, depending on the women or the shaman, often practically restricted to certain families, but conditioned in great part by wealth, and still more by personal ability. Elsewhere the office was hereditary, unless grave obstacles forbade, as among the Natchez, the Carolina tribes, Pawnee, Pomo, Gallinomero, Gualala, Nutka, and, under certain conditions, the Dakota; and among still other tribes both systems were in simultaneous use, as among the Abenaki, with whom the *sachem*, or supreme ruler of a number of tribes, held office by hereditary right, while the individual tribal heads, or *sagamores*, were elected.

The power of the American Indian chief is restricted, sometimes by more or less elaborate tribal councils, as among the Comanche, sometimes—and more effectually—by public opinion. Only rarely, as among the Natchez and the Santee, did he have power which might become tyrannical. Frequently he is little more than *primus inter pares*, this being especially the case in the less organized forms of government, such as the Maidu, Karok, and Californians generally. Much, however, depended on a chief's personal ability, notable instances of wielders of wide power being the Wampanoag Massassoit and the Powhatan Wahunsonacock.

The territorial scope of the chief's power also varies widely. In a few regions in N. America—most notably the Iroquois (*q.v.*)—real states and confederacies were established, but elsewhere—as on the west coast and among the Apache, Comanche, Shoshoni, and Eskimos—each chief was head only of a village. The Iroquois had developed the elements of international law, having a regular system of sending envoys, whose persons were sacred, to declare war or to make peace; and tribes less advanced politically possess the rudiments of similar institutions.

In very few instances the chieftainship is traced back to a divine origin, the most notable example being the Natchez chief, who was descended from the sun, although occasionally, as among the Nutka, the chief is at the same time a 'medicine-man,' or, as among the Calusa, he was believed to possess supernatural power, and was deposed or killed if he did not use this for the welfare of his people.

Among the Iroquois an insolvent debtor was tied to a tree and flogged, but among the Oregon tribes he became a slave. Death usually cancelled debt, as among the Eskimos. As regards contracts, the same general rules held as among ourselves, although the Tlingit and, with some reservations, the Eskimos expressly provided that either party might withdraw from a contract upon which he had agreed. For the American Indian laws regarding property see art. PROPERTY.

American Indian criminal law is concerned mainly with murder and theft. The penalties for murder have been considered in art. BLOOD-FEUD (Primitive). The normal punishment for witchcraft was death, which was also the penalty for incest among some of the Carolina tribes, for robbing a grave, as among the Chinook, for cowardice, as among the Kansa, and for desertion by an adopted prisoner of war, as among the Missouri tribes, this being regarded as treason to his new tribe. As regards theft, the thief was generally bound to make simple restitution; but the Huron required double restitution; and among some of the N. Carolina tribes, as also among the Tlingit, the thief, if unable to make the restitution required, became a quasi-slave. Among the Comanche, murder, adultery, theft, and failure to cure the sick were punished by death. As a rule, however, even the gravest crimes might be commuted by fines (cf. art. BLOOD-FEUD [Primitive]).

Legal procedure naturally varied according to the stage of civilization attained by each tribe. In the most primitive strata the punishment for non-capital offences was public contempt; in case of capital crime the persons injured—or their kin—themselves acted as executioners. Anything approximating a formal court was, however, ex-

tremely rare; the tribal councils normally took cognizance only of peace, war, and other matters affecting the tribe as a whole. Nevertheless, totem and tribal courts were found among the Huron, which acted especially on charges of murder, treason, and witchcraft. Any error in the form of procedure before these courts quashed the whole case. Certain Missouri tribes had courts of arbitration, whose decisions it was an obligation of honour to fulfil, while elsewhere considerable influence is exercised by the tribal councils, as among the Hopi and Iroquois.

2. Mexico and Central America.—The Aztec sovereign was regarded as the earthly representative of the gods, whence implicit obedience was due him, and his power was absolute. Like the Peruvian Inca, he was assisted by many officials, and there seems to have been a special department of justice, while in each large city there was a viceroy (*cihuacohuatl*) controlling both the general administration and justice, and constituting the final court of appeal in criminal cases. The rules as to the succession of the Mexican kingship differed in various times and places. In Tezcuco, Tlacopan, Michoacan, and Tlascala, as well as among the Miztec and Zapotec, the eldest son was normally the heir to the throne; but in Mexico it was usually the eldest brother or the eldest brother's eldest son who succeeded, though there seems to have been no rigid rule of succession, ability and character being more potent in the eyes of the electors than mere kinship to a deceased ruler. Over the Zapotec city of Yopaa a hereditary priest-king ruled.

In the smaller cities there were judges who decided minor cases, referring others to the higher courts, *e.g.*, to those consisting of three judges, who sat under the control of each *cihuacohuatl*. Both Mexico and Tezcuco seem to have been divided into six circuits, each represented at the capital by two judges, who formed the lower court for important cases, the court of last resort consisting of twelve or thirteen judges appointed by the sovereign, apparently for life, and required to assemble, under the presidency of the king or his representative, for ten or twelve days every four months (80 days). Any bribery, negligence, or partiality exposed them to reproof, and, if repeated, to degradation or even death; and the entire court system was worked in minute detail. Besides the regular courts, there were special courts for markets and for military affairs.

The Mexican laws, which recognized circumstantial evidence, seem to have been codified, and were administered strictly, though some leniency was shown to first offenders. The stern impartiality with which the judges acted was most admirable, and high rank or kinship to the king was of no avail to the criminal; indeed, Netzahualpilli put his own wife to death for immorality, and Netzahualcoyotl had his only legitimate son executed for high treason.

The best known portions of Mexican law are those relating to criminal procedure. Here the evidence of witnesses was requisite, although the oath of the defendant was accepted as evidence. Formal complaint was not always essential to begin prosecution, common reputation, as in cases of adultery, sometimes forming sufficient ground for legal proceedings. All grave crimes were punished by death, the mode of death varying according to circumstances, rank, etc. The death penalty was prescribed for murder (even of a slave), kidnapping, adultery, incest, rape, unnatural vice, pandering, witchcraft, altering landmarks, appropriation of another's property or of the royal insignia, selling land already sold, selling stolen goods, falsifying weights, slander, drunkenness or other excesses of priests and royal retainers, military insubordination, flight from the enemy, permitting an enemy to escape, selling or releasing a prisoner of war, treason (involving slavery or banishment for kinsmen to the fourth degree, and in Tlaxcala the death of kindred to the seventh degree), false accusation before the king, false guardianship, striking or insulting a parent, squandering patrimony, challenge to a duel, perjury, harbouring an enemy of the State, and, according to some authorities, abortion and wearing the garments of the opposite sex. A thief must not only make restitution, but also pay a fine to the treasury; under aggravating circumstances (as in the marketplace) or for repetition of the offence, he suffered death, but in Cuzco he was blinded. Slavery was often a punishment for crime—*e.g.*, for theft (apparently when the thief was unable to make the reparation demanded) and stealing another's child, as well as for delicts arising from negligence, if the delinquent was unable to make compensation otherwise, failure to lodge information of high treason, unauthorized sale of property, obtaining goods on false credit, embezzlement, failure to pay taxes, etc.; mutilation also occurred, as when the lips of a calumniator were pierced or partly cut off; and degrading punishments were inflicted in Anahuac for pandering. Drunkenness was an especial object of legislation, the drunkard's head being shaved, his house torn down, and all public office denied him; in some instances he even suffered the death penalty. Imprisonment as a punishment was rare, the usual use of the prison being restricted to those condemned to death or sacrifice. The *particeps criminis* in abortion was as severely punished as the principal, but received a milder penalty in cases of theft. Pardon might, however, be granted by the monarch, and certain festivals carried amnesty with them, while forgiveness by the injured party or his kinsman might mitigate a penalty.

All possible provision was made for the poor from the State treasury; and the laws of Tezcuco sought to protect the forests as well as agriculture, besides forbidding undue luxury—*e.g.*, gold and silver vessels for the wealthy nobles. There was also among the Aztec a law of contracts which must be made under oath; and gambling debts were valid so far as they came within the law of contracts. Another form of contract was farming on shares. Interest on loans was unknown, but commissions on sale and deposits in pledge were common.

The Mayan sovereignty was hereditary in the male line, and the power of the king was absolute, though he was constantly advised by his nobles; among the Quiche the king seems to have been succeeded by his brother, the heir-presumptive being the king's eldest son. Among the Lacandones and Nicaraguans the chieftainship was elective, and among the latter the chief was practically subject to the council; in Darien and among the Mosquito, on the other hand, hereditary chiefs ruled; while in Chichen (in Yucatan) a priest-king held power, in which connexion it should be noted that all the semi-mythical founders of Maya civilization, such as Votan, Zamná, and Kukulcan, were both priests and kings.

The system of courts was elaborate, and it is noteworthy that both here and among the Aztec advocates (though probably not with a special legal training) were appointed to aid both the judges and the parties to the case. Inspectors seem to have traversed the country to see that justice was properly administered, but there appears to have been no power of appeal after a decision had once been rendered. In cases of grave crime, torture is said to have been employed at Vera Paz to elicit

testimony. The Maya punishments were death, enslavement, and fine; imprisonment, except for detention, was rare, though inflicted at Coban for non-payment of taxes. The death penalty usually involved confiscation of property and enslavement of the criminal's family; it was inflicted for murder (although in Yucatan and Nicaragua, in a case of extreme provocation or other extenuating circumstances only a fine was inflicted, while, if a man killed another's slave, he was required to pay damages), incorrigible thieving, stealing large amounts (San Salvador—all theft in Darien) or from a temple, adultery (Darien, Yucatan, Itza, and Guatemala), rape (Guatemala), incest and seduction (Yucatan), sodomy (Nicaragua), treason, desertion, interference with payment of tribute to the king, kidnapping, killing the quetzal bird (Guatemala), disrespect for religion, lying in time of war (Pipile), sorcery, sexual relations with a foreigner (Carib), false testimony (Darien), and fornication between slaves (Vera Paz). Sometimes the choice between death and fine lay with the injured party, as for fornication and for poaching.

Enslavement was the penalty for murder by a minor (Yucatan), theft (if the thief was unable to make restitution and also pay a fine to the royal treasury) or attempted robbery, continued unchastity by a woman, unsuccessful rape, and obtaining goods on false credit (Guatemala), repeated adultery (Vera Paz), cohabitation with another's female slave (Pipile). Small thefts and improper advances to a woman were punished by banishment in San Salvador, as was bigamy in Nicaragua, but thieving was penalized by mutilation in Darien; a degrading punishment was flogging for falsehood (Pipile), theft by a noble (Yucatan), and adultery (Honduras and Nicaragua). All but the most heinous offences could, however, be commuted by fines. Strict fulfilment of contracts was required, and they were made valid by the parties drinking in the presence of witnesses.

3. South America.—The general level of civilization is far lower in S. America than in the northern continent; indeed, the conditions are, broadly speaking, very little superior to those of the Californian tribes. The usual centre of government in S. America is the village, each village having its own chief. Succession to the chieftainship seems generally to be by inheritance, as among the Bororo, Uaupe, western Tupi, Araucanians, and the tribes along the Xingu; but sometimes, as among the Caribs, Chiquito, Guahibo, Cren, Coroado, and Paraguayans, each chief is elected, though among some tribes, as the Tupinambaza, only from a special family. Only rarely does he claim divine power, as when a chief near Coro asserted that he was creator and lord of earth. Unlike N. America, which is matriarchal, both matriarchy and patriarchy are found in S. America; hence succession is sometimes matriarchal, as in British Guiana and among the Warrau, and sometimes patriarchal, as among the Uaupe, Araucanians, and the tribes along the upper Xingu, although among the latter, in default of a son, a sister's son becomes chief.

In time of peace the functions of the S. American chief are mainly conditioned by his personal ability, though in any event he is a counsellor rather than a ruler. He controls, in great measure, agricultural operations, organizes the expeditions for hunting and fishing, determines on places of settlement, and, at least sometimes, settles disputes that may arise. Among the Karaya he protects orphans and illegitimate children, and among the Macusi he convenes the village assemblies. One other function of importance he enjoys which is strikingly alien to his N. American fellow—his control of barter with neighbouring tribes and his duties as representative of his own village and as host to guests from other villages. Barter is much more important in S. than in N. America, and commercial relations between different stocks lead to a greater development of the rudiments of international law than is the case in the northern continent. So far is this carried that, among the Karaya, skill in conducting mercantile transactions is a more important qualification for chieftainship than ability in war, and even adopted prisoners of war may become chiefs if their business capacity is sufficient. In time of war the powers of the chief are greatly increased, as among the Caribs, Araucanians, Molucho, and Puelcho. If a chief is absent, he may be represented by a vice-chief, *e.g.* his sister; and if he dies, a kinsman, *e.g.* his widow's brother, may act until another chief assumes formal office. Among the Pampas tribes, on the contrary, the chief is authoritative only in time of peace.

Village councils deliberate on affairs of general importance; and sometimes, as among the Araucanians, sale of any part of the settlement is dependent on their approval, or, as among the Macusi, contesting parties submit to their decision, while among the Pampas tribes matters of religion come within their purview.

A further point of difference between S. and N. American government is the greater power of the 'medicine-man' (*paje*) in the former, particularly in matters that fringe upon the sphere of religion, *e.g.* in making war to revenge a murdered tribesman. However great the influence of the 'medicine-man' in N. America, he does not limit or circumscribe the power of the chief as he does in S. America.

The execution of justice usually depends upon the wronged individual or his friends or kin, although the functions of the Macusi council, just mentioned, form an exception to this general rule. Where a crime affects the whole community, as in cases of witchcraft, all seek to punish the offence. Death, often at the instance of the *paje*, is the penalty for sorcery and treason, as among the Araucanians, or for a woman who is unlawfully present at dances or in the men's house, as among the Chambira and some of the tribes along the upper Xingu, as well as among the Amazonians. Minor punishments are flogging or blinding, as for theft among the Brazilians. Among the Araucanians, torture may be used to extort a confession of guilt.

Occasionally legal responsibility is highly developed, as among the Goajiro, where one who lends an animal is responsible for any damage which it may do, and he who sells intoxicants for any mishap that may result. The Brazilians are acquainted with a system of deposits in pledge.

4. Peru and the Chibchas.—The culture of Peru stands quite isolated in S. America, where a high degree of civilization has been secured by no other people except the Chibchas (*q.v.*). The Peruvian government was essentially a socialistic despotism. Like the N. American Natchez, the Peruvians believed that their Inca was descended from the sun, whence he united within himself all civil and religious power, and was regarded as perfect. He was aided by a host of officials, themselves under strict inspectors, and everything was regulated to the minutest detail; in the giving of tribute, for instance, the natives of Pasto, being deemed stupid and dirty, were required to contribute at least some quota in the form of a levy of vermin. Poverty and idleness were as impossible as avarice; but, on the other hand, the socialism of the Inca's State stifled all initiative and all personal endeavour, placing everything on one dead, though relatively lofty, level. Land, for instance, was

apportioned by the State to the individual in proportion to the size of his family, and the allotment was changed annually according to the change of his circumstances—a usage which also appears elsewhere, as among the Brazilians and Huron. Labour was required of all—even children of five had their appointed tasks—and this labour was as meticulously regulated as were clothing, food, the care of strangers, the sick, the poor, and orphans and widows. The succession to the Incaship, as well as to the principal offices of State, was in general—though there were exceptions, and the authorities are not altogether in agreement—by inheritance in the male line.

Obedience to law was a marked characteristic of the Peruvians, particularly as law was of divine origin, and violation of it was believed to bring the wrath of the gods upon the land. The judges, who were supervised by inspectors and obliged to give an account of their administration, were bound by definite laws, and from their decisions there was no appeal, although the more important cases were tried before the higher officials, *e.g.* provincial governors. The severity of punishment was mitigated by alleviating circumstances, such as a first offence, provoked murder, or theft because of necessity; parents shared in punishment for offences committed by their children, and sometimes the superior was made a co-defendant with his inferior. On the other hand, men of rank were punished more severely than the ordinary citizen; *e.g.*, if one of the Inca's retinue committed the smallest theft, he suffered death.

The death penalty was freely inflicted, as for abortion, immorality, adultery, murder, ordinary theft, sorcery (the sorcerer's entire family being extirpated), fornication by a vestal of the sun (her lover and her whole kindred suffering with her), blasphemy of the sun, cursing the Inca, bridge-burning, etc.; lesser offences were punished with imprisonment; idlers were flogged; and even lying and slovenly housekeeping were visited with legal penalties.

The Chibcha ruler possessed despotic power. Succession passed first to the sister's son, or, in default of him, to the deceased ruler's brother. The laws were severe, and are remarkable for the number of fines which they levied, hereby enriching the royal treasury. Death was the penalty for murder, rape (if the culprit was married, his wife might be exposed to double the outrage which he had committed), incest, sodomy, and cowardice in war (in the latter event the coward might instead be forced to wear women's clothing). The thief was blinded; and other forms of mutilation are also mentioned as penalties. The nobles usually suffered degrading punishments, such as shearing off of the hair or flogging by their wives.

LITERATURE.—A complete survey of American law could be gained only by study of all the material thus far accessible on the peoples dwelling in the Americas. The chief summaries—by no means exhaustive—are the following: C. F. P. von Martius, *Von dem Rechtszustande unter den Ureinwohnern Brasiliens*, Munich, 1832; J. Kohler, *Recht der Azteken*, Stuttgart, 1892, 'Ueber das Recht der Goajiroindianer,' *ZVRW* vii. [1887] 381–384, 'Die Rechte der Urvölker Nordamerikas,' *ib.* xii. [1895] 354–416; M. Schmidt, 'Über das Recht der tropischen Naturvölker Südamerikas,' *ib.* xiii. [1899] 280–318; T. Waitz, *Anthropol. der Naturvölker*, iv. [Leipzig, 1864] 404–417 (for Peru); H. H. Bancroft, *NR*, San Francisco, 1882–83, ii. 133 ff., 433–472 (for Mexico), 630–660 (for Central America). Much material, with references, is scattered throughout A. H. Post, *Grundriss der ethnolog. Jurisprudenz*, Oldenburg and Leipzig, 1894–95.

LOUIS H. GRAY.

LAW (Babylonian).—Babylonian law naturally was based upon ancient custom. The origin of such custom, however, is often hidden from us in the mists of antiquity. We may legitimately argue back from historic conditions to the prehistoric implications, but the methods usually adopted are guesses in the dark. The invention of writing and the use of clay as the writing material have combined to preserve documentary evidence of the nature of the old consuetudinary law of Babylonia to a very remarkable degree. The disputes which arose among the ancient Babylonians were settled by a court consisting of judges and a group of assessors, the elders of the city. In the times of a settled monarchy the judges were recognized, if not appointed, by the king, and ultimate appeal was made to him. Their decisions, if not revoked on appeal, carried the weight of his authority as viceregent of the god—just as in earlier times human judges had declared the decision of the divine judge of men. Ultimately, therefore, judicial decision and royal enactment were a divine law; Babylonian law ran in the name of God.

The population of Babylonia was in all but the very earliest times a mixture of races. Racial customs must in early times have been diverse and conflicting. The earliest people whose monuments have reached us are known as Sumerians (see art. BABYLONIANS AND ASSYRIANS). They were early in contact with, and influenced by, Semitic folk. When invasion and conquest by successive waves of immigration had blended these races, they were subjected to further inroads by the Hittites, Kassites, Assyrians, Aramæans, Chaldæans, Persians, and even Greeks. For the most part, however, the life of the people had assumed a very stable form, and neither law nor custom suffered much change. This conservatism was largely due to the high degree of justice and the exact suitability to local conditions which the law had reached by the time of the Ist dynasty of Babylon, whose sixth monarch, the celebrated conqueror and lawgiver, Ḫammurabi, promulgated a code of laws known by his name as the Code of Ḫammurabi.[1]

Certain customs which had grown up under the oppressive rulers in Sumerian times were abrogated in favour of easier and fairer regulations by a series of enactments which are sometimes called the Code of Urukagina, after the monarch who claimed thereby to have relieved his people of the exactions of the royal tax-gatherers and priests. The rulers themselves and a host of their officials had ground down the people by fees and fines for legal matters such as divorce, marriage, or burial. To a considerable extent this was a legal reform; but, *e.g.*, while Urukagina abolished the fee demanded for divorce in former times, he has left us no statement of the conditions on which divorce was to be obtained in future. His reformation did away with abuses and restored the laws of God, but his record of it affords little information as to what those laws had been.

As it is probable that the Sumerians, over whom Urukagina ruled in the South of Babylonia, regained after his reforms their own native customs, uninfluenced by the Semitic peoples soon (about 20 years later) to rise to empire in the North under Sargon of Akkad, we must deplore the fact that we cannot treat the Code of Urukagina with adequate fullness as an authority for Sumerian law. When Sargon conquered the South, we may assume that great changes took place there, but we have evidence that the Sumerian law was adopted, in a great measure unchanged, by the Semitic invaders. Their very law-terms were taken over. Even when the bulk of the legal document was written in Semitic, Sumerian words and phrases were adopted unchanged, and 800 years later appear even in the Code of Ḫammurabi. The use of Sumerian as a language for legal documents in Southern cities such as Nippur survived the Ist dynasty of Babylon.

[1] This we shall usually quote as 'the Code.'

We must therefore bear in mind that Babylonian law has its roots in Sumerian soil; and, while Semitic customs were retained where race prejudices or religious needs demanded, the laws which regulated the settled civilization of the community were due to economic necessity rather than to racial characteristics. They had been elaborated by Sumerians, but Semites assimilated them as too valuable to alter or discard. The Code of Ḫammurabi embodies the judgments of a long series of judges acquainted with an already formulated system of law which had considered most of the points involved in their decisions. Perhaps the need for any further enactments arose from the conflict between ancient law as found in the land and a recent custom due to the modifications introduced by the new race. For the dynasty to which Ḫammurabi belonged rose to power as the result of a fresh immigration of a Semitic folk called 'Amorites.' The Semitic speech already in use in Babylonia was known as Akkadian, but that of the new-comers showed marked differences from it and affinities with the Western dialects. We may assume that customs marked by similar affinities came in with it.

Hence we cannot claim even racial purity for Babylonian law. It is the product of the interplay of many peoples. It would be a task outside our limits to attempt to unravel the threads which are easily discernible in its texture — even if the materials for judging of their composition were available.

Curiously enough, the Semitic scribes who adopted the Sumerian methods of writing compiled extensive lists of words and phrases, such as would occur in legal documents, and attached Semitic renderings. These lists have naturally proved of great assistance in reading the Sumerian portions of the many thousands of legal documents, such as conveyances, deeds of sale, leases, bonds, marriage settlements, receipts, and other memoranda, which have come down to us. They were obviously drawn up to assist young lawyers, who were to become notaries. By a happy accident one scribe has preserved what looks like an extract from a code and has been called the 'Sumerian Family Laws' (see *ERE* iv. 257, v. 447).

The great Code of Ḫammurabi was often copied even at the time when promulgated, and copies were made for the library of Ashurbanipal, king of Assyria (668–626 B.C.), which reproduce its decrees with marvellous fidelity 1200 years later. Copies, made in Babylonia, of even later times, exist. They were divided into books, or chapters, and read and commented upon almost to the end of Babylonian power. But copies of other later laws also exist, which show marked changes. The legal documents of the Chaldæan period of Nebuchadrezzar and his successors also show changes. We may, for want of a more precise term, call this Neo-Babylonian law.

With the details of a citizen's rights and obligations we are not well acquainted. Much is assumed in the Code as well known which we would gladly be told explicitly. The Code recognizes the *amêlu*, a free-born person of high birth and standing, the *mushkênu*, free, but of lower rank, and the *wardu*, slave. These three great classes were separately treated. A slave could be sold or pledged, and had no wage for his services. If injured by a third person, his injury was assessed and the offender fined, but the fine went to his master. The master seems to have had the power to punish him, but not to kill him, though he might brand him. The master clothed and fed him, and he had a right to three days' cessation from labour a month, at any rate in some cases. He might acquire property and even marry a free woman. He could buy his freedom and sometimes was freed by adoption. The slave girl often bore children to her master, but acquired rights thereby, so that she could not be sold outright, and even when insolent to her mistress could only be reduced to slave rank again, and was free in any case on her master's death. The slave went freely about the city and district, but was strictly guarded against flight. Any one who captured a runaway slave and restored him to his master was entitled to a fixed reward. To harbour a slave or connive at his flight was severely punished. To obliterate the slave-brand was treated as theft.

Some slaves, possibly captives in war, were owned subject to a fixed period of State service, extending to four or five yearly terms, either for war or for public works.

The status of a *mushkênu* was that of a plebeian. It may well have embraced the whole population, not of noble birth, who yet were free. The legal documents rarely refer to such members of the community except to name the quarter of the city where they dwelt. Injury done to them was punished more severely than injury done to a slave, but less severely than injury to an *amêlu*. But the *mushkênu* had less to pay for his crimes than a noble would, just as his offering was less in the temple. In all other respects he was free, and in many laws he is included among the *amêlu*, being named solely when treated as distinct.

The *amêlu* was properly a man of family, his genealogy being enrolled, his birth, marriage, and death being subjects of registration, and he was by strict interpretation an aristocrat—a title borne by the king himself. His status covered not only the rich proprietors, but also the military, priestly, and professional classes. Gilds of artificers existed, and had special quarters in which they usually dwelt. They were inter-connected by family relations, but admitted as apprentices both slaves and freemen. Nevertheless, they ranked as *amêlu*.

The king was in theory a benevolent despot, and the prosperity of his land depended to an extraordinary degree on his powers of hard work and organization. He took cognizance of all sorts of affairs throughout his kingdom — oppression, distress, neglect of officials, building, sheep-shearings, and movements of supplies, as well as military measures. Above all, he was the source of justice and the fount of honour. He had long ceased to be owner of all land, though conquest made him owner of much territory, especially the land of those killed in battle. He had his own estates as a private person as well as entailed endowments, as also had the great officers of State. But he had to buy like a private individual if he wished for more, or at any rate compensate at market price those whom he displaced. In most cities there was a palace which was usually occupied by his viceroy, or by a local magnate. Thus the *rabiânu*, or city mayor, had his palace. It was a hereditary office subject to royal approval.

Under the Ist dynasty a great many military or feudal retainers were settled in the land. To each was assigned a definite holding of field, house, and garden, together with some stock, for which he owed service. The service was 'the king's errand,' whether for war, garrison duty, postal duty, or command of troops or of gangs of work men on the *corvée*. The holding was inalienable, but refusal to go on the king's errand forfeited it and life together. It was carefully protected from oppression or the encroachments of higher officials, and was reserved for its holder if he returned from foreign service within three years. If he had a son able to manage it in his father's

absence, it was entrusted to him; if not, the duty was delegated to a *locum tenens*, one-third being reserved to the holder's family. Neglect on his own part to manage it forfeited the holding. If such a feudal tenant was taken captive abroad, he was ransomed at his own expense, but, in default of means to ransom himself, his city was bound to ransom him, and, if that failed, the State did so.

Such feudal tenants were captains, or at least sergeants, in the army and taskmasters on the *corvée*. All able-bodied men were liable to serve on both accounts, with the exception of temple servants, shepherds, stewards on estates, palace servants, and those whose service was essential at home. In the course of time military service was commuted for payment, or a group of families was called upon to provide and maintain a soldier, while the State found him arms. As early as the 8th cent. B.C. a definite area of land was required to furnish a bowman and his attendant pikeman, and was known as a 'bow' of land. These were grouped in tens and hundreds. Later, a horseman with his equipment was due from certain estates.

Closely allied with this military tenure was that of a *shukha*, whose office is not entirely clear. He was a 'catcher,' but whether of fish or men is not certain. If the former, fisheries were State property; if the latter, he was a sort of policeman. Subject to his service, whatever it was, he held lands on the same terms from the king. Other lands were held on condition of paying rent or tribute. The latter was due from holders of conquered lands. The king often rewarded his faithful subjects by grants of lands, and might further exempt such estates from State obligations.

Riparian owners had liabilities to furnish work to keep open or repair the canals, bridges, quays, etc. These public works were carried out at the expense of a king, a temple, or some public benefactor, but the beneficiaries were responsible for their upkeep.

The State claimed also fixed rates of all crops, stock, etc. Every city had its own octroi, customs, ferry dues, and highway and water rates, levied on all but its own citizens. Each city claimed some special rights; thus a burgher of Nippur could not be pressed for the army; Asshur was exempt from the *corvée*; and every citizen of Babylon had the right to trial even if caught at burglary. We happen to know of these facts accidentally, but probably most cities preserved laws distinct from the Code.

The king's messengers in peace, and a general or levy-master in time of war, could commandeer horses, fodder, cattle, grain, vehicles, etc., giving a receipt to the victim which ensured their return or compensation. Apparently the temple treasuries, which received a share of the spoil taken in war, were called upon to furnish means for war, the king borrowing of them and sometimes returning the loan. Later we find the palace acting as treasury and arsenal also.

The temple was a most important factor in Babylonian city life. The god, in theory, owned all the land, and every holder paid a tribute or rent to the city-god. The holders were, of course, members of the clan or association of people who had settled the city and built the temple. These and their descendants also had the right to furnish its priests, who inherited shares of the right to minister in the temple; and profit by its revenues became a valuable species of property, freely sold or leased, but entailed to certain lines of succession. The tribute to the temple from those who held its lands was early commuted to a tithe of all produce of the lands. But many holders had inherited the right to share this revenue. Private ownership of land may have arisen from the fact that a man inherited land on which he paid tithe ultimately to himself. Conquest and commercial arrangements gradually dissolved old obligations, and estates were freed by charter; but, while much land became private property, much was always entailed, or subject to redemption by next of kin. The temple also always retained much in its own possession, and acted as a large land-owner. It owned great herds of cattle and flocks of sheep and goats; it made up raw stuff, especially into garments; and it lent freely to those in necessity and on security, both with and without interest. Naturally the temple grew rich and employed large numbers of servants. The convents or cloisters of vowed women made the same progress, till the temples and allied institutions became much like the monasteries in mediæval towns.

Doubtless the concentration of power in the hands of the monarch and consequent centralization, coupled with incessant intercourse, gradually tended to break down local and city custom and make for uniformity. But there were other important factors.

A principle which had established itself through ages of commercial activity was that of contract. If parties could agree, they made a contract. Their deed of agreement was drawn up by a notary public, confirmed by an oath taken in the temple, and duly sealed by the parties in the presence of witnesses, who often affixed their own seals also. These witnesses were usually neighbours or collaterally interested parties. The manner in which such a contract was executed excluded as a rule any illegality or impiety. A clause was often appended, by which the parties bound themselves, in case of breach of contract, to abide by the decision of the king. The Code constituted such a decision in all the cases with which it dealt.

In case of a breach of contract, the injured party brought a suit before a court consisting of one or more judges, together with the elders of the city as assessors. A most important feature of procedure was the production of the contract and the witnesses to it. The contract was usually executed in duplicate, each party taking a copy, while the notary often held a further draft or third copy. To secure the deed from being tampered with, it was usually enclosed in a cover or envelope, also of clay. The envelope was inscribed with a copy of the document and fully sealed. While it would have been easy to falsify either deed or envelope, both being often of unburnt but sun-dried clay, it was impossible to reproduce both with their seals. The envelope might be tampered with, but the interior could not be. The judges in delivering judgment declared that they had seen and inspected the contract, and only rarely set it aside, and then only on grounds of mistake in fact. In some cases, suit was made to certify a fresh copy where the original had been lost, in which case the original was declared invalid, and ordered to be destroyed if found. After the contract was fulfilled, as when a loan was repaid, both copies were destroyed; and if, for any cause, one was not producible, an order was issued and recorded that whenever found it was to be destroyed.

The Code recognizes this practically universal habit of contract and the use of writing to embody agreements. It even insists on it, as when it declares that without marriage bonds a woman is no wife, or that no money or goods can be brought into account for which written receipt had not been given and was now produced. It was seldom that a contract was repudiated on the ground that it had been originally illegal.

On the other hand, the Code lays down that a man who is in debt shall not hand over his land and crops to his creditor unconditionally, even if the creditor is willing to speculate on the future yield, but must himself husband the crop and pay off his debt from the produce. This was intended to check the ruinous habit of borrowing on security of future crops, by which the debtor might pay dear for temporary accommodation or a lender lose his money through a failure in crop.

Consequently, it must not be assumed that the Code merely embodied contemporary custom or old-established precedents. It constituted a standard appeal. It did not prevent contracts (many of

which have come down to us), which were voluntarily entered upon, from being sustained by the court and carried out. It did set up a standard which subsequent practice gradually accepted. Even its criminal clauses were not at once enforced. In many cases they really define a maximum penalty or minimum wage, but the judges used their discretion as to its exaction.

The Code recognized the power of the oath, especially in cases where guilt turned on intention. A man who struck a fatal blow could purge himself of murderous intent by oath. In a deeply religious community fear of divine wrath constituted a strong security against the violation of an oath. The witnesses as well as the parties were put on oath. In many cases it was left to this 'fear of God' or 'conscience' to secure justice between men; but the written specification of the form which justice should take was a great step in advance.

In early times an oath 'by the king' alone is quite frequent. In all cases the oath by the local god is usual. When Babylon became the metropolis, Marduk, the city-god of Babylon, was usually associated with the local god and the king in oaths. The form of the oath is usually 'he, or they, singly or both together, swore by (lit. took the name of) such and such god or king.' Rarely is the purport of the oath given. It was 'not to repudiate the contract,' whether by default or by raising a plea on its terms. What form the divine vengeance on the faithless would take is not clear, but it is 'the god's evil.' When kings called down the curses of the gods on the malefactor who should contravene their orders, or deface their monuments, they were extraordinarily explicit and exhaustive as to the evil consequences to follow; but this was to deter from wrong any who should purpose its commission. The oath was a personal acceptance of obligation, not a fulmination against unknown wrong-doers. The agent who was robbed was put on oath as to his loss. The buyer of a slave abroad had to take oath as to his price.

Crimes and their punishments are dealt with in a separate article by T. G. Pinches (vol. iv. pp. 257–260), to which reference should be made. Very little evidence of crime beyond breach of contract can be expected from the deeds or bonds, but a number of legal decisions, laid down in special cases, have been preserved. For the most part, these do not state the nature of the suit, only the result and verdict of the court. The plaintiff seems always to have brought his complaint, 'captured' his defendant, and found judges, and each then conducted his own case. Written pleas and answers were put in, but advocates are not mentioned. We find orders given to defendants to appear and answer the charge. As the decisions are drawn, the plaintiff usually wins. But this is deceptive, for both parties were regarded as plaintiffs; each party brought the other into court. The decision as stated thus makes the winner appear to have been plaintiff. The parties could demand the venue to be changed so that the case should be tried in their own city. In any case we hear of many local courts. The unsuccessful suitor was often degraded to slave status, but, except that he had lied or borne false witness, no ground for this punishment is stated, and he paid damages also.

In the Code no punishment is assigned to murder. We may assume that this was left to the avenger of blood, but can only argue from silence. We are also left in doubt as to the agency for the execution of judgment. As, however, a man was to be scourged 'in the assembly,' we may assume a general responsibility on the part of the local assembly for execution. In two cases the Code specifies that the punishment shall be executed on the scene of the crime: a thief at a fire shall be thrown into it, and a burglar is to be gibbeted opposite the breach that he made in the house which he broke into.

The power of the king to over-ride the decision of the local court is implied by the Letters of Ḫammurabi summoning certain cases, including the judges and witnesses, as well as the parties, to his judgment-seat. But the Code mentions the royal pardon only in the one case of an adulterer when the injured husband has already condoned the offence by pardoning his wife.

Corporate responsibility is seen in the fine inflicted on a burgh or parish for murder or robbery within its confines, and as compensation to the sufferer or his family. This was imposed in cases where the malefactor was not produced.

Private property in land was the rule, but subject to the State dues and obligations. There were usually a number of consents and pre-emptions to be considered on a proposal to transfer ownership. Not all obligations went with the land; a sale might transfer the estate to another official's sphere and so be a detriment to the previous overlord. Hence a State official, the city, the county, or parish, so to speak, the levy-master or recruiting sergeant, all might have claims. Sometimes governors of a district enforced its transfer to a different land-group, or alienated land from a temple, or included it in their own subdivision. This was usually regarded as a wrong, and the king was appealed to for reversal of the transfer. A new owner was usually bound to take up the State obligation. Royal charters in granting an estate as reward for signal services to the State often gave exemption in perpetuity from State obligations.

A very interesting form of property was the right to income for the receipts at a certain door of the temple, or to exercise certain functions in the temple itself. The right was entailed, and so often came into possession of a woman or other person who could hold but not exercise it, or merely did not see fit to do so. The right was then pledged, or sold, to others, but reverted to legal heirs on the death of the beneficiary.

The Code recognizes many ways of disposal of property: sale, barter, gift, dedication, lease, loan, pledge, deposit, and testamentary disposition, all of which were primarily matters of contract. Sale was the delivery of the purchase in exchange for the price agreed upon. In the case of real estate, delivery was symbolized by handing over a staff, or the key of a house, or later the deed of conveyance. Estates were often exchanged, the difference in value, if any, being paid in money. Money payments might be made in silver, or its equivalent in corn or other natural produce. Credit was given for the remainder of a price not paid in full, but was treated as a loan from the seller to the purchaser, who gave a bond for it. The Code allows no claim unsubstantiated by a duly executed deed. The buyer had to convince himself of the seller's title. He might demand guarantees against State obligations or against a creditor who had lent money on the estate. The Code insists that he should himself discharge the State liabilities. Certain feudal holdings could not be sold or exchanged, and, if a purchaser claimed to have acquired such, he had to return the estate, and in addition forfeit the consideration which he had given for it. The next of kin might exercise his right of redemption, if it came under the head of *bît abiśu*, lit. 'his father's house,' *i.e.* if the seller had inherited the property. If a man bought or received on pledge or deposit from a slave or a minor without written power of attorney to dispose of the property, it was by the Code fraudulent

possession; he was accounted a thief, and was obliged not only to restore and forfeit the consideration given, but also to lose his life. Attempts to upset a sale were rarely successful, but their occurrence shows that a buyer needed to exercise caution.

In the case of goods, exchange of receipts was the rule. The buyer of a slave usually exacted a guarantee that he would not develop disease, especially the dreaded *bennu*—a disease not yet clearly identified, but having a long period of incubation, possibly of 100 days. The seller also stipulated for a fixed period of rest or abstinence from labour for his slave, three days a month in some cases. He might guarantee against the slave being recalcitrant, against desertion, obligation to State service, and other depreciations in value. These all came under the head of *sartu*, lit. 'blame' or 'fine,' and were matters of contract, and the buyer probably could not repudiate his purchase on their account unless guarded by contract. But the Code expressly annuls his purchase for him if the slave develops *bennu* within a month, and awards him return of the price paid. On the other hand, it makes the seller responsible for any claim made on the slave after sale. If slaves were bought abroad and, when delivered to the buyer in Babylonia, turned out to be the lost or fugitive property of a Babylonian, they were, if native Babylonians, to be set free. If they were foreigners, they were to be given over to their former owners for the same price as paid for them abroad, as to which the buyer's oath was to be accepted. Properly a native Babylonian could not be enslaved except as a punishment for crime. But slaves born in the house might be sold abroad, or freemen captured by the enemy might be enslaved by the enemy and bought in the foreign market to sell in Babylonia. They had to be set free and their sale was illegal.

In the case of all goods, the seller might have fraudulently appropriated them, and the buyer be at the mercy of the real owner, who might recognize and claim them. The claimant had, of course, to establish his previous ownership of his lost goods or be adjudged a would-be thief. If he did establish his right, the buyer would be adjudged a thief unless he could prove a *bona fide* purchase. He had to produce the seller and the witnesses to the sale. If these were not on the spot, he was allowed six months to produce them. If he could not prove purchase, he lost his life. If the fraudulent seller was produced, he suffered death, and the wronged purchaser could recover from his estate, if any. If the seller had died, the purchaser could recover five-fold. So far the Code itself. The seller, however, usually guarded against all claim to repudiate purchase by a clause in the sale contract that the buyer was satisfied and took his oath not to enter any claim against him. In return he guaranteed the buyer against defect in title.

In the great majority of cases an owner cultivated his own land, but the principle of hire was well understood and clearly worked out.

Lease of fields, gardens, or houses was made for a term of years, usually one or two, rarely longer. The date of entrance upon possession was often stated, and sometimes the date of expiry of lease. The rent was usually stated, and a portion, often a half or a third, paid at once in advance. The rent taken was often a share of the produce, a half or a third. In practice it is often specified as so much per acre. The case of share-rent raised difficulties which this avoided. If the landlord, *e.g.*, was to receive half and was paid in advance, a storm might ruin the tenant's share, but the Code ruled that he must stand the loss. If the storm came before payment was made, both shared equally in the loss.

In many cases, along with a field in full yield another area was leased to reclaim. This appears usually to have been part of the pasture land, or open field, which lay outside the ring of irrigated land or water meadows surrounding the city. Perhaps it was a recognized right that land so reclaimed to full cultivation became the private property of whoever reclaimed it. Some such convention must have obviated the gradual restriction of grazing land. Sometimes it appears that the land had simply gone out of cultivation. In all these cases the area to be reclaimed was allotted free of rent, on condition that at expiry of the term it should, usually in the third year, pay an average rent. Meanwhile the already cultivated land went with it at average rent, so ensuring the maintenance of both landlord and tenant, the latter making what he could out of the reclaimed land.

In a slightly different case, a plot of land might be let to make into a garden, orchard, or palm plantation, the tenant paying no rent for a period fixed according to the nature of the crop and the time it needed to become productive. The Code set an average term of four years, and in the fifth year tenant and owner divided the crop. After that it was the owner's. If he let it, he let it as a garden. If the gardener left any part unplanted, it went into his share. The division was one of area, not of produce. The owner took first choice. Another system has been called *métayer*. It was specially common with temple lands. Here the landlord found seed, oxen to plough and to harvest, agricultural implements, and in some cases even labour. The tenant was a sort of bailiff or steward. The Code lays down regulations of a more stringent character than those usual in the few contracts concerned with this system. For theft of the seed, of fodder supplied for the oxen, or rations for the labourers, the tenant had his fingers cut off. For stealing the implements or overworking the oxen he was fined, a still heavier penalty being levied for sub-letting the oxen or for entire neglect to cultivate. As he was likely to be poor, it was laid down that, if unable to pay his fines, he should be torn limb from limb by the oxen on the field.

The Code allows sub-letting as long as the landlord suffers no damage. But the contract, whatever its terms, must be kept. From accident or circumstances over which he had no control the cultivator might get no crop. A flood might carry away the produce, or a drought impoverish the crop or utterly destroy it. The Code rules that in such cases the tenant may carry over and pay the year following. The phrase is peculiar: 'to wet his tablet' may refer to an obvious custom of damping the sun-dried clay of the contract and so altering its terms. One thinks at once of the Unjust Steward in Lk 16. His lord's debtors 'moistened their tablets' and altered not the date, but the amount, of their debts. If a gardener failed to make a garden, he had a double debt to pay. He had kept the owner out of five years' produce of the land and disappointed his hope of a garden. He had therefore to pay five years' average corn-land yield and make the garden after all. The tenant of land was bound to cultivate it, not only because it might become foul and so not readily let to a new tenant, but because the rent was usually a share. If the tenant were neglectful, he could not get off with the stipulated share of the actual produce; but the Code fixed the rent at half an average crop for the locality. He had, further, to complete all the operations on the land as he would have done after a good crop if himself continuing the tenancy. He had to plough it, break it up with hoes and picks, gather out and burn the weeds, and generally leave it in good order. The fields do not appear to have been manured, and the rich alluvial soil might not have needed it; but gardens, orchards, and palm-groves were dunged with oxen manure.

Houses were usually let by contract, which stated the size and situation of the house. The term of lease was also stated—usually one year—and the amount of yearly rent. A clause often occurs to the effect that the house is in good repair. The doors, door-frames, and some other woodwork were removable, and the tenant might bring in his own. If let with the house, they were inventoried. The tenant covenanted for all repairs, the nature of which might be specified. In the rainy climate, houses of sunburnt brick required constant and immediate attention. The accessaries of the house are often mentioned, such as a court, a barn, a shop, a cellar, a well, but we have little exact information as to the usual accommodation in old Babylonian houses. They rarely exceeded one storey in height.

The Code enacted that, if the landlord wished to recover possession before the end of the lease, a fair proportion of the rent should be remitted. The tenant had full possession and could pledge the house.

A common plan was to lease a piece of land to a man to build upon. After a somewhat longer lease than usual the house came into possession of the landlord. The Code fixed the cost of building a house per area.

Boundary or common walls were often the cause of dispute, usually as to which neighbour should repair, or as to the right to fix beams. The condition that one might build it if the other might fix beams in it, *e.g.*, was matter of contract. Most of the sections relating to houses have disappeared from our copies of the Code.

Labourers were often specifically hired, the most common cases being to get in the harvest, for building, and to transport goods by road or canal. The wage was a matter of contract, but the Code fixed minimum rates. Cattle for ploughing, carting, and working the irrigation machines, etc., and the associated agricultural machines, chariots for journeys, and ships for voyages as well as for freight, were often hired.

The pastoral pursuits were highly developed. The kings and many rich land-owners, and, above all, the temples, owned large flocks and herds. As a rule, these were committed to shepherds, who gave a receipt for the animals entrusted to their care, and were bound to return the flock or herd undiminished and with proper increase after breeding, or to answer for them. A shepherd had to make good all loss due to his neglect. He was frequently a foreigner, belonging to one or other of the nomad races who roamed the deserts or open pasture.

Questions of currency arose. The standard by which the precious metals were weighed varied from city to city, and there is often a clause specifying the standard in which money should be repaid. The Code enacted that this could not be enforced. Payment in kind was to be accepted, and a creditor was bound to accept even goods at fair value.

Debt was secured on the person of the debtor, and in default of means must be worked off. But the father of a family could name a substitute—wife, child, or slave—to work off his debt. To mitigate the hardships of this custom, the Code protected the hostage for debt from ill treatment, and fixed the term of servitude at three years as a maximum, whatever the debt. If the hostage died a natural death, the creditor had no further claim; but, if he contributed by cruelty, he had to restore son for son or pay for the slave. He could sell the slave hostage, but not if it was a slave-girl who had borne children to her master. She had to be redeemed by her owner, *i.e.* replaced by a different pledge.

Pledges were often taken as security for debt, but could not be sold without consent of the real owner. Frequently, when profitable, as a slave or cattle might be, their value was taken by the creditor in lieu of interest. Pledges were often left with the debtor and served merely as security. Personal guarantee on the part of friends that the debtor would pay at the proper time was often given, and the debtor sometimes had to pay for this assistance.

Trade was thriving, and Babylonian merchants carried on a considerable overland commerce to distant lands. The foreign products in their markets were numerous and brought from afar. Palestine, Cappadocia, Elam, and the lands beyond these countries were conspicuous sources. Many who stayed at home took shares in enterprises conducted by travellers. Merchants received money or goods to be traded away. The Code regularized this practice, enacting that the parties should exchange receipts, and that demands should be based on documentary evidence. The agent had to deposit an inventory and receipt for what was entrusted him, and no claim could be substantiated except by such receipt. Profits were good; the agent must pay 100 per cent, whatever his own gains. He was not responsible if he was robbed on his travels, but had to be put on oath as to the extent of his loss. Profits were usually divided equally by contract on the termination of the business.

These trade journeys afforded the opportunity for transport. A considerable amount of forwarding was done. Debts were paid abroad by travelling merchants and purchases executed at a distance. The Code enacts that a merchant shall give a receipt for the consignment, take all responsibility, and exact a receipt on delivery. If he should default in any respect, he was penalized five-fold. Deposit was a common transaction, especially the warehousing of grain. The Code fixed a statutable rate of one-sixtieth for warehousing. The warehouseman took all risks, and paid double for all shortage, but only if he had given a proper receipt. If the goods were stolen from him, he had to recover as best he could; but he had no relief against the depositor.

The network of canals supported a vast amount of water traffic. Ships, whose tonnage was estimated by the amount of corn that they could carry, were incessantly plying for hire between the great cities. The contract specified the goods and their destinations, and named the charges. These were for carriage solely, but, when a whole ship was employed, the rations for the crew were charged specifically. The Code fixes the price for building, navigating, etc., and insists on a year's guarantee with a new boat. The captain was responsible for ship and freight, and bore all risks. If he sank a ship, he was fined half its value, even if he refloated it. In the case of collision the boat under way was responsible for damage to a boat at anchor.

The Code regulated traffic in liquor, fixing a fair price for beer, and severely punishing a tavern-keeper for allowing disorderly conduct or treasonable assembly. The hostess was to hale offenders to the court—which seems to imply efficient and accessible police officers, or perhaps the command of able-bodied slaves.

Payment through a banker, or by written draft against account, was usual. Bonds to pay were treated as negotiable. A man could usually borrow without interest from the temple treasury of his city, for a fixed term, but paid interest if his debt were left overdue. It is not quite clear, however, whether this privilege did not imply some relationship to the temple, possibly only full citizenship. Merchants, and temples in other cases, charged interest at varying rates, usually high, commonly 20 to 30 per cent, but for short terms. Long loans were rare, if known at all. A feature which seems to us somewhat irrelevant is that the money or corn appearing in a loan or other transaction is often specified as to origin and purpose; *e.g.*, so much silver, part of the rent of a house, is lent to hire reapers; so much corn produce of a peculiar field is lent to buy oil, or to pay a tax. The exact purpose of such specification is not clear, and, so long as the loan was punctually repaid, there seems no reason to restrict its use. No penalty is named for using the accommodation for a different purpose from that for which it was taken. Possibly there lurks in this specification an analogy to our 'for value received,' or it was

an acknowledgment of the moral claim of the borrower on the lender for accommodation.

LITERATURE.—For laws relating to marriage, inheritance, etc., see 'Semitic' sections of artt. MARRIAGE, ADOPTION, ADULTERY, FAMILY (Assyro-Babylonian), and INHERITANCE (Babylonian). The peculiar situation of vestals and vowed women comes under HIERODOULOI (Semitic), HOLINESS (Semitic). For details cf. C. H. W. Johns, artt. 'Babylonian Law' in *EBr*[11] iii. 115, 'The Code of Hammurabi' in *HDB*, v. 584, as well as *Babylonian and Assyrian Laws, Contracts, and Letters*, Edinburgh, 1904. The most important addition to the bibliography there given is J. Kohler and A. Ungnad, *Hammurabi's Gesetz*, Leipzig, 1909, which gives full transcription, complete vocabulary, juristic excursus, and about 1400 transcribed and translated legal documents of the Hammurabi period, to be followed by a large selection from the Assyrian and Neo-Babylonian periods. This body of material affords an almost complete text-book for the study of Babylonian law. C. H. W. JOHNS.

LAW (Biblical, Old Testament). — Ancient peoples, almost without exception, regarded their laws as of divine origin. At the top of the front side of the stele containing the famous code of Ḥammurabi, the sun-god Shamash is pictured in a bas-relief seated on his throne and presenting to the king the laws which follow. In ancient Egypt, law was attributed to the gods (J. H. Breasted, *Hist. of Egypt*, London, 1906, p. 242). Ex 34[1-28] (J) represents Jahweh as dictating the primitive decalogue to Moses, who acts as His amanuensis, and the later tradition of Ex 24[12] states that Jahweh Himself 'wrote down the Ten Words' (cf. Ex 31[18]). Dt 6[1] implies that all the commands contained in that law-book were given directly to Moses by Jahweh. The late priestly tradition (*c.* 400 B.C.) of Ex 25[1] and 35[1] states that all the laws found in Exodus, Leviticus, and Numbers were a direct revelation from God through Moses. Demosthenes asserted that 'every law is a discovery and gift of God' (*Aristogeit.* A, 16, ed. F. Blass, Leipzig, 1888). Even Cicero declared: 'Lex nihil aliud nisi recta et a numine deorum tracta ratio' (*Phil.* xi. 12). The belief that underlying all man-made laws was a perfect law, emanating from divine mind, was the foundation of Roman law. It is reaffirmed by W. Blackstone, who says:

'This law of nature being coeval with mankind, and dictated by God Himself, is of course superior in obligation to any other. It is binding over all the globe, in all countries, and at all times: no human laws are of any validity, if contrary to this; and such of them as are valid derive all their force and all their authority, mediately or immediately, from this origin' (*Commentaries*, ed. London, 1857, i. 27).

Thus it is that each age has expressed the conviction that law is not a mere human convention, but is conditioned by the eternal nature of things, and that behind nature is Intelligence and Will.

A more careful study of the ancient sources and the contributions of anthropology and sociology have shed new light upon the origin and growth of law. The ancients were not wholly ignorant of man's part in its development. In the epilogue to his great code Ḥammurabi declares: 'If a man heed my words which I have written upon my monument, do not efface my words, do not alter my monument, so may Shamash prolong his reign.' Recent discoveries have brought to light some of the older Sumerian laws which he incorporated (cf. *OLZ* xiii. [Leipzig, 1914]). Egyptian kings, like Horemheb of the XIXth dynasty, freely enacted new laws and gave them equal authority with the older laws which tradition ascribed to the gods (Breasted, *op. cit.* p. 242).

Notwithstanding the late traditions, which represent all Israel's laws as being directly dictated by Jahweh, the OT contains some of the best existing illustrations of the different stages by which law evolved. The custom of blood-revenge is a survival of the primitive stage of self-help, when, in the absence of an organized government, the individual or the clan undertook to redress all grievances (see, further, art. BLOOD-FEUD). It is typical of customs that were inherited from the pre-historic past and represented the crude beginnings of law. Some of them were based on wide observation and experience, and were beneficial to society; others were but the result of savage ignorance and superstition. Law began to take definite form when men began to refer their cases to an arbiter or judge. Ex 18[13-27] contains a vivid illustration of this important stage in the evolution of law. It represents the people of Israel in the wilderness bringing their cases of dispute to Moses for his judgment. The decisions which he rendered were called *tôrôth*. The singular of this word, *tôrāh*, is the common Hebrew designation of 'law,' and comes from a root which means 'to throw out' (the lot), then 'to direct,' 'to teach.' It corresponds closely to the two terms used in Homer for 'law': δίκη, which means a way pointed out, a course prescribed by precedent, and θέμις, that which is laid down. In 1 S 30[21-25] is found a clear example of the way in which such a decision grew into a judicial precedent possessing all the validity of the law. After David's followers overtook and vanquished the plunder-laden Amalekites, he decided, as the chief of his clan, that,

'As is the share of him who goeth into battle,
So is the share of him who remaineth with the baggage,
They shall all share alike.'

The historian adds significantly, 'And from that time he made it a statute and a precedent for Israel to this day.'

Usually the *tôrôth*, or decisions, were rendered by the priest, the representative of Jahweh, by the use of the sacred lot. Mal 2[6f.] states that 'the *tôrāh* of truth was in the mouth of the priest . . . and the people were wont to seek the *tôrāh* at his mouth.' It is evident that in the mind of the people these decisions enjoyed from the first the divine sanction. This fact represents the germ of the later Hebrew theory of the divine origin of law. Until the days of Nehemiah the oral decision of the priests was apparently ascribed equal authority with the written law.

The other common Hebrew word for law, *mishpāṭ*, is equally suggestive. It originally meant a specific judgment or decision. In Ex 21[1] it is used in the plural as a title for the decisions or judgments which embodied the fundamental principles of early Israelitish law and custom. At first it apparently referred only to civil law, but in Lv (*e.g.* 18[4. 5. 26]) it is extended to include ceremonial laws. The authority attributed to the decision (*tôrāh* or *mishpāṭ*) rendered by the priest, or tribal chief, or king, or civil judge gave ample opportunity for the development of custom and law. Ordinary cases were decided according to older precedents. When new cases arose, this flexible system made it possible for the judges to decide them, and, in so doing, to establish new precedents which, if just, soon gained the authority of definite laws. The passage already quoted from Ex 18 plainly illustrates the process. When the cases referred to Moses became so many that he did not have time to pass judgment upon them all, he appointed judges to decide all the questions that were analogous to those covered by *tôrôth* already rendered by him (v.[20]). 'They judged the people at all times, but the difficult cases they brought to Moses' (v.[26]). The principles which he thus concretely promulgated represent the historical foundation of the later tradition that he was the author of all Israel's laws.

Among the Hebrews, as among most primitive peoples, the customs and the oral laws, which grew up on the basis of those decisions, long sufficed. The OT contains some interesting illustrations of the gradual transition from oral to written and definitely codified law. The nine (at first probably ten) groups of ten words or decalogues, found in

Ex 21^1–23^{19}, are the result of an attempt to embody the important principles of Israel's early law and customs in systematic, compact form (cf. C. F. Kent, *The Founders and Rulers of United Israel* [=*Historical Bible*, ii.], London, 1909, pp. 209–219). Each decalogue deals with a distinct subject and is divided into two pentads, indicating that they were first intended to be committed to memory—each law being associated with a finger or thumb of the two hands—rather than to writing. Thus, *e.g.*, the decalogue in Ex $21^{2\text{-}11}$ deals with the rights of slaves: the first pentad ($21^{2\text{-}6}$) with male slaves, the second ($21^{7\text{-}11}$) with female slaves. The first five decalogues contain civil laws and are very explicit. They clearly represent earlier customs and precedents—*e.g.*, 'If a man strike another so that he die, the manslayer shall be put to death' (21^{12}). The remaining decalogues consist of moral and ceremonial laws, and are simply mandatory or hortatory—*e.g.*, 'Thou shalt not wrong nor oppress a resident alien, for ye were resident aliens in the land of Egypt' (22^{21}).

In time these primitive Hebrew decalogues were committed to writing. They may at first have been inscribed on tablets and set up in the Israelite sanctuaries. They represent the same stage in the development of Hebrew law as the more elaborate Code of Hammurabi, which was inscribed on stone and originally set up in order that (as is definitely stated) the oppressed who had a suit to prosecute might read and understand these laws and learn how to secure justice (C. H. W. Johns, *Babylonian and Assyrian Laws*, Edinburgh, 1904, p. 393). Typical western analogies are the Code of Gortyn, set up in the market-place of that ancient Cretan town, and the Twelve Tables of the Romans.

The next step in the development of law was the modification, expansion, and codification of the earlier codes to meet the needs of a more advanced civilization and to embody the higher ideals of the later age. Again the OT contains excellent illustrations of this process. The Hebrews and most Oriental nations failed to develop an authoritative, legislative body. Even the Romans for centuries kept alive the legal fiction that the Twelve Tables were the sole foundation of all Roman law. During the latter half of the 7th cent. B.C. it became evident to the enlightened priests and prophets of Judah that the primitive laws of Ex 21^1–23^{19} (which were probably formulated as early as the 9th cent.) were inadequate. Many questions not contemplated by these earlier laws had arisen. Under the preaching of the great ethical and social prophets of the 8th cent., many new moral and religious principles had been proclaimed and accepted by the leaders of the nation. The spirit of reform that was at work called for a definite programme, if it was to bear permanent fruits. A detailed comparison of the primitive codes and of the laws embodied in Deuteronomy reveals the methods, as well as the work, of these self-appointed lawgivers. Three-fourths of the older laws are represented in the later code: some are simply reaffirmed, others are abrogated, the majority are modified or expanded in accordance with the principles of justice, humanity, and loyalty to Jahweh enumerated by Amos, Hosea, and Isaiah. The result is a remarkably complete code, well adapted to the needs of the Judæan kingdom about 625 B.C., and yet put in the mouth of Moses, whose early precedents it incorporates. 2 K 22^1–23^{25} contains a remarkably clear account of how this privately-prepared code was promulgated. Evidently it had the sympathetic support of the ruling party and of an able group of reformers. At the opportune time it was brought from the temple, formally presented to the king, read before him and the assembled people, and then solemnly accepted by him in behalf of his nation. The final step was its rigorous enforcement by Josiah.

Interpreted in the light of the earliest records, Israel's legal history illustrates the five closely related stages in the growth of law. The first is the period of relative lawlessness, when the individual or the clan is the only recognized authority and human relations are determined by customs, most of which originated in the pre-historic past. The second stage is when questions of dispute are referred to tribal chieftains, priests, or judges, and their decisions are held to be binding not only in specific, but also in analogous, cases. The third stage marks the development of a definite oral law, based on earlier customs and precedents, and transmitted in the form of decalogues or concrete typical formulas. The fourth stage is when the primitive oral laws are committed to writing. The last stage is when the primitive laws are modified, expanded, and codified, and new laws are constantly being promulgated to meet the needs of a developing civilization.

LAW (Biblical, New Testament).—1. Fading of the Law in the NT.—In the Synoptic Gospels the Jewish Law forms a large part of the background of the narrative; but from that point forward less and less is heard of it, until it disappears entirely, and another standard of conduct takes its place. This change was due in the main to the action of the two great persons who were the founders, the one of Christianity and the other of Gentile Christianity. Both were too great to remain under the yoke of the Law as the Jews understood it; but, while the first never had any open conflict with the Law, the second waged a war upon it which began early and continued long.

2. Jesus and the Law.—Jesus was brought up in a pious home, in the religion of the Law which to the ordinary Jew in Palestine was no burden (Lk 1^6). 'He never learned,' we read in Jn 7^{15}; *i.e.*, He did not follow a life of learning nor place Himself under a scribe. His sympathies did not incline Him to men of that class. On the other hand, He lived in full sight of Gentile life, witnessing the social and religious usages of the heathens, and He had no aversion to people who were not Jews, and we never find Him boasting, as does the Jew of Ro $2^{17\text{-}20}$, of the superiority which the possession of the Law gave to the Jews. Yet He regarded the Law with profound respect; He considered it to be the way of life that God had given to His people, and He experienced little reaction against it. He regarded it chiefly as a moral code; as a system of ritual, He was less impressed by it, and the tradition which the scribes had built up around it He must from early times have regarded with indifference, as being apart from the way of life that God had given to His people, and in some points inconsistent with it. He regarded the Law as containing, so far as it went, all God's will and all man's duty, though those who sought for perfection had some aims which transcended its precepts; and He was able to say (Lk 16^{17}, Mt 5^{18}) that it was easier for heaven and earth to pass than for one tittle of the Law to fail. The passage, Mt $5^{21\text{-}45}$, in which Jesus appears as definitely superseding commandments of the Law by more ethical commandments of His own, belongs certainly in its arrangement, and also in much of its detail, to a later state of things; the Law is made ruder than it was as then practised, in order to act as a foil to the more elevated injunctions set over

against it, and some of the sayings (*e.g.*, vv.[39-43]) reflect the controversy of the Church of Palestine with the synagogue. Jesus Himself upheld the religious system of His country, and encouraged others to do the same.

He did not, however, treat all the commandments of the Law as being on the same level. To the question, a common one in His day, 'Which is the greatest commandment of the Law?' He replies by citing two precepts of the Pentateuch, the first requiring love to God with all one's powers, the second love to one's neighbour (Mt 22^{34-40}). The Golden Rule (*q.v.*), stated by Him in the positive form that one must do to others what one desires that they should do to oneself, is said to be the cardinal injunction on which hang all the Law and the prophets (Mt 7^{12}). The comparison of the weighty matters of the Law with those less weighty is certainly authentic (Mt 23^{23}), and shows Jesus to have occupied the same position as the prophet Micah (6^8). The words of the prophet Hosea, who declares that God requires mercy and not sacrifice, are twice put in His mouth in the First Gospel (Mt 9^{13} 12^7 = Hos 6^6).

We find, accordingly, that Jesus was never accused, as were Stephen and St. Paul, of any attack on the Law. On several points He pleads for an elastic view of the Law. He is not rigorous as to the Sabbath or in the matter of fasting; but on these points general opinion seems to have upheld His views. The only instance of His deliberately setting aside a law of the Pentateuch is in connexion with divorce, for which Moses provided, but which Jesus held to be quite inadmissible (Mk 10^{2-12}). Divorce, He held, was allowed to the Israelites when they were in a backward state, and unable to support the whole of God's will as seen in the original constitution of human nature, which made marriage indissoluble. It may be doubted if Jesus used the words 'except for fornication'—that would of itself bring marriage to an end.

The example of Jesus could thus be appealed to by those of His followers who held the Law in honour and practised it. But He also prepared the way for those of them who sat loose to it and regarded it as a code of morals and scarcely more. He taught no ritual, and stood somewhat aloof from the great ritual system of His country. He was impatient of the minute and burdensome tradition which the scribes had built up around the Law and which the Pharisees regarded as being itself the Law and diligently practised. He formally broke with that vast system which sought to provide rules for every case that could occur in human life, and to bring under strict regulation the whole of conduct and action. In Mk 7^{1-23} He repudiates the authority of the tradition, as being made by man, not given by God, and in many cases opposed to the law of God. And the Law itself was a very different thing from the law with the tradition added to it. The ignorant could keep it; the Gentiles could accept it.

Jesus was opposed with His whole soul to the pedantic rigour of the system of the scribes because their multiplied rules depressed rather than elevated the people, and drove away from the true religion rather than attracted to it. The tradition, as they applied it, was a merciless institution, binding heavy burdens on men's shoulders, shutting them out of the kingdom of heaven, losing sight of the weightier matters of the Law, mercy and justice and faith, in the strict attention paid to the small matters, mint, anise, and cummin (Mt $23^{4.\ 13.\ 23.\ 25}$; all these verses are in Q). In Mk 6^{34} He regards with compassion the multitude which has prevented the repose that He sought to give His disciples, because they are harassed and scattered like sheep without a shepherd, and He begins diligently to teach them. He taught them doubtless of a lighter yoke, of more practicable duties than had generally been asked of them. He taught them that the Law was not their only link with God, that He was their Father, and that they had access to Him at all times, and could learn for themselves, by meditation and prayer, what He asked of them. By His teaching He brought the question of the Law to the position in which the Church took it up; appeal could be made to Him both for continuing to practise the Law (for He Himself had done so) and for a spiritual attitude in which the Law parts imperceptibly with its authority.

3. **Attitude of the Jews in Palestine.**—In Palestine the followers of Jesus continued after His removal to be good Jews. They frequented the Temple, gave alms, attended to their prayers, and even—if Mt $5^{23f.}$ is not to be taken figuratively—offered sacrifice (see Ac 21^{23-26}). They observed the Levitical laws as to clean and unclean in food and other matters. Circumcised Jews would see no reason in their attachment to Christ for throwing away the advantages of their position. To their piety as Jews they added another piety as followers of Jesus; they kept His commandments in addition to those of Moses, and began to collect them into a code, as we see in Mt 5^{21-48}, as well as in collections like Q and in the *Didache*.

When the gospel spread to Gentile soil, new questions arose. Those who named the name of Christ naturally sought to meet together and to practise their common worship in the form of common meals. From this sprang the first great controversy of the Church as to the terms on which Jewish and Gentile Christians could live together. The strict Jewish Christians held that Gentile believers must become Jews and keep the whole Law; and in this they only upheld the practice which obtained in the Jewish missions to the Gentiles. But Jewish missions had been great failures for this very reason; and easier terms had to be sought for the Gentile converts. In Ac 15 the Church at Jerusalem draws up an easy rule: Gentiles are to be admitted to the Church on agreeing to adopt the Jewish standard as to sexual intercourse, to have their meat for table prepared in the Jewish fashion, and to abstain from meat offered to idols. (It seems scarcely possible that the addition to these outward abstentions of the far-reaching ethical rule added in Cod. D, 'and not to do to others what they would not have done to themselves,' can be original.) Of this compact little is heard afterwards. The claim, moreover, made in Ac 10 for Peter, that he was the first to be led by Providence to see that the barrier which kept Gentiles outside the Church ought no longer to prevail, can scarcely stand against the evidence of Ac 15 and Gal 2 that Paul and Barnabas went to Jerusalem to get the question settled as to the terms on which Gentiles should be received, and that Peter afterwards broke through the adjustment then made. If the story of Peter and Cornelius has a historical kernel, it probably belongs to a later period than that in which Acts places it. The question may have arisen in more parts of the world than one, and have been settled in various ways. In some of the Pauline churches we know that it occasioned acute controversy and that the solution which Paul aimed at and no doubt attained was that the Gentile Christians were recognized as children of Abraham without coming under any obligation at all to the Jewish Law, and that it was recognized that the difference between Jew and Gentile had ceased to be regarded; they were all one in Jesus Christ.

4. **St. Paul and the Law.**—The question of the

attitude of Christian missions to the Law must have occupied Paul's mind as soon as he became convinced of his own call to carry the gospel to the Gentiles, *i.e.*, if we are to accept his own statement in Gal 1[16], from the time of his conversion. Ro 7, with its incisive definition of the character of the Law and its relation to those wearing human nature, shows how impossible it was for him to demand of the Gentiles obedience to a Law which brought so little comfort to himself. In that chapter he arrives at a different conclusion as to the Law from that of his own upbringing. It is idealized as Jesus idealized it, and regarded as a searching standard of entire perfection, dealing not with acts but with motives and springs of conduct, and holding up to man all that he ought to be. It is holy and just and good; to keep it would be to find the promises fulfilled that one should live by it (Gal 3[21]). But, alas! it is too good for man to live at peace with it. The Law is spiritual, but man is carnal and cannot love the standard of ineffable goodness. It acts as an irritant on him and brings to the surface his innate weakness and recalcitrancy, and so, while his reason approves of it, he cannot keep it, and is driven by it to despair.

The view of the Law which is here set forth as a matter of personal experience, and a truth of psychology, is set forth again and again in the Pauline Epistles as a general doctrine. So the Law acts, so it was intended to act, on those who are placed under it; it is by God's decree and counsel that it does so. The Law is the strength of sin (1 Co 15[56]), which is the sting of death; it came in to multiply transgression (Ro 5[20]), for where there is no law there is no transgression (4[15]); the Law, therefore, works wrath. Every one who does not keep it in every point is under a curse (Gal 3[10]). The ministry by which it was introduced into the world was a ministry of death (2 Co 3[7]).

The Apostle was confirmed in this view of the nature and effects of the Law, to which his own experience had brought him, by his missionary practice and experience. He saw that the Gentiles were being saved quite apart from the Law. The Law was not proposed to them as in any way a condition of salvation; only Christ crucified was declared to them, and, on their believing in Christ crucified, the Spirit at once took possession of them, and they began to exercise the gifts of the Spirit (Gal 3[1-5]). From this he inferred that God was, as a matter of fact, justifying the Gentiles by faith (Gal 3[8]), and from this he drew the broad conclusion that the method of salvation by keeping the Law was now discontinued by God in favour of the new method—that of salvation by faith in Christ alone—and that this method now alone availed (Ro 3[21-28]).

Holding this very radical doctrine about the Law, the Apostle could no longer follow up his career as a Jewish Rabbi (Ph 3[7-9]); and he became the object of the bitter hatred of the Jews wherever he went, and also of many Jewish converts to Christianity, who represented him (Ac 21[21. 28]) as teaching that the Jews living among the Gentiles should renounce their allegiance to Moses, and should give up circumcising their children and the observance of Jewish customs. That this was a gross exaggeration there can be no doubt; he himself adhered to many a Jewish custom, and he did not interfere with such practices on the part of other Jews (1 Co 9[20]). But to Gentiles he made it quite clear that the Law was no condition of salvation for them; and to Jew and Gentile alike he proclaimed that salvation did not come through the Law, but only through faith in Jesus Christ (Gal 2[15f.]). To those who sought to make his Gentile converts Judaize, practise circumcision, and observe Jewish festivals and Jewish restrictions in diet, he offered, as the champion of the liberty of these converts, an uncompromising opposition.

5. Position of the OT in Pauline churches.—Something must be said of the place of the OT in the churches of Pauline foundation. The converts were supposed to be familiar with the history and the words of the OT; it was the revelation of which the gospel of Christ was the consummation and flower; it was full of Christian things; the promises recorded in it were now being fulfilled to believers in Christ (1 Co 10[11], Ro 1[17.]); its types were coming to reality in their experience. The Law and the Prophets were Christian books, and the discerning could find Christ in them in most unlikely places. The moral standard of the OT, an object of envy to the Gentiles, was from the first that of the Church; the heathen converts were at once lifted up to it, though they accepted its requirements not from the dead code but from the living spirit of Christ, and were taught, as He had taught, that love was the fulfilling of the Law. The provisions of the Law were not quoted either in setting up the standard of Christian conduct or in correcting the lapses which took place from it. Nor was any appeal made to the OT in arranging the internal affairs of the Church; in these the mind of Christ is the supreme authority, where the Apostle's own authority does not suffice (1 Co 7[10] etc.). When disputes break out among believers, the Apostle advises that recourse should not be had to the heathen courts, but that an arbiter should be found among their own number. The OT Law has completely disappeared as law for the Gentile converts.

The arguments by which Paul sought to account for the Law, which in his missionary practice he had deprived of all authority, are of various kinds. Some consist of bold speculations on the divine economy of salvation, some are Rabbinical devices, bringing a new meaning out of a text of the OT. Of the former kind the most powerful and impressive is that of Gal 3[23]–4[7], where he speaks of the Law as the tutor placed over the growing heir to check his freedom till the day arrives when he attains his majority. This had been the case with mankind when Christ came, and in Him the spirit of adoption took possession of the human race now entering on its inheritance, so that the guardian is no longer needed. The Law is treated in this chapter as being on a level with those constraining influences, or spirits of the world, under which the Gentiles also were confined, to be prepared for Christ. A great thought also is contained in the argument that the promise was antecedent to the Law, which could not set it aside, and that the promise to Abraham, made to him before circumcision was instituted, is fulfilled directly to the Gentiles who, like him, take faith and not works for their guiding principle and, therefore, are Abraham's true children (Gal 3[14-22], Ro 4). Of another calibre are the arguments that the seed, in the singular, to whom, with Abraham, the promise was addressed, must indicate an individual person, and that Christ is that person, faith in whom now saves (Gal 3[16f.]), and the argument that the radiance on the face of Moses when he came down from Mount Sinai was fading away, and that he put on a veil to hide that circumstance from the Israelites, who think that the radiance still rests on the Law, though it is quite outshone by the exceeding radiance of Christ (2 Co 3[7-18]).

6. Conclusion.—The controversy about the Law subsided in Paul's life-time. In Galatians it is acute; in Romans the argument is free from passion; in the Corinthian Epistles there is little of it; in the later Epistles only a few phrases are found to show that he still stands where he stood (Ph 3[6-9], Col 2[14-17]). On the other hand, the com-

mandments of Christ are valid wherever they apply. This is the case in every part of the Church. The eternal validity claimed by Christ for the old Law (Lk 16^{17}) is attached to the words of Christ Himself (Mk 13^{31}), and the law of love is spoken of both by Paul and in many of the later books of the NT as the sum of Christian duty (Gal 6^{2}, Ro 13^{8-10}, Ac 20^{35}, Ja 1^{27} 2^{8}, He $13^{1.\ 16}$, Jn $13^{34f.}$). In the Fourth Gospel the Law of Moses is spoken of as 'their law' (Jn 15^{25}), as if Christ had not acknowledged it and His followers had nothing to do with it.

LAW (Buddhist).—In the strict sense of the word there is no Buddhist law; there is only an influence exercised by Buddhist ethics on changes that have taken place in customs. No Buddhist authority, whether local or central, whether lay or clerical, has ever enacted or promulgated any law. Such law as has been administered in countries ruled over by monarchs nominally Buddhist has been custom rather than law; and the custom has been in the main pre-Buddhistic, fixed and established before the people became Buddhist. There have been changes in custom. But the changes have not been the result of any enactment from above. They have been brought about by change of opinion among the people themselves. And in order to ascertain whether such change of opinion was, or was not, due to the influence of Buddhism it would be necessary, in each case, to ascertain what the custom had been before the introduction of Buddhism, in what degree or manner it had changed, and what had been the probable cause of the difference shown. Unfortunately our knowledge of the history of social conditions in Eastern Asia, whether before or after the 6th cent. B.C., is at present much too meagre to enable us to deal with the subject in so thorough a manner. Nothing has yet been written on the subject, and only a slight beginning may yet be made.

The Buddhists, for instance, had from the beginning what we term their canon law, what they called *Vinaya, i.e.* 'Guidance.'[1] It consists of 227 rules to regulate the conduct of the members in outward affairs, and some supplementary chapters on special subjects. These 'articles of association' are quite apart from the Buddhist religion, and indeed have little or nothing that is specifically either Buddhist or religious. No religious community could avoid quarrels and disruption without the assistance of rules of the kind. Now, just before the rise of Buddhism there were quite a number of such Orders. The names of ten of them are preserved in the *Aṅguttara*.[2] Unfortunately, the records of nine out of the ten have perished. They had no writing; and, as each Order died out, both its doctrine and its canon law, kept alive only in the memory of its members, died out also. Only one of these pre-Buddhistic communities has survived—that of the Jains; and the internal regulations of the Jain Order have not yet been published. It was inevitable that the early Buddhists should have adopted in many details the customs already followed by these other wanderers. But in the main, no doubt, the rules were Indian in origin, the common inheritance of all the schools.

There is nothing in the 227 rules of the *Vinaya* which would be included under the English term 'law' in its modern sense. In the explanations and applications, however, of the rules, as interpreted in the chapters of the Order when a particular case came up for decision, there is a good deal of what we should now call case law. For example, Rule No. 3 is as follows:[1]

'Whatsoever Bhikkhu shall knowingly deprive of life a human being, or shall seek out an assassin against a human being, or shall utter the praises of death, or incite another to self-destruction, saying, "Ho! my friend! what good do you get from this sinful, wretched life? death is better to you than life!"—if, so thinking, and with such an aim, he, by various argument, utter the praises of death or incite another to self-destruction—he, too, is fallen into defeat, he is no longer in communion.'

In the elucidation and discussion[2] of this rule a very large number of all possible cases of alleged infringement of it are given. The cases are not real ones that actually happened, but hypothetical. The offences, or alleged offences, are sorted into grades, which are distinguished one from another as modern English law-books distinguish between assault, aggravated assault, manslaughter, and murder. The penalty for the gravest kind is exclusion from the Order; that for the lesser kind is suspension in varying degrees, and for varying duration.

For instance, a man digs a pit; that is no offence. He digs it in the hope that X will fall into it; that is a *dukkaṭa* ('evil act'). The man (X) falls into it; that is another *dukkaṭa*. He is badly hurt; the man who dug the pit is guilty of a 'grave offence' (*thullachchaya*). The man falling is killed, then the digger of the pit is guilty of 'defeat' (*pārājika*), involving expulsion.[3]

This is not criminal law. It is intended only to keep the Order pure; and the penalties are very mild. But it is interesting to find in these discussions the doctrine of malice aforethought, or accessory before (or after) the fact, used much as a modern jurist would use it, and leading up to decisions which are very much what a modern jurist would give.

H. Oldenberg, in his introduction to his edition of the text, has carefully considered the manner in which these documents enshrining the Buddhist *Vinaya* were gradually built up, and their approximate date. He concludes that the whole text, as we now have it, was in existence within a century of the Buddha's death; and that much of it—for instance, the 227 rules referred to above—is older, and may go back to the generation in which Buddhism arose. It will be seen at once that this is quite modern compared with the Ḥammurabi Code of customary law. Such value as these Buddhist documents have in the history of law depends upon their being the oldest legal texts which apply the principles of equity to the problems to be solved. They do not pretend to put forward any code of law. They belong to a stage beyond that, and only attempt to utilize for the practical requirements of an association of co-workers the results of previous thought on legal points. We shall probably never know how far these results may have been modified or softened by the Buddhists for the purpose of application to the new problems to be met.

The administration of this law (if law it can be called) was very simple. The decision lay with the Chapter, which was composed of all members of the Order resident within a certain boundary. The boundary, also fixed by the Chapter, was so arranged as to secure the possible attendance of from a dozen to a score of members. All the members were equal, and the senior member presided. If the matter came to a vote—which seldom happened—the voting was by ticket. Complicated matters were referred to a special committee for report, and the decisions in most cases were unanimous. The Chapters had no authority to

settle any matters not included in the *Vinaya*, or to deal with property not the property of the Order. All such matters were the province of the State, to be settled according to the customs of each locality. They were regarded as secular, not religious. Thus customs as to marriage and divorce, the inheritance and division of real or personal estate, the law of contract and criminal law, were all purely secular matters to be determined by the sense of the lay community. This continued to be the attitude of mind of the Buddhists throughout their long and varied history.

The expression 'Buddhist law' as used of law administered in English courts in Ceylon and Burma has a very different meaning. When the English had taken the whole of Ceylon, they introduced English law except on certain matters, which, they imagined, would or might offend the religious feelings of some of the inhabitants. Thus, with regard to marriage and inheritance, they granted to the Dutch the Roman-Dutch law on these points, and to the Hindus and Muhammadans the Hindu and Muhammadan law respectively. Taking for granted, in their ignorance of Buddhism, that the relation between law and religion on these points must be the same for the Buddhists as for these others, they decided to incorporate into the law of the Island the customs prevalent there among the majority, the Buddhists, on the same points. For this purpose they made inquiries as to what those customs were, and finally recognized two different groups of custom as valid, the one for the low-country Sinhalese, the other for the Kandians in the hills. By so doing they made customs current at the beginning of the 19th cent. valid for ever, and deprived the lay community of any power of change or adjustment which they possessed. On the other hand, they soon began, and have continued, to change the customs by two methods, one of interpretation by judicial decisions, the other by legislative enactment. By the latter they have introduced the registration of marriages, and conferred upon the laity the power of making wills.

The original report on Kandian customs has been recently discovered and a translation of it published by C. J. R. Le Mesurier and T. B. Pānabokkē, under the title *Nīti Niganḍuva* (Colombo, 1880). The course of events in Burma, since it was taken over, has been very similar. But, whereas we know nothing or next to nothing of Sinhalese law before the conquest, we have for Burma a most valuable summary of the gradual growth of the customary law in E. Forchhammer's *Jardine Prize Essay* (Rangoon, 1885). He shows how the customary law, originally introduced there from S. India in the 10th cent. A.D., has been constantly but slowly modified by the influence of the Buddhist laity. He mentions also the numerous codes in which such alterations have been incorporated. D. Richardson has translated one of the latest of these codes under the title *The Damathat, or Laws of Menoo*, Rangoon, 1906.

LITERATURE.—The authorities are given in the course of the article.

LAW (Celtic).—**1. Law.**—Of the legal institutions of the ancient Celts we have no knowledge beyond the evidence of philology and the statements of Cæsar with regard to Gaul. Both the Goidelic and the Brythonic branches of the Celtic languages contain a term for law cognate with the Latin *rectus* (Ir. *recht*; Welsh, *rhaith*), while the words for judgment (Ir. *bráth*; Welsh, *brawd*) also correspond in these branches. Similarly, we have in both branches the same word for 'duty' or 'responsibility,' namely Ir. *dliged*; Welsh, *dyled*. Throughout the Celtic world, too, the organization of society had a tribal basis, and the legal institutions of the Celts were, consequently, in their origin tribal in character. This tribal character, though in a greater or less degree modified, survived unmistakably in Irish and Welsh law, as we know it in historic times. The evidence of Cæsar as to Celtic law (*de Bell. Gall.* vi. 13) relates to the druids, of whom he says that they decided practically all public and private disputes and assessed the fines and penalties in the case of any crime, as, for instance, homicide, while it was they also who gave their decision in the case of any dispute regarding inheritance or boundaries. In the case of refusal to abide by their judgment they had recourse to excommunication from religious ceremonies — a punishment which, in practice, involved the loss of all civil rights, and which survived as outlawry in Irish and Welsh law. The druids, according to Cæsar, formed an organized community, at whose head was a chief druid. It is, however, from the surviving Irish and Welsh legal literature that we derive most information concerning actual Celtic law. In Breton and Cornish there are no legal documents in existence, but we may surmise that ancient Breton and Cornish law was substantially the same as that of Wales, while the clan-system of the Gaels of Scotland, which was introduced by the Dalriad Scots, had, as its legal counterpart, institutions of the same essential character as those of Ireland. From a study of the Irish legal treatises, which reflect the older tribal system better than do the Welsh laws, we find that legal decisions were not given by judges appointed by the king, but by men of legal learning, who were of two grades: (1) the *brethem* (gen. *brethemon*, whence 'Brehon'), a term usually translated 'judge,' but more correctly 'advocate,' and (2) the *ollamh*, or law-agent. It is not impossible that, originally, recourse was had to the judgment of men of known probity, without regard to legal training, but, though the judicial powers of non-professional magistrates and noblemen survived in Ireland for certain purposes, it is clear that for all the more important cases a trained judge was necessary. Each district appears to have had a Brehon, and some more than one, while the king and the great magnates had Brehons of their own. Where there were more than one Brehon in a district, a litigant had a choice. In Welsh law there are plain indications of the earlier tribal basis as in Ireland, but there are also clear signs of the growth of the influence of the royal power upon law, and of the beginnings of a police system in a rudimentary form. In Ireland the policing of the law was practically in the hands of the tribal community, who, in the last resort, in the case of contumacy, could outlaw the offender. Side by side with the growth of the central power (possibly through the influence of England) we find much more prominence given in Wales than in Ireland to severe punishments, such as hanging and mutilation, and later to such a mode of trial as ordeal. It is interesting to find that, both in Ireland and in Wales, there were legal variations in different localities, and, in Ireland, this variation led to the broad division of *Cáin*-law, or law of general application, and *Urradhus*-law, which varied with the locality. The trial of cases arising under the latter type of law was open to noblemen and local magistrates, but cases under the former type could be tried only by trained judges. There is no clear evidence of any personal or collective legislation in ancient Ireland, but it would appear that portions at any rate of written custom were recited at some of the great annual gatherings, such as that of Tara, for which the Irish had so marked a predilection. It is sometimes stated that Irish legal practice did not distinguish between crimes and torts. This is true so far as the existence of a

pecuniary method of compensation was concerned, but motive nevertheless entered in, for in the case of homicide, *e.g.*, malice doubled the penalty (see CRIMES AND PUNISHMENTS [Celtic]).

It might be thought that the position of arbiter in Ireland was one which placed the community at his mercy. In practice, however, the Brehon had to exercise his judgment with great care, for, if on appeal his judgments were reversed, he was liable to lose his practice, to pay damages, and to lose any free land which might be in his possession. It was also generally believed that blotches would arise on the face of a judge who gave false judgment. The main function of the judge was to assess damages and compensation correctly, and the Irish legal treatises contain minute rules for this purpose. The task of obtaining the damages from the defendant lay with the plaintiff and his kin, and, when the defendant was obstinate, recourse was had to the process of distraint—a process which occupies a very large place in the extant legal treatises of Ireland. The scope and the nature of Celtic law, as it has come down to us, can best be estimated from a survey of extant Celtic law-books.

2. The law-books of Ireland.—A number of the legal treatises of Ireland were published in the Rolls Series, in five volumes, together with a glossary forming the sixth volume, at various dates between 1865 and 1901, under the direction of the Commissioners for publishing the Ancient Laws and Institutes of Ireland. These volumes contain not only the texts of the various legal treatises, but also translations of them, together with introductions which vary considerably in value. The MSS of these treatises contain, along with each text, a commentary to each section of it. Sometimes the commentary throws light upon the text, but frequently the commentary merely embodies the practice of a later age. Vols. i. and ii. and part of vol. iii. of the Irish Laws are occupied by the most important Irish legal treatise, namely, the *Senchus Mór* (or 'Great Collection'). Vol. i. and the first part of vol. ii. are occupied by one of the most elaborate portions of Irish law, namely, that of 'distress.' The two chief varieties named are 'distress without delay,' and 'distress with delay,' but possibly the most interesting type of distress mentioned is that initiated by 'fasting against' a person—a form of distress resorted to when an inferior pressed for payment from a superior. This form of distress had a powerful social sanction, since, when the inferior threatened to die of hunger at the door of the superior, the guilt of his death was regarded as falling on the superior's head (cf. A. H. Post, *Grundriss der ethnolog. Jurisprudenz*, Oldenburg, 1894–95, ii. 562). The remainder of vol. ii. contains a brief treatise on 'The Law of Services of Hostage-sureties.' Hostage-sureties played a large part in the social life both of Ireland and of Wales. This treatise is followed by 'The Law of Fosterage,' which deals with an institution which held a prominent place in Irish and Welsh life (see CHILDREN [Celtic], FOSTERAGE). Land tenure, too, receives its share of attention in this volume, and we have first the 'Law of Free (or *Sáer*) tenure,' and then the *Cáin Aigillne*, or 'Law of *Dáer*-stock tenure,' *i.e.* the less honourable tenure by *giallna-* (or pledge-) security. This section also contains an interesting account of the Irish law of contract. The remainder of vol. ii. deals with the '*Cáin*-law of social connexions.'

The social connexions here meant are, according to the text of this treatise, those of 'the chief with his *aigillne*-tenants; the Church with her tenants of ecclesiastical lands; the father with his daughter; a daughter with her brother; a son with his mother; a foster-son with his foster-mother; a tutor with his pupil; a man with a woman.'

This part of the *Senchus Mór* is of interest as containing an account of the conditions of marriage among the ancient Irish. Vol. iii. contains a valuable introduction on the general principles of Irish jurisprudence, and completes the *Senchus Mór* with a treatise called *Córus Bescna*, or 'The Customary Law.' This treatise also deals with contracts, and lays stress on the importance of keeping oral contracts. These discussions of contract show the advance which the Irish had made on the way described by Maine as from 'status to contract.' We have here a discussion of a wide range of topics, including the regulation of banquets, gifts to the Church, and the like. Throughout the *Senchus Mór* the Church is treated with the highest respect. The next treatise in vol. iii. is the 'Book of Aicill,' said to have been so named after Aicill near Tara, and attributed to Cormac, the author of the well-known glossary. It deals very largely with what we should now call criminal law, and it is interesting to note that one of its dicta is 'Fines are doubled by malice aforethought.' In this treatise the commentary is remarkably long as compared with the text. Other dicta are:

'Every judge is punishable for his neglect'; 'every king is entitled to compensation for injury to his road'; 'what is cast ashore is the property of the owner of the shore'; 'thou shalt not kill a captive, unless he be thine.'

Numerous topics are touched upon, and the wrongs and injuries discussed are not confined to crimes, while one of its most interesting features is the discussion of responsibility. Vol. iv. contains first a treatise entitled 'Of taking Legal Possession,' and treats of the symbolic ceremonial that was necessary in Ireland (as in other ancient countries) for the institution of an action for the recovery of land. One part of the treatise is called 'The Beginning of Customary Law,' and deals with matters other than the main topic of the treatise. The treatise which follows is called 'Judgments of Co-tenancy,' and discusses important problems arising from this aspect of Irish life. It deals with the partition of lands, fences, trespasses by cattle, bees, hens, or dogs, and gives rules as to the relations between landlord and tenant. Herein we see clearly the growth in Ireland of the individual ownership of land. This treatise even considers the trespasses of pet herons and pet hens, pet deer and pet wolves, pet old birds and pet foxes. Another treatise which throws light on older conditions of life is that called *Bech bretha*, or 'Bee-judgments,' which deals with various contingencies arising from the keeping of bees, a very important phase of country life at the time when mead was drunk and sugar was unknown. The next treatise, *Coibnius Uisci*, or 'The Right of Water,' deals, among other subjects, with the right to construct water-courses and mills. The next treatise, called *Maighne* ('Precincts'), deals with such topics as the violation of precincts, the position of fugitives, and the like. In this document is to be found a very interesting account of sanctuary among the Irish. The treatises which follow are, 'Of the Judgment of every Crime,' 'Division of Land' (a mere fragment), 'Of the Divisions of the Tribe of a Territory' (containing a valuable account of the Irish tribal system), and the document called *Crith Gabhlach*, giving mainly an account of the rights and emoluments of the higher classes of Ireland. This treatise, however, frequently describes an ideal rather than an actual state of things. To this treatise is appended a sequel to *Crith Gabhlach*, and also a fragment on 'Succession.' The treatises given in vol. v. are of a miscellaneous character. The first and second are called respectively 'Small Primer' and 'Heptads,' and they were evidently intended as manuals to be used in the law-schools of Ireland. The former shows some trace of the

influence of the Civil Law, and of an attempt on the part of the writer to show his familiarity with Latin. The substance of the work, however, deals with Irish custom, notably in connexion with the *Sáer*- and *Dáer*-grades, and gives a summary of the Irish legal system. The Heptads arrange the different legal maxims in groups of seven, as may be seen from the following example:

'There are with the *Féini* (*i.e.* the free Irishmen) seven reboundings that shed blood, which incur not debts nor sick-maintenance: the rebounding of a chip from the chipping of firewood or of carpentry; the rebounding of a piece from a flesh fork; the rebounding of a branch backwards; the rebounding of a flail from the ground; the rebounding from horses' shoes; the rebounding in a forge; the rebounding of a stone off another.'

Then follows a treatise called 'Judgments on Pledge-Interests,' in which the various pledges given by men and women are dealt with in detail. The next treatise, 'On the Confirmation of Right and Law,' consists in its earlier part of triads on various topics, while the latter part is of a miscellaneous character. This series of legal documents ends with a brief tract called 'On the Removal of Covenants,' which deals with the rights of property.

3. **The law-books of Wales.**—The law-books of Wales are not legal treatises like those of Ireland, but consist of a code attributed to Hywel Dda (Howel the Good), a Welsh prince of the 9th cent., together with one or two amendments attributed to other princes, and a series of mediæval legal maxims. The code in question is found in Latin and in Welsh MSS, and the Welsh MSS fall into three main groups called *Venedotian* (that of N.W. Wales), *Dimetian* (that of S.W. Wales), and *Gwentian* (that of S.E. Wales) respectively. The propriety of the term 'Gwentian' has been disputed, and some at any rate of the MSS of this group may belong to Powys (East Central Wales). Howel ruled over a large part of Wales, and was in touch with the English Court, and it is not improbable that he signalized his reign by means of a code after the manner of other kings of his epoch. Tradition, as embodied in the introduction to the Dimetian code, regards Whitland, in Carmarthenshire, called in Welsh *Y Ty Gwyn ar Daf* ('The White House on the Tâf'), as the place where the code was drawn up at an assembly consisting of the leading men in Church and State, the bishops being present in order to prevent any collision with the law of the Church. A perusal of the laws themselves, however, brings to view much that is not Christian and that must have been derived from pre-Christian usage in Wales, and, ethnologically, this pre-Christian matter is of great value. Still, to distinguish ancient tribal usage from positive enactment in the Welsh laws is no easy task. The oldest known copy of the Welsh Laws is in Latin, and dates from the last quarter of the 12th century. The next MS in point of age is a Welsh one, giving the Venedotian version of the code, which bears the name *Llyfr Du'r Weun* ('The Black Book of Chirk'), now in the National Library of Wales, Aberystwyth. This MS was written about A.D. 1200 and was probably copied from a pre-Norman archetype. The oldest MS of the Dimetian version of the code was written about A.D. 1282, and there are in existence several other MSS of Howel's Laws. These Laws deal with various topics, such as the royal household and the officers of the king and queen, the ætheling or heir apparent, the king's majesty, the king as the fountain of justice, criminal law, with fines, accomplices, blood-feud, and life-price, together with the Welsh penal system; the law of property and succession, touching upon inheritance to personal property, succession by testament, and the succession of women; the execution of justice and the surety-system. Further, there are important laws relating to women, to trespass, to the values of animals, tame and wild, and of buildings, trees, utensils, etc. The Welsh Laws show clearly the advance of a territorial system represented by the *arglwydd* (lord), as the king's viceroy in each district, as compared with the earlier tribal system, wherein the *pencenedl* (chief of the tribe) was supreme in each tribe. In addition to the mediæval legal triads, which are given in the MSS, there are published in the *Myvyrian Archaiology* certain triads called the 'Triads of Dyfnwal Moelmud' (an imaginary Welsh lawgiver), which were first brought to view (and probably invented) by a certain Tomas ab Ifan of Glamorgan in 1685. In the Laws of Howel reference is sometimes made in a conventional way to the 'Law of Howel,' as evidence for a given legal doctrine; but, in spite of the unhistorical character of these references, the very prominence of the royal court in the code makes it highly probable that it had a royal origin. The two Welsh princes whose amendments of the law are quoted, in addition to Howel, are Bleddyn ab Cynfyn (1063–75) and Rhys ab Gruffudd (1155–97). The Welsh Laws in their several versions, like those of Ireland, deserve close study, especially in connexion with the history of the gradual advance in Celtic countries from a tribal to a territorial system, and the consequent legal evolution.

E. ANWYL.

LAW (Chinese).—The first mention of Chinese law in the classics is the institution of the Five Punishments by Emperor Yao twenty-four centuries before the Christian era. In the next reign, that of Shun, the Five Punishments could be commuted into transportation and deportation, and even, if there were extenuating circumstances, into fines. Mistake and misadventure were pardoned, while aggravated crime and recidivism found no mercy. In cases of doubt, the accused was given the benefit of the doubt. These institutions and principles, couched in quaint language, are to be found in the *Shu King* ('Book of Records'), the oldest book extant in Chinese literature. Embodying, as they do, some of the principles underlying the most enlightened of modern legal systems, they testify to the progress already achieved by Chinese jurisprudence at that remote period. Mercifulness in administration and brevity in legislation were the aims which ancient Chinese statesmen and jurists always had in view.

Codification was attempted about the time of Confucius, the laws being inscribed in bamboo or in metal, reminding one of the nearly contemporaneous Twelve Tables of that other legal system which, after moulding Western jurisprudence, is destined to influence profoundly the Chinese also. Unfortunately, practically nothing is now known of those early codes. During the period of the 'Warring States' (7th cent. B.C.), a code was compiled by Li Kwei which remains the basis of Chinese jurisprudence. The laws of Ts'in (249–210 B.C.) were severe and complex, and were one of the causes of the early downfall of the dynasty. When Liu Pang, the founder of the

Han dynasty, captured the Ts'in capital, he abolished all the harsh laws and substituted for them the famous Three Articles, undoubtedly the shortest and simplest code in history, punishing murder, wounding, and robbery. Of course, this abbreviated code could not serve the needs of the Empire, and another code was enacted later, based mainly on that of Li Kwei, with the addition of three books. Hereafter each dynasty had its code or codes, until we come to the late Tsing dynasty with its *Ta Tsing Lu Li*, which, founded on those of the previous dynasties, in particular that of the Mings, was published in 1647, three years after the Manchu dynasty was established in China. This body of laws, together with the subsequent amendments, held sway until the latter days of the dynasty, when, under pressure of circumstances and influenced by Western ideas, the Emperor established a bureau for the revision of laws, which had among its members many who had knowledge of Western laws, particularly Japanese law. It had also Japanese advisers who exercised considerable influence. It drafted several codes—criminal law, civil law, criminal procedure, and civil procedure, besides other laws, some of which have been enacted, including a temporary criminal code which takes the place of the *Ta Tsing Lu Li* and is still actually in force under the Republic. While the draftsmen of the new laws displayed considerable knowledge of comparative law, Japanese ideas were, naturally, predominant. The Japanese modelled their legal system upon that of the Germans, who in turn inherited from the Romans. Thus the two systems of law, which were each inscribed in bronze at about the same time, are, after the lapse of nearly thirty centuries and through the intermediary of more than one nation, finally brought together.

As the laws of China are at present in a transitional state, and will in future be largely influenced by exotic notions, to get some idea of them in their greatest purity one should go back to the discarded *Ta Tsing Lu Li*. It is well arranged under seven heads: the first may be described as the 'general' part, and the remaining six are named after the former six ministries of the government—civil, fiscal, ritual, military, criminal, and public works. The language is clear and concise, comparing favourably with the productions of modern Western legislation. It has been said that China has only criminal law, and that the *Ta Tsing Lu Li* is only a penal code, what in foreign countries would be civil law being left to local and trade customs and usages. In a sense this is true, because everything in the code is punishable as a crime, but there are many things in it which would be described in other countries as civil law.

(1) The first part deals with general definitions and principles, in some cases with great minuteness and precision. There are also descriptions of the Five Punishments (different from and lighter than the Five Punishments of the ancients), definitions of the ten heinous crimes, statement of the eight privileges, lists of crimes which are not pardonable by a general amnesty, etc. (2) The civil part deals with the conduct of officials, and corresponds to a certain extent with the *droit administratif* of the continental countries of Europe. (3) The fiscal part contains largely what would be civil law. Among its topics are registration of census, real property, marriage, public granaries and treasuries, smuggling, usury, treasure-trove, and weights and measures. The family law is strikingly like that of the Romans, though rather after it had been tempered by Prætorian edicts and Imperial constitutions than at the time of its primitive severity. The notion of what constitutes a family is similar in both laws. Agnatic relationship is more important than cognatic; hence 'Mulier est finis familiae' is to a certain extent applicable to China. *Patria potestas* there is, but the power of life and death possessed by the Roman *paterfamilias* is lacking. It is also tempered by paternal love and filial piety, for which the Chinese are justly noted. Marriage is an all-important institution for the continuation of the family. Divorce is regulated by the code, though rarely carried into practice. If polygamy, or rather polygyny, means marriage with more than one wife at the same time, then Chinese law does not permit it; in fact, the code punishes bigamy. One and only one wife is permitted. However, as Mencius teaches, 'there are three things which are unfilial, and to have no posterity is the greatest of them'; to ensure against this calamity it is permitted to have concubines, who are in no sense wives. They are frequently chosen by the wife, and occupy a subordinate position, while their children are considered the children of the wife. (4) The ritual part deals with sacrificial, court, and official rites and ceremonies. (5) The military part is not altogether a code of military law, since it contains, *inter alia*, provisions for the guarding of palaces, guarding of passes and fords, keeping of official cattle, injuries inflicted by animals to person and property (cattle 'damage feasant'), and carrying of dispatches by couriers. The articles more particularly applicable to the army provide for mobilization of troops, divulging military secrets, substitution of recruits, lack of discipline, etc. (6) The criminal part is the criminal code *par excellence*. The aphorism 'Actus non facit reum nisi mens sit rea' is religiously observed throughout the articles: a man is not punished for a criminal act unless his intent be also criminal. In homicide, *e.g.*, no fewer than six different degrees are distinguished, varying from culpable to excusable. Most of the crimes found in Western law are also in the code. The use of abusive language is a crime; likewise adultery, which, though in England only a cause for divorce and action for damages, is a crime in France, Germany, and other European countries, as well as in some of the States of the American Union. Gambling is another offence; and so is causing a fire in one's house, which is culpable because of the element of carelessness and the dangerous consequences to the neighbourhood. (7) The part relating to public works deals with such subjects as the maintenance and repair of granaries, dikes, and bridges, and encroachment on public highways.

From this hasty survey of Chinese law, one characteristic may be noted—a characteristic which can be observed not only in law, but in the whole fabric of government itself. Writers on and admirers of English law and institutions have noted a distinguishing feature which they call the rule or supremacy of law. The characteristic of Chinese law is what may by analogy be called the rule of morality. Confucius says:

> 'If the people be led by law, and uniformity sought to be given them by punishments, they will try to avoid the punishment, but have no sense of shame. If they be led by virtue, and uniformity sought to be given them by the rules of propriety, they will have the sense of shame, and, moreover, will become good.'[1]

Before and since Confucius, this has been the maxim of Chinese rulers and the first principle of government. Law occupies but a secondary place; morality comes first. Law is intended to reach only where morality is ineffective. In other words, law is supplementary to morality. It may be said that this is true of every civilized society, and that no society can live with only law to guide

[1] *Confucian Analects*, tr. J. Legge, Hong-kong, 1861.

it. But the difference between China and other civilized societies is that in China this is a principle of government, a maxim recognized by law itself. From this arise some curious results. Peculiarities in Chinese law for which foreigners seek an explanation in vain become quite clear once this principle is grasped.

As pointed out above, China has, in one sense, no civil law. There is no civil code governing rights of contracts and of property, a breach or violation of which entitles the aggrieved to an action in court whereby he may claim damages. Nevertheless, in China these things are also governed by rules. Some of these rules are local, customary, or professional. Some of them are to be found in the code, which, however, instead of giving the complainant monetary compensation, punishes the defendant with the ordinary criminal punishments. While the distinction between criminal and civil law, a crime and a tort, is a fruitful source of difference among jurists, seeing that even in Western law many acts are at the same time both a crime and a tort, yet the fact remains that China treats everything under one law and one sanction, the reason being that the legislators have upheld the doctrine of the rule of morality. Western legislators say that a breach of promise of marriage is only an infringement of a private right, giving rise to an action for damages, whereas bigamy is so serious that it is considered something more than that; it is a matter which concerns the community at large, and should be punished as a crime. The Chinese lawgiver, on the other hand, not only punishes bigamy, but also punishes the father who has broken his promise to give his daughter in marriage (the nearest Chinese equivalent to a breach of promise of marriage in a Western sense). He considers that the father has broken the moral code, and therefore deserves punishment as a criminal. Chinese officials and judges encourage arbitration and private settlement in every way; but, when the parties refer their differences to the court, unless there has been *bona fide* mistake, the man who breaks a promise is as much a criminal as a murderer, though, of course, the penalty and the consequences are very different. To those who disagree with the Chinese view, and in view of the impending radical changes to be made in Chinese law in this respect, it will be interesting to quote the words of T. E. Holland:

'The far-reaching consequences of acts become more and more visible with the advance of civilisation, and the State tends more and more to recognise as offences against the community acts which it formerly only saw to be injuries to individuals.'[1]

There is in Chinese law the doctrine of vicarious responsibility. When a particularly heinous offence is committed—*e.g.*, high treason—not only is the criminal punished, but relatives up to a certain degree are also punished. While doubtless deterrence is the principal motive for this provision, as it is not otherwise easy in such a large country and with inadequate police supervision to prevent the commission of crime, yet, in theory at least, these relatives are responsible because they have not exercised a moral and benign influence on the culprit—an influence which the law presumes they are, on account of their relationship and intimacy, in a position to exercise. Similarly, when parricide has been committed—a crime particularly egregious in the eyes of the filial Chinese—the officials of the jurisdiction, from the district magistrate up to the Governor and Viceroy, all receive more or less punishment. The theory is the same; these officials have charge, among other things, of the morality of the people within their jurisdiction; and, when such a horrible crime as the murder of a person's parents is permitted to come to pass, there has been a breach of duty on the part of the officials. In no other way can the doctrine of vicarious responsibility in Chinese law be explained than by the principle of the rule of morality. Considerations of policy doubtless have their influence, but in theory and origin it is because the Chinese government is essentially a government by morality.

As already stated, the code is no longer in force, and another penal code has taken its place. Drafts of other codes and laws were in course of preparation even before the fall of the Manchus. The legal revolution preceded the political revolution. In the admiration for Western laws, there is danger of a slavish imitation without ascertaining whether the new tree is suited to this ancient soil. This danger is particularly evident in the law of persons. As J. Bryce has pointed out,[1] the law of persons in all countries is the most difficult and the last to change, since it touches most nearly the question of status, the family relations, the very foundation of the social structure of the community. The drafts prepared in the last days of the Manchus are to be submitted to another body of select men for consideration. It is, therefore, premature and unprofitable to prophesy as to the future. That Japanese, and hence German, influence will largely be felt there is no doubt. Anglo-Saxon legal principles also have admirers, so that they too will probably be adopted to a certain extent. But Chinese law and custom should form the foundation of the new structure, so that the Chinese law of the future may still be an institution which is the product of the genius of the people, and that, while useful and suitable principles may be borrowed from the West, there may be no apish imitation of others; that, in a word, the law may still be Chinese law.

George Thomas Staunton, London, 1810 (unfortunately now out of print); S. Wells Williams, *The Middle Kingdom*, new ed., New York, 1883; T. R. Jernigan, *China in Law and Commerce*, London, 1905.

CHAO-CHU WU.

LAW (Christian, Western).—I. *INTRODUCTION.*—There are, first of all, certain distinctions to be made. The first distinction is between *ius* and *lex*. *Lex* (*loi*, *Gesetz*, *νόμος*) is a precept[2] made by right authority, which the subject of that authority is morally bound to obey. This is our 'law' in one sense. *Ius* (*droit*, *Recht*, *δίκη* or *δίκαιον*) may be understood either subjectively or objectively. Subjectively, it is defined as 'the moral power of doing, omitting, or demanding anything, so that another be obliged to do or omit something.' It includes much of what we call 'right' or 'authority.' 'Ius habeo' may be rendered 'I have the right.' Objectively, in the sense in which it is studied by jurists, it is 'the complex of norms by which the actions of individual members of a society are regulated in regard to other members or to the whole society, so that the society may be preserved and may attain its end.' The English word 'law' is used in this sense too; thus we speak of State law, Church law, and canon law, as distinct from a particular law (*lex*). Starting from the idea that all *ius* comes ultimately from the will of God, canonists distinguish the following kinds. *Ius naturale* is the eternal law of God, imprinted in our conscience by Him naturally, so that all men know, or may know, what is essentially right or wrong, by the light of their own conscience. This is the sense in which St. Paul says the Gentiles, who have not the Law (*sc.* of Moses), do by nature the things of the law (the natural law of God; Ro

[1] *Jurisprudence*[10], London, 1906, p. 320

[1] *Studies in History and Jurisprudence*, Oxford, 1901.

[2] We may prescind here from the difference between a public *lex* and a private *præceptum*.

2[14]). This natural law is promulgated by God in making human nature. No power can abrogate it or dispense from it. Different from this is *ius positiuum*, that is, law made by a legislator about things not in themselves necessary, which become necessary as the result of his legislation. Things forbidden by natural law are 'prohibita quia mala'; those forbidden by positive law are 'mala quia prohibita.'

Positive law may be divine or human. Divine positive law is that promulgated by God Himself, as the Law of Moses, or laws made by Christ in the NT. This is not the same as natural law. Many commands of the old Jewish Law are about things in themselves indifferent. It differs also in binding only the subjects to whom it is given (as does all positive law), whereas natural law binds all men. No man can abrogate or dispense from divine positive law. Human positive law is that promulgated by a human authority. Indirectly this too comes from God (or it would not be binding law at all), but only in the sense that God has delegated authority to him who makes it. Positive human law can be abrogated, modified, or dispensed by the authority that laid it down. It is divided into civil law and ecclesiastical law. The *ius ecclesiasticum* is called also by other names. It is *ius sacrum*, as opposed to *ius profanum* (civil law); in old days it was often called *ius pontificium*, as opposed to the civil *ius cæsareum*; and, opposed to *ius ciuile*, it is not infrequently called *ius canonicum*, though there is a more accurate sense in which *ius canonicum* is a part of ecclesiastical law. Another distinction which crosses this, and so may lead to confusion, is between *ius diuinum*, in the sense of all Church law, whether promulgated immediately by Christ or by the authority of the Church, and *ius humanum*, meaning all secular law. This distinction is better avoided. The distinctions of ecclesiastical law are *ius generale* and *ius speciale*. *Ius generale* is a law which applies to all cases in which the circumstances for which it provides are found; *ius speciale* is a law made for a particular case, which does not apply to another case, even if the circumstances are the same. From Roman civil law the Church has taken the distinction between *ius commune* and *ius singulare*. *Ius commune* is that which flows from general principles and so applies normally to all subjects; *ius singulare* is law made for a particular class of persons. This distinction has much in common with that of *ius generale* and *ius speciale*, but is not quite the same. From the point of view of the legislating authority we distinguish *ius uniuersale* and *ius particulare*. Universal law is that which is made by the universal authority of the whole Church; particular law is made by limited authority, as by a bishop for his own diocese. So we have the principle that *ius particulare* may enforce and add to the universal law, but may never contradict it. Lastly comes the much discussed distinction between *ius publicum* and *ius priuatum*. This regards the matter of the law. *Ius publicum* contains laws for the whole Church and for its public authorities; *ius priuatum* is concerned with the rights and duties of private members of the Church. Several modern canonists of the German school (*e.g.*, Phillips) reject this distinction as absurd. It is defended by most others (cf. C. Tarquini, *Iuris eccl. publici institutiones*, Rome, 1896, p. 1 f.). *Ius publicum* is either *externum*, if it regards the relation of the Church to other societies (*e.g.*, the State), or *internum*, if it regards the internal affairs of the Church.

'Canon' is the Greek *κανών*, a rule or measure. Already in the 4th cent. Church synods began to call the rules laid down by them canons (so the Synod of Ancyra in A.D. 314, the Nicene Synod in 325, etc.). From this time 'canon' begins to be used exclusively in the sense of an ecclesiastical law laid down by public Church authority. It is contrasted with civil law, which is *lex* (*νόμος*). Gratian defines the word in this sense:

'Ecclesiastica constitutio canonis nomine censetur' (ad D. 3, § 1); 'porro canonum alii sunt decreta pontificum, alii statuta conciliorum' (*ib.* ad c. 2).

Since about the 8th cent. collections of such canons were made under the titles *Liber canonum*, *Corpus canonum*, etc. So arose the term *ius canonicum*, the law made by canons, in this sense. But, since the typical collection of canons, the *Corpus iuris canonici*, was closed in 1317, it has been common to use the term *ius canonicum* only for what is contained therein and in the 'Extrauagantes' which form its supplement (to the 15th cent.). In this sense it does not cover later Church law; on the other hand, it includes much contained in the *Corpus iuris canonici* which is really civil law.

Although so far these definitions are taken from Western canonists, and so represent Roman Catholic principles, they are general ones, which are accepted on all sides. We shall here describe Roman Catholic canon law; for that of the Eastern Churches see the following article.

II. *ROMAN CATHOLIC CANON LAW.*—1. **Written and unwritten law.**—Roman Catholic canon law distinguishes first between two sources of law, *ius scriptum* and *ius non scriptum*. The *ius scriptum* consists of laws which are formally laid down by authority in an authentic document; *ius non scriptum* is the law which arises from practical application on the part of the community, without any such formal promulgation. It does not cease to be *ius non scriptum* when it is written down, but only when it is promulgated anew by authority under the conditions which make a written law.

(*a*) The *fontes iuris canonici scripti* are: (1) The NT. The OT is not considered a source of Christian law at all, but at most an *adminiculum*. The positive old Law was abolished by the preaching of the gospel, and its moral precepts are contained in natural law. So the OT, as such, does not occur as a *fons iuris* at all. On the other hand, the NT and the laws therein contained constitute the foundation of Church positive law. From the NT we have three principles—the power of legislation given by Christ to His Church, the constitution of the Church as an organism with a hierarchy, and the social character of Christianity, from which we conclude that the Church is a perfect society, having the rights of such. These are the foundation of all positive Church law. (2) The decrees of synods. Before the Council of Trent decrees about faith were called dogmas, and those about positive law were called canons. The Council of Trent changed these terms, calling its decrees about faith *canones*, and its disciplinary laws *decreta*. The Vatican Council followed this new terminology. Only the decrees of ecumenical councils have force for all Catholics; those of particular councils oblige only those for whom they are promulgated, over whom the council has jurisdiction. But many decrees of particular synods have since become universal by virtue of a new promulgation of universal authority extending them. Disciplinary decrees of ecumenical councils oblige until they are repealed by universal authority. The Church has the power of abrogating or modifying her own positive laws. (3) Constitutions of popes. The pope, by virtue of his universal jurisdiction, has the power of making laws for the whole Church. He does this in two forms—in a more solemn form by bulls (*bullæ*) and less solemnly by briefs (*breues*). There is no difference in the binding force of bulls and briefs; the greater or less solemnity concerns only the im-

portance of the matter. Bulls are regularly issued from the papal Chancellery; before Leo XIII. they were written in Gothic characters and had attached a leaden seal tied to the parchment by silk threads. Leo XIII., in 1878, ordered that in future bulls should be written in Roman letters and sealed with a red seal representing St. Peter and St. Paul and bearing the name of the pope. Only in bulls of special importance is the old leaden seal to be retained. Bulls always begin with the name of the pope and the title 'Seruus Seruorum Dei' only; briefs begin with a fuller title and are sealed in red with the seal of the Fisherman. They are prepared at the Secretariate of Briefs. The use of bulls or briefs is not easy to account for. Frequently matters of great importance are determined not by bulls but by briefs (see, further, art. BULLS AND BRIEFS). According to the matter and the force of obligation, papal constitutions are variously distinguished. General laws for the whole Church are called by the generic name *constitutiones*, and *decreta* are those which are issued 'motu proprio'; *literæ decretales* generally come from a consultation and are answers to questions. Encyclicals are addressed to the bishops of the whole Church or to those of some province. With regard to the extension of their binding force, we distinguish between *constitutiones generales* for all and *rescripta* for special cases, to which alone normally they apply. All Roman Catholics are bound by general constitutions, and also by *epistolæ decretales* if they are expressly extended to all. Otherwise, they do not constitute a general law, from defect of promulgation. Immediately they bind only those to whom they are addressed. But to others they have the force of authentic interpretations of law, and are often published with the purpose of constituting a precedent. Rescripts have no legal force except for those to whom they are addressed. Rescripts may be *iustitiæ*, containing an obligation, or *gratiæ*, conferring a favour, or *mixtæ*.

So far we have considered the *fontes iuris generalis*. *Ius particulare* is made by the decrees of provincial councils, diocesan laws, or statutes of corporations, such as chapters for their own body. It is obvious that a particular authority can bind only those who are subject to it. Many civil laws are included as particular canon law; not that the Church recognizes the right of a civic authority to legislate in ecclesiastical matters, but either because they are the civil sanction of already existing Church laws or because Church authority has given them the force of canon law. Connected with civil law are concordats. These began in the Middle Ages, *e.g.*, the 'Concordatum Calixtinum' of 1122, between Pope Calixtus II. and the Emperor Henry V., which put an end to the dispute about investitures (see art. INVESTITURE CONTROVERSY). A concordat is defined as 'a treaty between Ecclesiastical and Civil authorities, by which the connexion between both societies concerning mixed affairs is regulated.'[1] According to modern principles, only the pope makes the concordat on the side of the Church. For the State its governing authority acts. The matters treated in concordats are all the 'mixed' questions in which both Church and State have an interest, such as questions of property, marriage, presentations to benefices, and so on. Concordats are now generally said by Roman Catholic canonists to be true bilateral contracts, which oblige both sides in justice, being binding on the subjects of both powers as particular Church law and civil law (see, further, art. CONCORDAT).

(*b*) The *fontes iuris canonici non scripti* are: (1) Natural law as the origin of all positive law. The basis of positive law is the principles of natural law; nor can positive authority make any law which contradicts that of nature. (2) Tradition, which affects principles of discipline as well as those of faith. So we distinguish divine, apostolic, and ecclesiastical traditions in matters which bind conduct. (3) Custom (*consuetudo*). This plays a great part in Catholic canon law. It is defined as: 'A law introduced by the repetition of similar actions on the part of the community, with the consent of the legislator.'[1] The difference between *consuetudo* and *traditio* is that in the case of a law coming through tradition it is presumed that it was originally formally promulgated by authority, although knowledge of that promulgation is to be had only through tradition. In the case of custom there is no promulgation at the beginning; the law gradually acquires its force through repeated acts. Custom is, in fact, the same principle as prescription, except that prescription usually connotes a right, and *consuetudo* a duty. It may be universal for the whole Church, special in the case of a particular though perfect society in its own order (as a chapter or religious order), or *specialissima*, if it affects an imperfect society, such as a family or parish.

Custom may be according to law, in which case it only makes the force of the law more clear, and perhaps interprets it (hence the proverb, 'Consuetudo est optima legum interpres'); or it may be beside the law ('præter legem'), adding to, but not contradicting, the *lex scripta*; or it may be against the law ('contra legem'), which abrogates or abolishes a law. This is the most important case. It is called *desuetudo* when custom simply abolishes a law by continual non-observance, *consuetudo contraria* when by repeated acts a new law is introduced which abrogates a former one.

There are many precautions in canon law against the too easy admittance of custom. First, it must be introduced by a perfect community, *i.e.*, by one which has the power of making or receiving a true law, as distinct from a particular precept. Hence one man can never obtain a right for himself by repeated acts. The custom must be introduced by repeated, free, and public acts on the part of the greater part of the community. Most canonists require that these acts should not be made through an erroneous opinion (*e.g.*, ignorance that the law exists); they must certainly be free, in the sense of not being made through force or fear. Nor is a new law introduced by custom when the people who practise the custom do so with the deliberate consciousness that they are merely performing a free work of piety. There must be, at least eventually, some signs of an intention (not necessarily explicit) to prescribe a custom 'præter legem.' The object of a *consuetudo* may be anything which is not opposed to natural law, or opposed to right reason, or an immediate occasion of sin, or injurious in itself to the whole system of Church discipline. The only general and certain principle that can be laid down with regard to the time required for a custom to obtain the force of law is that there must be a sufficiently repeated number of acts, extending over a sufficient time, for a reasonable person to be able to say that the custom is already in firm possession. Generally canonists apply to *consuetudo* the same principles as are required by civil law for the prescription of a right. For customs 'præter legem' some demand ten years, for customs 'contra legem' forty years. Others think ten years sufficient in this case too, at least when it is a case of law which has never been observed by the community, against which custom began as soon as the law was pro-

[1] Aichner, *op. cit.* p. 31.

mulgated. The last condition for a *consuetudo*, and the most important, is the consent of the legislator. This really does away with all that otherwise would be anomalous in the principle of *consuetudo*, and makes it consistent with the normal principles of canon law. For in this case also the rule obtains that ultimately the only source of law is the act of the legislator in some form. The consent of the legislator may be expressed, or tacit, or merely legal, when he is ignorant of the custom, but intends in general to apply always the canonical principles affecting custom. In such a case he has an implicit intention with regard to each particular custom, even if he does not know of it. In this case, too, the real source of the obligation of the *consuetudo* is the will of the legislator. When the legislator knows of the custom and could put a stop to it but does not do so, we have a case of tacit consent. Custom may be abolished by abrogation, which simply puts an end to the one which now exists, but in no way prevents a new custom of the same kind from arising; or by prohibition, which not only ends the custom but forbids a new one to arise; and, finally, by reprobation, which declares the custom to be in itself pernicious and incapable of ever obtaining the force of law. But the formulas which are often appended to positive laws (such as 'non obstante quacumque consuetudine') do not always mean as much as they would seem to mean. Often such formulas are intended only to make the beginning of a *consuetudo contraria* more difficult. A new positive law is always supposed to abrogate general customs contrary to it, but not local customs, unless a clause to this effect is added. A custom may be abolished by a new custom opposed to it, or by simple *desuetudo*.

Other *fontes iuris canonici non scripti* are enumerated in the text-books. There are the opinions of learned canonists. These are not strictly a source of law; but the *responsa prudentum*, as in Roman civil law, so also in canon law, are considered a safe guide as to the meaning of laws whose form is ambiguous; they furnish a precedent according to which authentic declarations are made; as in moral theology, the consent of a number of canonists of repute constitutes a probability which may be followed safely. In much the same way the Fathers of the Church, though each one has no more authority than the reason he gives, form a witness of tradition which is often of great importance. Moreover, many sayings and decisions of Fathers have afterwards been incorporated into authentic collections of laws, and from this incorporation receive the force of law in the strict sense. In matters concerning which there is yet no positive law, it is probable that the judgment of illustrious Fathers will be considered when a law is framed. Many early text-books of canon law include answers of Fathers and their sentences in test cases. The *usus forensis* also occurs in connexion with *ius non scriptum*. Thus a repeated number of decisions in special cases, which all show agreement with the same general principle, form a precedent which may be of great importance for general law. Here it is probable that, if a new law be drawn up, it will be in accordance with the precedent set by the *usus forensis*. Meanwhile this use gives a greater or less probability as to the correct interpretation of laws. Among the Roman tribunals which make the *usus forensis* the Rota Romana is of chief importance. Formerly disputed cases from all parts of the world were sent to the Rota for judgment. Its jurisdiction is now limited by that of other tribunals; but it still remains the most important one.

The *stylus curiæ* also occurs among the *fontes non scripti*. This means the use of certain conventional or technical terms and methods of procedure, which the student of canon law should understand, since they affect the meaning of the decisions.

2. History of the sources of canon law.—Canonists distinguish three main periods of canon law—the *ius antiquum* from the foundation of the Church to the publication of Gratian's *Decretum*, *ius nouum* from Gratian to the Council of Trent, and *ius nouissimum* from the Council of Trent to our own time.

(1) *Ius antiquum.*—After the NT there is but little canon law extant down to the Council of Nicæa (325). The modern canonist in practice does not refer much to this time, but in theory the same rules apply to it as to later times. A law made during the first three centuries by proper authority binds the subjects of that authority till it be repealed or fall into desuetude. But there are hardly any such documents now extant. There are a few papal letters, letters of other bishops, such as St. Cyprian, and the decrees of one or two councils, such as the two held at Carthage in 256. Moreover, since later legislation has covered almost the whole field of possible Church law, it is unlikely that any law of the first three centuries would be cited. It will have been either re-enacted or abrogated at a later period. After the Council of Nicæa we have a large collection of canons, chiefly pseudo-apostolic, such as the *Canons of Hippolytus*, the various Church Orders, etc. The most important of these are the so-called *Apostolic Constitutions* and *Canons*. When it was believed that these were the work of the apostles, naturally they seemed of enormous importance. The Quinisextum Synod ('in Trullo,' at Constantinople, 692) recognized the 85 *Apostolic Canons* as an authentic source of canon law, whereas in the West a Roman synod under Pope Gelasius I. rejected them as spurious as early as 495. Eventually fifty of these canons, by their reception in the *Corpus iuris*, obtained a certain recognition, though not technically authority, in the West. Now that every one knows that they are spurious, they have only an archæological interest. Some of them, however, are really repetitions of authentic canons of Nicæa and the Synod of Antioch in 341. From the Council of Nicæa (325) there are decrees of ecumenical synods, which have the full force of law for the whole Church, and those of particular synods, which are authentic sources for the provinces concerned. The other source of the *ius antiquum* consists of papal letters and decrees. There are *literæ synodicæ* (treating chiefly of matters of faith) and papal decrees in various forms from the time of Damasus I. (366–384). These are collected in *Regesta*, and still have full force, unless they have been repealed by later legislation.

Long before the famous *Decretum Gratiani* attempts had been made to collect and arrange the growing mass of sources of canon law. The first collection of this kind is the so-called *Versio Hispanica*, long supposed to be the work of St. Isidore of Seville. Really it is a Greek collection, to which a Latin translation was added in Italy. Its first edition, composed and translated not long after the 4th cent., contained only the decrees of Nicæa; to these the Latin version added those of Sardica, then supposed in the West to be Nicene. Later the decrees of Ancyra, Neo-Cæsarea, and Gangra were added. Such a collection would naturally constantly be brought up to date, and new canons would be added by copyists. Finally, in Spanish and Gallican texts, the canons of Chalcedon were added. From the 5th to the 9th centuries there are a number of such collections. The so-called *Versio prisca* is an Italian translation of a Greek

collection made in the early 5th century. In Gaul a great but disordered collection of canons of councils, and of papal and episcopal letters, was made in the beginning of the 6th century. This was published by Pasquier Quesnel,[1] who thought it to be the oldest official Roman collection. F. Maassen counts thirteen other early Gallican collections of the kind.[2] In Italy Dionysius Exiguus (536) made two large collections, one of canons and one of decretals (papal letters) down to Anastasius II. (496–498). These were then joined together, and became the official Roman text-book, practically displacing all others. Later canons were added to the collection. Pope Adrian I. in 774 sent a copy of this to Charles the Great (with additions down to his own time). This became the official *Codex Canonum* of the Church of Gaul. It was made State law in Charles's empire in 802. In Africa the chief collections are the *Breuiatio Canonum* of Fulgentius Ferrandus in the first half of the 6th cent., and the *Concordia Canonum* of Crescentius about the year 690. Spain had a number of such collections. In the end of the 6th cent., Martin, Bishop of Braga, made a *Collectio Canonum* (also known as *Liber Capitulorum*). About the same time appeared an *Epitome* from Martin of Braga and other sources; from this further *Epitomes* were made. It was also at the end of the 6th cent. that the great *Hispana Collectio* was composed. The preface of this is taken for the chief part from the *Etymologies* of St. Isidore of Seville († 636). This is the main source of pseudo-Isidore. In the 9th cent. it was increased by a great number of forged decretals and was ascribed by the forger to St. Isidore. Ireland had a collection of canons, chiefly taken from Dionysius, about the end of the 7th century. In the 9th cent. appeared three collections in the Frankish kingdom which consisted largely of forged documents. These are the *Collection of Capitularies* of Benedict Levita, the famous forged *Decretals* (pseudo-Isidore), and the *Capitula Angilramni*. The forged *Decretals* especially had a disastrous effect on later canon law. They contain so great a mass of documents, touching all kinds of matter, that for centuries canonists took their material from them. It is now generally admitted that the forged *Decretals* were compiled between the years 847 and 853, in Gaul. They were probably begun at Mainz and completed at Rheims. The compiler calls himself Isidorus Mercator (in other copies, Isidorus Peccator or Mercatus). Various persons have been suggested as the compiler (Benedict Levita, Rothad of Soissons, etc.). The forgeries consist for the most part in ascribing authentic documents of a later age to an earlier one. In the 15th cent. Cardinal Nicholas of Cusa and John Turrecremata first doubted their authenticity. Since then this has been so established that no one any longer quotes them. Other collections are those of Regino of Prum (c. 906), Burchard of Worms († 1025), Anselm of Lucca († 1086), Cardinal Deusdedit (1086–87), and the *Decretum* and *Pannormia* of Ivo of Chartres († 1117).

(2) *Ius nouum.*—The *ius nouum* begins with the *Decretum* of Gratian, which superseded all earlier ones and became the universally accepted collection of the Middle Ages in the West.

Gratian (Magister Gratianus) was a Benedictine monk at Bologna. He lectured on canon law, and, feeling the need of a text-book, he composed his *Decretum* about the year 1150. He intended this to be not so much a collection of canons as a text-book in which he lays down theses and proves them by quotations. In each case he first states a thesis (these statements are the 'dicta Gratiani,' which come first); then, as proof, he quotes documents, canons of synods, papal decrees, and even civil laws. His idea was also to harmonize apparently discordant canons; hence the name, given either by himself or soon after, *Discordantium canonum concordia*. Gratian's book was, in comparison with all that had gone before it, so well arranged, and contained so much matter, that it soon became the universal text-book in the West. No other canonical work approaches it in importance. Soon it began to be commented. An immediate disciple of Gratian, Paucapalea, made the divisions of the first and third parts as we have them now. He also added notes which have become incorporated into the work, each under the special heading 'Palea' (for Paucapalea); then the notes of other commentators were added with the same heading, so that 'Palea' became a general title for notes at the end of Gratian's 'Distinctiones.' A mass of longer commentaries and glosses gathered around the text. The 'Glossa ordinaria' printed at the foot of modern editions is by Iohannes Teutonicus (Johann Zemeke), Canon of Halberstadt († 1245), and Bartholomew of Brescia († 1258). After the work had passed through innumerable hands and had received all manner of additional notes and corruptions of the text, Pope Pius IV. appointed a special commission of cardinals to revise it. They continued their work under Pius V. These are the 'Correctores Romani' whose corrections are added beneath the text. Finally, Gregory XIII. in 1852 issued an authentic printed edition of the *Decretum*.

It consists of three parts. Part i. (sometimes called 'Tractatus ordinandorum') treats of the sources of canon law and of ecclesiastical persons and offices. It has 101 Distinctiones, each of which begins with a dictum headed 'Gratianus.' This is his thesis. It is then proved by a number of canons. At the end often comes the Palea. Originally these Distinctiones and canons were not numbered, and were quoted by their first words. The edition of Charles Dumoulin (Paris, 1547) is the first to number them. Le Conte (Paris, 1556) numbered the Paleæ also. Part ii. contains solutions of disputed questions. It is divided into 36 Causæ. Each begins with a statement of the case by Gratian, followed by a number of 'Quaestiones,' each having a proposition by Gratian, which is then proved by a number of canons. Among these is one quæstio which amounts to a complete treatise or excursus by itself. This is the third quæstio of Causa xxxiii. It bears the special title 'Tractatus de Poenitentia' and is divided into seven Distinctiones and these again into canons. 'De Poenitentia' is quoted as a separate treatise. Part iii. is headed 'de Consecratione.' It treats of liturgical matters, especially of the Mass. This part has five Distinctiones, each beginning with a 'dictum Gratiani,' which is proved by a series of canons. The second and third parts also have Paleæ.

There is a recognized manner of quoting the *Decretum Gratiani* which should be noted. Since each part is arranged differently, it is not necessary to begin by saying which part one quotes; this is shown by the quotation itself. From the first part we quote by canon and Distinctio (c. and D.); thus 'c. 3, D. xcv.' means the third canon of the ninety-fifth Distinctio of the first part. In quoting the second part three numbers occur, those of the canon, Causa, and quæstio (in that order); *e.g.* 'c. 6, C. vii. q. 4.' The treatise 'de Poenitentia' is known by the addition of those words (or in a shortened form, 'de Poen.,' or even 'D.P.'), then (either before or after this) come the canon and the Distinctio—*e.g.*, 'c. 3, D. 5, D.P.' In quoting the third part the words 'de Consecr.' are always added; otherwise the quotation by canon and Distinctio is the same as in the first part—*e.g.*, 'c. 123, D. iv., de Consecr.'

Gratian's *Decretum* then became the nucleus of the *Corpus iuris canonici*, of which it is still the first (about half in length). To this gradually four other parts were added. Gratian had used canons down to Innocent II.; the latest quoted by him is of 1139. As time went on, and further material accumulated, it became necessary to add to these. Notably the third and fourth Lateran councils (1179 and 1215) added considerably to the material of canon law in the West. During this period, when the papacy reached its greatest power in civil life, a great number of papal decrees were issued. After Gratian about seventeen different compilations of this new material were made, when Pope Gregory IX. thought of publishing an authentic addition to the *Decretum Gratiani*. This was prepared by St. Raymund of Pennafort, the

[1] In the *Opera Leonis Magni*, ii. (Paris, 1675).
[2] *Gesch. der Quellen und der Lit. des can. Rechts*, pp. 821–873.

pope's penitentiary. Gregory published this collection in 1234 by the bull *Rex pacificus*, sent it to the Universities of Paris and Bologna, and ordered that it should be accepted as authentic. This is the *Decretals of Gregory IX.*

The work is divided into five books, treating of the matters described in the verse 'Iudex, iudicium, clerus, connubia, crimen,' namely of ecclesiastical officials and judges, of procedure in canon law, of the rights, duties, and property of clerks, of laws about marriage, of criminal cases and their process. Each book is divided further into 'Tituli,' and these into 'Capitula.' This division already existed in the compilation of Bernard of Pavia (Papiensis), about 1191, which is the basis of that of Gregory IX

The sign by which a quotation from this part of the *Corpus iuris canonici* may be known is the word 'extra' or the letter x, meaning that it is outside the *Decretum Gratiani*. Thus: 'c. 1, x, de clericis non resid. (III. 3)' means the first chapter of the Titulus 3 (which is about clerks who do not reside) of book III., extra, namely, in the *Decretals of Gregory IX.* The addition of the heading of the Titulus is now no longer necessary, since in later editions they are numbered.

The work has been enlarged since it was first published. Raymund, with the idea of maintaining brevity, did not write out the statement of the case, but only the solution. Nor did he quote the whole *Decretal*, but only fragments of it. The result of this was that it was often impossible to understand his text unless one went to the original source. To remedy this Le Conte in his edition (Paris, 1556) added what Raymund had omitted. These additions are the 'partes decisæ,' printed in italics in modern editions. The decretals are arranged in chronological order; in some cases Raymund, when the matter did not seem sufficiently clear, obtained from the pope a special decree made to be inserted here. These are put at the end of the Tituli. There is a 'Glossa ordinaria' made by Bernardus de Bottone of Parma (1263).

The third part of the *Corpus iuris canonici* consists of the *Liber Sextus Decretalium*, added by Boniface VIII. It is the sixth book after the five of Gregory IX. This became necessary in the same way as those of Gregory IX. In 1245 and 1274 the first and second Councils of Lyons had been held. From the decrees of these, of popes since Gregory IX., and of his own, Boniface VIII. in 1298 published his *Liber Sextus*, by the bull *Sacrosanctæ*. In this he expressly forbids any decrees to be accepted as valid except those contained in this collection. John Andreæ made the 'Glossa ordinaria' to this part of the *Corpus*. At the end the pope added 88 'Regulae iuris,' short maxims about procedure. The *Liber Sextus* is divided in the same way as the *Decretals* of Gregory IX. Although the whole is the *Liber Sextus*, it has itself five books, divided into Tituli and chapters. It is quoted as in Gregory IX., except that, instead of x, we write 'in vi.'

The fourth part of the *Corpus iuris canonici* is the *Constitutiones Clementinæ*. In 1314, Clement V. published a collection of his own Constitutions, including those of the Council of Vienne (1311–12); but he died before his work had been received by the Universities of Orleans and Paris, to whom it was addressed. His successor, John XXII., in 1317 sent the collection to the University of Bologna with the bull *Quoniam nulla*, ordering its use by schools of canon law and in courts. Clement meant to call his collection the Seventh Book of Decretals; but, since it contains only his own, not all those which had been issued since Boniface VIII., the commentators refused to give it this title and called it the *Constitutiones Clementinæ*.

It is divided, like the *Decretals* of Gregory IX., into five books, and these into Tituli and chapters. It is quoted in the same way, with the special rubric 'Clem.' instead of 'x.' It has a Glossa by John Andreæ (1326), improved by Francis Zarabella (1417).

These collections, those of Gratian, Gregory IX., Boniface VIII., and Clement V., constitute the *Corpus iuris canonici clausum*, a name which begins with a misunderstanding of a phrase in the acts of the Council of Basel.[1] The *Corpus iuris canonici*, however, received yet two appendices. Decrees made later, and, therefore, not in the *Corpus*, were called 'Extrauagantes,' as being outside the official book. Then they began to be added to copies of the *Corpus* as an appendix. Finally, John Chappuis in his edition (Paris, 1500) printed two such appendices of 'Extrauagantes' which, although collected only by his private authority, are now always added. These are the 20 'Extrauagantes' of Pope John XXII. (1316–34), which had already been edited with a Glossa by Zenzelinus de Cassanis in 1325. They are distributed in 14 Tituli. The other appendix contains 'Extrauagantes communes,' decrees of various popes from Boniface VIII. (1294–1303) to Sixtus IV. (1471–84). Chappuis published seventy of these; later (in 1503) five more were added. These are arranged in five books on the same principle as those of Gregory IX. But the fourth book ('Connubia') is wanting, because there had been no new decrees about marriage. The whole work is considered one *Corpus*, including the 'Extrauagantes.' Matthew of Lyons in 1590 published a so-called 'Liber Septimus' containing constitutions of popes from Sixtus IV. to Sixtus V. (1585–90); and Paul Lancelloti in 1563 wrote a compendium of canon law which he called *Institutiones iuris canonici*. These also, with the approval of Paul V., have been added to the *Corpus* since 1605. They can hardly be considered in any sense part of it, though they are authentic collections which may be used in canonical processes.

This is the end of the *Corpus iuris canonici*. Its historical importance is enormous. For centuries it has been the one official collection of the Roman Catholic Church; it is the most important book of canon law ever published. But, in spite of the reverence with which it is still regarded, it has ceased to have more than a historical interest. There has been far-reaching legislation since, notably by the Councils of Trent and the Vatican. Moreover, the *Corpus* has many errors of various kinds. Gratian's decree, its nucleus, is not on the level of modern erudition. He quotes a number of spurious papal decrees, including many from pseudo-Isidore. It is not likely that any further additions will be made to a work which would need rather complete re-casting. At the Vatican Council one of the Postulata was for a new *Corpus*, to be made by a special commission. Meanwhile the modern canonist refers rather to a modern work.

The *Corpus iuris canonici* has not the same authority throughout. Although it is an official collection, this does not mean that everything in it must be accepted as authentic. The *Decretum Gratiani* has never been made a 'codex legalis' in the strict sense. Therefore it remains, in itself, a private collection, which confers no new force on the decrees which it quotes. Each of these has no more value than it had before Gratian quoted it. His Dicta and the Paleæ have no juridic value. But the *Decretals* of Gregory IX., Boniface VIII., and Clement V. were published as a 'codex legalis.' This means that the publication, apart from their origin, was promulgation of a new law. All that is in them thereby obtained the value of common law, even when the original decree was addressed to some particular person only. But this law is subject to the usual conditions. It may be abrogated, prescribed against, etc., as may all common law. According to the opinion of canonists, the constitutions among the 'Extrauagantes' do not receive any new authority from their insertion here.

[1] The Council speaks of papal reservations 'which are included in the *Corpus*' ('in corpore iuris expresse clausis') (sess. xxiii. 6 [Mansi, xxix., col. 120, E]). From this phrase originated the idea of a 'Corpus iuris canonici clausum,' afterwards adopted in many documents, *e.g.* Benedict XIV. in the const. *Iam fere*, etc.

(3) *Ius nouissimum.*—The *ius nouissimum* begins with the Council of Trent (1545–63). Of the twenty-five sessions of the Council, thirteen made decrees affecting law. These decrees were to have force as soon as they were promulgated. This was done by the bull *Benedictus Deus* of Pius V. in 1564. The pope fixed 1st May of that year as the date from which the decrees should be in force. The question occurs whether it be possible lawfully for a custom to abrogate any Tridentine decree. The possibility of this has often been denied, so that there is an axiom often quoted: 'Contra concilium Tridentinum non ualet consuetudo.' This axiom has no authority behind it. It is true that the Council of Trent has the gravest authority; but there is no reason to suppose an exception to the common principle about *consuetudo* in this case either. In fact, a number of customs have arisen against its decrees in various parts of the Church, which, supposing the usual conditions, are admitted as lawful. In order that there might be a permanent body capable of giving authentic interpretations of the Tridentine decrees, Pius IV. founded the 'Congregatio concilii Tridentini interpres' (commonly called the 'Sacra congregatio concilii,' 'S.C.C.'). This congregation still exists; it has acquired extended functions regarding other matters also.

Since the Council of Trent there has been a considerable increase in the sources of canon law. The immense number of papal constitutions is edited in the *Bullarium Romanum*, of which several editions have appeared, the most important being the *Magnum Bullarium Romanum* of Luxemburg (1726–58) and Rome (1733–56). There is also a *Bullarii Romani Continuatio* (Rome, 1835–57), bringing it down to Gregory XVI. (1831–46). These are in themselves only private collections. But Benedict XIV. (1740–58) published a collection of his own bulls (1754–58). The publication of this work is considered equivalent to a new promulgation; so that Benedict XIV.'s *Bullarium* has the same authority, as a collection, as the *Decretals* of Gregory IX., etc., in the *Corpus iuris canonici*. The disciplinary decrees of the Vatican Council (1870) form a *fons iuris* of great importance. The laws of Pius IX. (1846–78), including the Syllabus of 1864,[1] and of Leo XIII. (1878–1903)[2] are published in special collections. Since the Peace of Westphalia (1648) there have been concordats with various States, and provincial synods. During the late pontificate there has been considerable legislation. The Holy See functions through the Roman Congregations.

According to the reform of Pius X. (*Sapienti consilio*, 1908), there are now twelve Congregations of Cardinals: (1) 'S. Cong. Sancti Officii' (the Inquisition), which looks after matters of faith and morals, indulgences, matters affecting the theology of the sacraments, and certain marriage cases; (2) 'S. Cong. Consistorialis,' which has to do with consistories, and with the affairs of dioceses not under propaganda; (3) 'S. Cong. de disciplina Sacramentorum,' for disciplinary matters affecting sacraments; (4) 'S. Cong. Concilii' (*sc.* Tridentini), mentioned above; (5) 'S. Cong. de Religiosis,' for affairs of religious Orders; (6) 'S. Cong. de Propaganda fide,' for missions, with two divisions, one for the Roman rite and one for Eastern rites; (7) 'S. Cong. Indicis,' which forbids dangerous books; (8) 'S. Cong. sacrorum rituum,' for rites and ceremonies; (9) 'S. Cong. Cærimoniarum,' for non-liturgical ceremonies, especially those of the papal court; (10) 'S. Cong. pro negotiis eccl. extraordinariis,' for concordats and other affairs of special importance; (11) 'S. Cong. studiorum,' for schools, seminaries, and universities; (12) 'S. Cong. renouandæ fabricæ S. Petri,' which looks after the property and building of St. Peter's at Rome.

There are three Roman 'Officia': the 'Cancelleria apostolica,' which prepares and sends bulls concerning the erection of new dioceses, chapters, and other important matters; the 'Dataria apostolica,' which has to do chiefly with minor benefices; and the 'Camera apostolica,' which looks after the property of the Holy See, especially 'sede uacante,' and gives jurisdiction to the Camerlengo for that time. There are three Tribunals: the 'S. Poenitentiaria,' which has to do with matters of confession and others 'in foro interno' only; the 'S. Romana Rota,' the highest tribunal for all canonical cases; and the 'Signatura apostolica,' which is the court of appeal that may reverse the judgment of the Rota or of the congregations. Among the commissions instituted by Pius X. the most important for our purpose is the 'Commissio pro codificatione iuris canonici.' This has undertaken the enormous task of revising, simplifying, and codifying the whole body of Roman Catholic canon law.

The position of the Uniates (Christians of Eastern rites in union with Rome) has nothing abnormal in principle, though practically they have many points of canon law special to themselves. They are bound, as are all Catholics, by ecumenical laws, but not by all papal constitutions, since many of these are intended only for Latins. The sources of canon law for Uniates are the canons of synods held before the great schism of the 9th cent., except such as have been abrogated since; their liturgical books approved by the Holy See; and their local synods approved in the same way. There have been several of these, some of great importance, *e.g.* the Ruthenian Synod of Zamoisk in 1720,[1] the Maronite Synod of Mount Lebanon, held at the monastery of Deir Luwaise in 1736,[2] and the Armenian synod held at Rome in 1911.[3] They are bound by special papal constitutions for Eastern Churches and by decrees of propaganda addressed to them. In 1631 Urban VIII. declared that Uniates are bound by general papal decrees in three cases only: when the decree concerns a matter of faith, when they are expressly named, and when something is decreed which implicitly affects them. The local law of one Uniate church does not affect the others, unless it be explicitly extended to them; nor has the authority of one jurisdiction over the others, unless it is received by delegation from the Holy See.

LAW (Christian, Eastern).—1. Canon law in the Orthodox Church.—In general principles the Orthodox Church agrees with the Church of Rome as to canon law. She too recognizes the NT,

tradition (παράδοσις), custom (ἔθος), and positive ecclesiastical legislation (ἡ ἐκκλησιαστικὴ νομοθεσία) as the sources of canon law. But she takes a different attitude towards civil law. As the result of the long Byzantine period, during which emperors made laws for the Church which were accepted by Eastern bishops, the Orthodox Church gives more importance to the State in Church matters than does the Church of the West. Orthodox canonists explain this. They urge that, as the Christian State accepted canon law in its province, and confirmed Church law by civil proclamation and civil sanctions, so the Church accepts all State law, even that of heathen emperors, as hers, so long as this does not contradict the canons. By this acceptance the Church 'canonizes' State law and gives it promulgation from herself. John Scholasticus (6th cent.), in his collection of canons, includes as an appendix a number of the *Nouellæ* of Justinian I. which affect Church matters. The *Nomocanon* contains the rule: 'In cases where the canons contain no decision, we must follow the laws of the State.'[1] Theodore Balsamon (13th cent.), however, ascribes greater authority to the canons than to civil laws. In a case of conflict the canons, not the laws, must be obeyed. The Orthodox Church also ascribes canonical authority to the *responsa prudentum* (ἀποκρίσεις τῶν σοφῶν), *i.e.* the opinions of learned canonists given in the form of answers to questions or as statements. In this, like the Latin Church, she follows a principle of Roman civil law.

With regard to positive Church law (κανών in the strict sense) the Orthodox admit, as binding the whole Church, the 85 *Canons of the Apostles* (to which they still give apostolic and ecumenical authority, as containing principles derived from the Apostles, and as being confirmed by the Trullan Synod of 692) and the decrees of ecumenical synods. Of these they acknowledge seven, including the second of Nicæa (787) as the last. Although they hold their Church to be the whole Church of Christ on earth (so that she should have the same power of convoking an ecumenical synod as had the Church before the great schism), as a matter of fact they have held no synod claiming to be ecumenical since that schism. These are in theory the only authorities that can legislate for the whole Church, though the decrees of many particular synods and even canons of individual Fathers are considered to have acquired ecumenical authority by the later acceptance of the whole (Orthodox) Church. A Patriarch can legislate for his Patriarchate only; since the formation of permanent synods to govern national Churches, they give to these the same authority as a Patriarch has. In neither case can the particular authority legislate against the universal canons. In theory each bishop has the right to legislate for his own Eparchy, within the bounds of general law. He can summon diocesan synods, and promulgate laws for his people in the form of pastoral letters. In practice, however, this right is now much circumscribed. Each national Orthodox Church is considerably centralized under its Patriarch or Holy Synod. The independence of each national Church is balanced by a very complete dependence of each bishop within it. In the Orthodox States the government has much to say in the matter of the legislation of ecclesiastical authority.

The source of universal canon law for all Orthodox Churches is the *Nomocanon* compiled in the year 883. This is divided into fourteen titles. It contains the *Canons of the Apostles*, those of the seven ecumenical synods, those of ten particular synods, namely Ancyra (314), Neo-Cæsarea (between 314 and 325), Gangra (*c.* 340), Antioch (341), Laodicea (*c.* 343), Sardica (343), Constantinople (394), Carthage (419), Constantinople (861), and Constantinople (879). The *Nomocanon* adds so-called canons of thirteen Fathers, namely Dionysius of Alexandria, Gregory of Neo-Cæsarea, Peter of Antioch, Athanasius, Basil, Timothy of Alexandria, Gregory of Nazianzus, Amphilochius of Iconium, Gregory of Nyssa, Theophilus of Alexandria, Cyril of Alexandria, Gennadius of Constantinople, and Tarasius of Constantinople. These constitute the fundamental law of the Church. In the *Athenian Syntagma* (G. A. Rhalles and M. Potles, Athens, 1852–59), after these sources are added rules taken from St. Basil, St. John Chrysostom, St. Anastasius of Sinai, the synodical letter of Nicholas of Constantinople (895–925), and the *Canons* of Nicephorus Confessor and of John the Faster of Constantinople (582–595). After these (which are comprised under the heading διαφορά) comes the rubric τέλος τῶν ἱερῶν κανόνων. As these have been received by the various national Churches, they are considered now to have ecumenical authority.

The chief collections of canons are the *Nomocanon* of Photius (*c.* 883), who, however, only revised a former one, and that of John Zonaras (*c.* 1120), who used a different source from that of Photius. Theodore Balsamon, Orthodox Patriarch of Antioch residing at Constantinople, made a collection of canons after the order of Zonaras and dependent on his, and a commentary on Photius's *Nomocanon*. Already in the 5th cent. there was an *Epitome of Canons* (κανοικὴ σύνοψις) made by a certain Stephanus of Ephesus. To this, in course of time, other canons were added. About the year 1160, Alexius Aristenus, Nomophylax of Constantinople, wrote a commentary on this *Epitome*, and Simeon the Logothete edited the same *Epitome* in another arrangement, similar to that of Zonaras and Balsamon. The Emperors Leo III. (717–741) and Constantine V. (741–775) published an *Extract of Laws* (ἐκλογὴ τῶν νόμων) from Justinian. This and the following collections of civil law contain much canonical matter. In 1255 Arsenius, monk of Athos, composed a new *Synopsis of Canon Law*. In 1562 Manuel Malaxes published a *Nomocanon*. In 1335 Matthew Blastares made an alphabetical arrangement of laws (σύνταγμα). The most important modern printed collection of Canons is the *Pedalion* (πηδάλιον).[1] This was compiled in the first case by two monks of Athos, Agapios and Nikodemos, and was published by authority of the ecumenical Patriarch Neophytos VIII. at Leipzig in 1800. Theodoretos (ἱερομόναχος), who controlled the printing, added a number of passages which were opposed to the law of the Orthodox Church; but in 1802 the Patriarch sent out an Encyclical ordering all possessors of the book to erase these additions. A second edition, without them, appeared at Athens in 1841, and a third, revised by Sergios Rhaphthanes, at Zakynthos in 1864. This third edition contains the *Canons of the Apostles*, the Canons of ecumenical and particular synods, and those of the Fathers. To the text, commentaries (ἑρμηνεῖαι) and solutions of difficulties (συμφωνίαι), in modern Greek, are added. In 1852, two Greek lawyers, George A. Rhalles and Michael Potles, invited by the Athenian Holy Synod, began a new collection of sources of canon law. The work was completed in six volumes by 1859 and published at Athens. This is the *Athenian Syntagma* (Σύνταγμα τῶν θείων καὶ ἱερῶν κανόνων κ.τ.λ.).

Vol. i. contains Photius's *Nomocanon*, with Balsamon's commentary and other dissertations by older canonists; vol. ii.

[1] *Syntagma* (Athenian ed.), iii. 68 (*Nomocanon*, tit. i. cap. 28).

[1] In 1672 William Beveridge (afterwards bishop of St. Asaph's) published an important collection of Greek laws: *Synodicon siue Pandectæ canonum ss. Apostolorum et Conciliorum ab Eccl. Græca receptorum*, 2 vols., London. Nearly all later Orthodox collections are based on this.

gives the *Canons of the Apostles* and those of the ecumenical synods, with the interpretations of Zonaras and Balsamon; iii. the particular synods with commentaries; iv. the canons of the Fathers; v. synodical decrees of ecumenical Patriarchs, laws of Emperors which affect Church matters, *responsa prudentum*, and a number of disquisitions by various canonists; lists of sees and of the offices of the Great Church (the Byzantine Patriarchate), the Greek civil laws of 1852 regulating the organization of the Church of Greece and the Holy Synod which governs it; and vi. the *Syntagma* of Matthew Blastares and an alphabetical index of the whole work.

The *Athenian Syntagma* is the most complete collection of Orthodox canon law. It has been officially recognized, as an authentic codex, by the ecumenical Patriarchate and by most of the national Churches. For this reason N. Milasch judges that all canons contained in it must be regarded as having ecumenical authority.[1]

The Slav and Rumanian Churches have for the most part translations of Greek collections, with additions and commentaries.[2]

In modern times laws are made for each Church by its central authority. The tendency is now strongly in favour of synods and councils of various kinds, instead of the old rule of one Patriarch or Primate. Even the Patriarchs now have their synods, mixed councils, and so on. The later national Churches are governed by Holy Synods, formed after the model of the Russian one (formed in 1721). These synods, under considerable influence from the governments, make laws regulating all the affairs of their Churches.[3]

2. The lesser Eastern Churches.—Each of the Nestorian and Monophysite Churches has its own system of canon law, evolved from the general principles of Eastern Church law with the necessary special modifications. They do not seem to have a clear concept of the difference between ecumenical and local law. As each is an *Œkumene* to itself, the two concepts naturally are confused. They admit in their canon law the decrees of certain early councils, which they recognize, and have then their own rules, made by their special synods and Patriarchs. In the Middle Ages these Churches evolved schools of canon law of some importance. They have great canonists among their writers. In modern times, at least among the Nestorians and Jacobites, there is a tendency to replace the old canons by new decisions made for each case by the Patriarch, in agreement with the other bishops or notables.

Nestorian canon law is derived from three main sources. First come the 'Western Synods,' *i.e.* such synods held in the Empire before their schism as they recognize. These include many particular synods, such as those of Antioch (341) and Ancyra (358). There is a collection of these made by Mâruthâ of Maiferḳat in 410, to which the disciplinary canons of Chalcedon (451) were added later. The second source is the 'Eastern Synods,' namely, those held by Nestorian Katholikoi down to the 8th century. The old rule was that each Katholikos should hold a synod as soon as he was appointed. An unknown Nestorian collected these in the *Book of the Synhâdaus* between 775 and 790. The *Synhâdaus* begins with the Synod of Mar Isaac in 410 and ends with that of Mar Ḥnânyeshu' II. in 775; an appendix adds the Synod of Mar Timothy I. in 790. The *Synhâdaus* also contains a selection of canons of Western synods. This is the chief Nestorian canonical authority.[4] The third source consists of all laws made since the 8th century. These have not been completely codified. In the 13th cent. 'Ebedyeshu' Bar Barîkâ, Metropolitan of Nisibis, made a codex from those three sources. This is the *Nomocanon of Ebedjesus*, the most complete collection of their laws.

The chief sources of *Coptic* canon law are the 31 canons of the Patriarch Christodulos (1047–77), the 30 canons of Gabriel II. (1131–46), and the canons of Cyril III. (1235–43). Gabriel III. not only made canons himself, but ordered that a complete collection of all those existing should be drawn up. The *Abyssinian* Church recognizes and obeys Coptic canon law.

The *Jacobite* Church once had a considerable school of canonists. Bar-Hebræus, their greatest theologian, was also one of the most important of all Eastern canonists. His *Nomocanon* (*Ktâbâ dHuddâye*) remains their classical collection.

The *Armenian* Church recognizes the first three General Councils, but even before she was separated from the rest of Christendom she began to have her own canon laws. The most famous particular Armenian canons of antiquity are the 21 canons of the Katholikos Isaac issued about the year 406.[1] Then from the time of the Synod of Tovin (Duin), about the year 554, which condemned Chalcedon, the Armenians have had a long series of national synods, each of which added to their canon law. The acts of these synods have been collected and translated by Angelo Mai.[2] In modern times Russian laws affecting the supreme Katholikos of Etchmiadzin, the virtual separation of Armenia in Turkey from his jurisdiction, and the formation of the National Assembly and diocesan councils have completely modified the old law. The Katholikos of Etchmiadzin has a theoretic authority over the whole Armenian Church, which he exercises in conjunction with his permanent synod of seven auxiliary bishops. In affairs of the greatest importance he would, no doubt, take the lead in forming a new law; otherwise he has little real authority beyond his own Patriarchate. The practical head of the Armenian Church in Turkey is its Patriarch of Constantinople. He is assisted by a National Assembly, composed for the most part of laymen. With these he rules and makes laws. In each diocese there is also a council of laymen, and in each parish a body of lay administrators, who look after the property and have much to say in all Church affairs. The modern Armenian Church is ruled practically by the decisions of these assemblies.

LAW (Christian, Anglican).—**1. Nature of the present Anglican Church law.**—The Anglican Communion is a federation of more or less autonomous Churches; hence its ecclesiastical law varies in different countries. It consists partly of the written law which is now universally acknowledged to be in force, and partly of custom, depending in a large degree on the ancient and mediæval canon

[1] *Kirchenrecht der morgenl. Kirche*, p. 80.

[2] For these see Milasch, *op. cit.* pp. 137–157, 191–199; F. H. Vering, *Lehrbuch des Kirchenrechts*, Freiburg i. Br., 1893, pp. 58–63.

[3] The best account of the constitution of each national Orthodox Church is Silbernagl's *Verfassung* (see literature).

[2] In his *Veterum Scriptorum noua collectio*, Rome, 1825–38, vol. x. p. ii.

law of Western Christendom. In England and Wales (also in Man, Berwick-on-Tweed, and the Channel Islands) complications arise owing to the close connexion between Church and State, which involves the result that the Church's law cannot become binding unless the State assents to it. This is the case also in India, where the relations of Church and State are very close. But in most of the other branches of the Anglican Federation the Church is free to make its own laws, which become binding on the basis of a voluntary contract (see below, § 6).

(*a*) In *England* the present written ecclesiastical law is mainly found in the 'Book of Common Prayer' and the 'Ordinal' of 1662 (these are the popular titles only), in the Thirty-nine Articles of 1562, and in the canons of 1603 (1604), as slightly amended in later years. The Prayer Book and the Ordinal, after being agreed upon by the Convocations, were enacted as part of the statutory law of the realm by being inserted as a schedule in an Act of Parliament known as the Act of Uniformity of 1662. We need not here enter into the vexed question of later Acts of Parliament affecting the Church, in which the Church as such had no part. The Thirty-nine Articles have also the authority both of Church and of State. Thus the Prayer Book and Articles are certainly binding on both clergy and laity. The canons of 1603, as also those of 1640, 1865, 1888, which added to or amended them, were agreed upon by the Convocations and published by the sovereign's authority under the Great Seal (Blunt-Phillimore, *Church Law*, pp. 17 f., 371 ff.; in the latter place they are given in full as amended).

There was an irregularity in that the Royal Letters Patent were given for the 1603 canons before the York Convocation had discussed them, though after the Canterbury Convocation had passed them. The York Convocation, however, obtained the king's licence to discuss them afterwards, and then passed them (J. H. Overton, *The Church in England*, London, 1897, ii. 11). The validity of the 1640 canons, which were passed before the fall of Laud, was disputed (see Overton, ii. 77 f., 88). The predecessors of the 1603 canons, those of 1571, held good only in Elizabeth's reign. They are given in English and Latin by W. E. Collins in the Church Historical Society's publications, no. xl. (London, 1899).

The canons of 1603 as amended undoubtedly bind the clergy, but it is uncertain (seeing that they have not been sanctioned by Parliament) how far they bind the laity.

Lord Hardwicke (in Middleton *v.* Croft [Blunt-Phillimore, p. 23]) was of opinion that they do not '*proprio vigore* bind the laity, but only the clergy,' adding: 'I say *proprio vigore*, by their own force and authority, for there are many provisions contained in these canons which are declaratory of the ancient usage and law of the Church of England received and allowed here, which in that respect and by virtue of such ancient allowance will bind the laity.'

The Prayer Book and canons as at present in force have been somewhat influenced by Royal and Episcopal Injunctions from the Reformation onwards.

Besides the laws mentioned above, the great canonists of the 18th cent., such as Gibson, mention numerous Acts of Parliament which deal with crimes against the moral law, and with marriage and other matters which affect the Church. With these we are not here concerned.

(*b*) *Church of Ireland.*—The present written law is founded on a 'Constitution' agreed upon in 1870 by the archbishops, bishops, and representatives of clergy and laity in a General Convention assembled in Dublin, and of 'constitutions and canons ecclesiastical' decreed by General Synods in 1871, 1877, and 1889. The Constitution of 1870 and the 'constitutions and canons ecclesiastical' have since 1909 been consolidated in a single Constitution, the 'constitutions and canons ecclesiastical' being ch. ix. thereof. The written law also includes the Thirty-nine Articles and the (revised) Book of Common Prayer and the Ordinal, approved in the Constitution. We must here notice the difference between the ancient and modern use of the word 'constitution.' Originally a 'constitution' was much the same as a 'canon,' and so it is in the titles of the English and Irish codes of canons. But the word 'constitution' as now used often means a more fundamental document than the canons, one governing the organization of the Church (see below (*d*)).

(*c*) *Episcopal Church in Scotland.*—The constitution here is contained in the canons, and is not a separate document. The written law consists of a code of canons passed in 1911, built up on the basis of codes of previous Provincial Synods in 1743, 1811, 1828–29, 1838, 1863–64, 1875–76, 1890, and 1905. The present code authorizes the services of the Prayer Book, with certain modifications, and also of the 'Scottish Liturgy or Communion Office,' and forbids departure from them 'in public prayer and administration of the Sacraments or in the performance of the other Services,' except as the code provides. In this branch of the Federation the word 'constitution' is used for a document subsidiary to the canons. Each incumbency must have such a 'constitution' regulating matters not dealt with in the canons, especially with the patronage of that charge. Such a constitution is an agreement between the bishop of the diocese and the clergy and laymen of that congregation. The constitutions of different incumbencies vary considerably.

(*d*) *United States of America.*—The 'Protestant Episcopal Church' revised the Prayer Book in 1790, soon after the War of Independence, and again in 1892. A Constitution was adopted at Philadelphia in 1789, and since modified; canons have been passed at various dates.

In Scotland the canons, and in Ireland and the United States the constitution and canons, are primary, and the Prayer Book has authority only because these documents prescribe it.

(*e*) *British colonies.*—In the Colonial Churches of the Anglican Federation the process seems to have been as a rule different from that which has just been described. The Prayer Book has descended to them, being daughters of the Church of England, as a primary authority, and in some cases they have bound themselves to make no alterations in it until the mother Church takes action, or have limited themselves in some degree in this direction. Most or all of them, however, have also made canons to regulate their internal affairs, and these have validity because of contract (see above; and, for further details, cf. § 4). In some branches of the Federation, as in S. Africa, dioceses are also permitted to make canons for themselves on purely local matters, in submission, however, to the provincial canons. This is not allowed in Scotland or in Ireland, where the resolutions of diocesan synods have not the nature of canons, and have no binding power as such.

2. **The legislative bodies of the Anglican Churches.**—In *England* there are two provinces, of Canterbury and York, and each has two Houses of Convocation, the Upper House consisting of the diocesan bishops, and the Lower House of the deans, the archdeacons, and the proctors (or representatives) of the clergy. Two consultative Houses of Laymen are also appointed—one to assist each Convocation; but this is a voluntary and modern arrangement, having no recognition in law. The Convocations can, under Royal licence, discuss and pass canons; but these have no effect until they receive the sovereign's assent. In practice, the Convocations very rarely pass canons; and, owing to the connexion with the State, no other laws can receive validity until they have passed the Civil Legislature as Acts of Parliament.

In the non-established branches of the Anglican Federation there are General (or Provincial) Synods —called Conventions in America—for the purpose of legislating. In the *Episcopal Church in Scotland*, which now has one province only (the metropolitan powers being held in commission by the seven bishops), the Provincial Synod consists of two chambers, the first of the bishops, and the second of the deans of the seven dioceses, about 35 representatives of the clergy, and one or two clerical officials. Each chamber must assent by a simple majority to any change in the canons before it can take effect. The Synod meets only when legislation is required; but, before any changes provisionally made by the Synod have been confirmed at a subsequent meeting of Synod, such proposed alterations must be submitted to a mixed Consultative Council, consisting of the bishops, about 40 clergy, and the same number of laymen, who meet all together (but may, if desired, vote or debate by orders), and may, if they think fit, express any opinion on the changes, or suggest other alterations. The Consultative Council may also suggest legislation in the first instance, and this was the course adopted in 1911, when it carefully discussed the whole code and noted the changes which it desired.

In the *Church of Ireland*, where there are two provinces (of Armagh and Dublin), there is a single General Synod which legislates, consisting of two Houses, the one of bishops, and the other of representatives of clergy and laity, who normally sit all together. According to the present Constitution, the representatives of the clergy number 208, and those of the laity 416. Voting by orders is provided for. Unless in certain exceptional cases, each House must assent to any change, and, if the laymen and the clergy vote by orders, also each order.

In the *United States* the General Convention consists of two Houses, the one of the bishops, the other of 'deputies' or representatives, not more than four presbyters and four laymen from each diocese. Both Houses must agree to any change in the law before it becomes valid. A vote by dioceses and by orders is provided for if desired, under the regulation that the dioceses are in that case equalized by only one clerical vote and only one lay vote being allowed for each; and a majority of dioceses and of each order is then required for legislation. The General Convention meets once every three years.

In most of the *Colonial Churches* of the Federation, legislation (which, however, as we have seen, is somewhat limited) is effected by synods consisting of bishops, and clerical and lay representatives. It is usually enacted that voting and debating may be by orders, and, if so, that a majority of each order is necessary for carrying any alteration.

3. The older canon law and customary law.—(*a*) *Origin and growth.*—The written law—except the law of God, or the Moral Law, which has been universally regarded as unalterable—has gradually grown up, coming from decisions of 'individual great bishops, but later on in the shape, usually, of canons of councils' (Collins, *Nature and Force of the Canon Law*, p. 13). Such councils were either ecumenical (general) or local (see art. COUNCILS AND SYNODS [Christian]). As time went on, their regulations increased greatly in number, and collections of canons were made. Among these may be mentioned those of Dionysius Exiguus (*c.* A.D. 500), Isidore of Seville (early 7th cent.), whose work was supplemented in the 9th cent. by 'pseudo-Isidore,' the compiler of the great collection which contained the 'Forged Decretals,' and Gratian (12th cent.), whose *Decretum* was the corner-stone of mediæval canon law, and is sometimes called the *Corpus iuris canonici* (Collins, p. 19; see, further, above, p. 835 f.). The mediæval system of canon law was not at first meant to be more than something to be aimed at, and it was never fully carried out, any more than the liturgical regulations which set forth the elaborate ceremonial possible in the great cathedral of Salisbury were thought to be practicable in every little parish church of England. In this respect the older canon law differs from civil law, especially from modern civil law, which is much more rigid, though not so logically complete or so fully systematized. This fact has a great bearing on the binding nature of the canon law in later times (see below (*d*)). In the Middle Ages the more rigid view of law gradually grew up, and, at least since the Reformation, an ecclesiastical canon is as much and as literally obligatory on those who are bound by it as any civil law.

(*b*) *How far it was accepted in England in mediæval times.*—On this point there has been some controversy. According to one view, it was held to be valid in England only when accepted by Act of Parliament or by custom. This is the opinion of Gibson (*Codex*, ii. 945–947), who quotes Acts of Parliament of the time of Henry VIII., asserting that the old canons were accepted only if not contrary to the laws (of England) and the royal prerogative. Only those laws which were made by the realm or were acknowledged by common assent or established custom were received. Gibson illustrates this by citing the proposal to legitimate in England children born before marriage. Pope Alexander III. had published a canon to provide for this, but it was against the law and custom of the kingdom, and, when the bishops tried to introduce it, the Lords (in the Parliament of Merton, A.D. 1236) declared that they would not have the law of England altered ('nolumus leges Angliae mutari'). Gibson also gives other instances. With regard to this legitimation question it is noteworthy that Scotland did accept the papal canon, while England did not, and that, therefore, to this day the laws of the two countries differ in this respect. On the general subject Ayliffe (*Parergon*, p. xxxiii) expresses a similiar view. On the other hand, F. W. Maitland, a high authority, has maintained that, at any rate according to the canonists of the 14th and 15th centuries, the canon law as a whole *did* run in England then (*English Historical Review*, July and Oct. 1896, Oct. 1897). He is here followed by Eves (*Prayer Book Dictionary*, p. 128) and, apparently with some hesitation, by Collins (*op. cit.* p. 35 f.). There is perhaps not really any great difference between these two views. Everything depends on what is meant by 'accepted.' The one view holds that the 'canonists'—ecclesiastical writers who compiled codes of canons—considered that the complete Western canon law (with some local reservations) was accepted, but that the State would not allow parts of it to be put in force. On the other hand, much of the old canon law had, as a matter of fact, no practical effect in England. And, if we bear in mind the difference between canon and civil law (below (*d*)), this is all that practically concerns us.

(*c*) *Collections of English ecclesiastical laws.*—A very early collection of English 'constitutions' was made by William Lyndwood or Linwood (who in 1442 became bishop of St. David's), under the name of *Provinciale*; he gives 14 constitutions by Archbishops of Canterbury from Stephen Langton (1207–29) to Chichele, which bring us down to the middle of the 15th century. But the greatest activity in this respect is found in the 18th century. John Ayliffe's *Parergon* (new edition published in 1734) was, as its second title states, a 'commentary

by way of supplement to the canons and constitutions of the Church of England.' John Johnson (the famous vicar of Cranbrook) published in 1720 his (English) *Laws and Canons* (up to the Reformation), arranged chronologically as a history. David Wilkins' *Concilia*, first published in 1737, carries the collection down to 1717; and Edmund Gibson, bishop of London, 1723–48, whose famous *Codex* was brought out in a second and considerably enlarged edition in 1761, gives the canons and the Acts of Parliament which relate to the Church, arranged according to subject instead of chronologically.

No one in the older days did for Scotland what Lyndwood did for England; but in our own time Joseph Robertson has collected the Scottish provincial constitutions under the title of *Statuta Ecclesiæ Scotticanæ*.

(*d*) *How far the older canon law is now binding.*—The opinion has been expressed that the whole of the *Corpus iuris canonici* is now binding, unless explicitly repealed by an authority equal to or higher than that which enacted it. It has been maintained that a council of inferior status cannot repeal the canons of one of higher status, or a local council those of a larger one. The result would be that the Anglican Church of to-day would be bound by a number of ancient regulations which have little or no relation to the needs of the time. Such a view, however, looks at canon law from the point of view of the civil law. In the case of an Act of Parliament, laws remain in force (at any rate in England) till repealed by a later law. But this was not meant to be the case with canon law, in which desuetude could repeal. A contrary custom invalidated it, and canonists have debated how long the custom must have existed to do so—in some cases ten years, in others forty years being fixed on (see above, p. 834 f.). This was also a principle of the Roman civil law (Collins, pp. 25–30; see also Eves, in *Pr. Bk. Dict.*, p. 126). It is stated, indeed, by E. G. Wood (*Regal Power of the Church*, p. 84) that 'the question whether any particular law has been abrogated by desuetude is one far from being easy of solution. It is one requiring the application of a highly technical set of rules, maxims, and limitations, by an expert possessed of considerable skill and canonico-legal instinct. It is, moreover, only within a very limited area that desuetude can effect abrogation of common law.' But, as Collins remarks (p. 32), this allows the principle in words but denies it in application.

It is instructive to turn to one or two instances of repeal of canons or other regulations by desuetude; and we may take the most difficult case, the abrogation of those enacted by an ecumenical council. The 15th canon of Nicæa forbade the translation of a bishop, priest, or deacon from one city to another, but almost immediately the canon fell into desuetude; a partial revival of its spirit is seen in the American branch of the Anglican Communion, for that body greatly dislikes the translation of bishops. Again, the decree of Nicæa about the keeping of Easter has been modified. That ecumenical council decided that the Church was to follow the existing Roman computation (see the encyclical letter of the council, and also Constantine's letters, given by Socrates in *HE* i. 9). But Pope Gregory XIII., in 1582, modified the regulation, being followed by other countries at an interval—by England in 1752 (the Græco-Russian Church has not yet done so). Those, therefore, who hold the Anglican position that a pope is not above an ecumenical council must take this as an instance of the canons of such a council being repealable by custom or by an inferior authority. Another example is the 20th canon of Nicæa, which decrees that all are to offer prayer to God standing and not kneeling on the Lord's day, and 'in the days of Pentecost,' *i.e.* in Eastertide (see art. KNEELING). But this has long been obsolete in the West. And, if we go into the canons of the older councils, ecumenical or otherwise, we shall be struck by the fact that a very large number are now obsolete. It has been calculated that the majority of the canons of Nicæa have thus been abrogated in the West, and to a large extent in the East (Collins, p. 25).

These and similar considerations make it difficult to maintain that a local Western Church cannot alter, for its own organization, regulations which were once (*ex hypothesi*) in force in the whole of the West. As a matter of fact, the alteration of mediæval canon law did not take place at any one time in England. A 'Reformatio Legum' was, indeed, attempted in the disturbed times of the 16th cent., but it came to nothing. The process was a gradual one. But the effect of the older canon law has been that there is, as there always was to a certain extent, a *customary law*, which is largely the outcome of old written enactments; and so far the older canon law has frequently been appealed to in ecclesiastical suits. (On the whole question see the learned essays by W. E. Collins and E. G. Wood cited above; these writers hold different views on the subject.)

It may be noted that, in the Episcopal Church in Scotland, the canon on interpretation in the 1863 and 1876 codes enacted that the general principles of canon law should alone be deemed applicable thereto. This was modified in 1890 by the enactment that the canons are in all cases to be construed in accordance with the principles of the civil law of Scotland, but that any generally recognized principles of canon law may be appealed to in cases of dispute and difficulty. These provisions have all disappeared from the present code (1911). In S. Africa (can. 30, code of 1883) the same provision is made as in the Scottish canons of 1863.

It may be of interest to give one or two instances of customary law in the (local) Church of England at the present day. Since 1604 lay baptism comes under this head (see LAITY). The irremovability of beneficed clergy is a matter of custom; as also is the consecration of churches and churchyards, the reading of the lessons at Matins and Evensong by laymen, and the saying (as is done in some cathedral and collegiate churches) of the first part of the litany by lay clerks.

4. Contents of the canons, etc.—(*a*) *English canons of 1603 as since amended.*—These deal (1, 2) with the king's supremacy, and (3–12) with the assertion of the Church of England as a true Church. Canons 13–30 deal with the due celebration of divine worship, the keeping of Sundays and Holy Days, and the use of the litany, with rules for the service of Holy Communion and for the vestures to be used thereat, with the reception of that sacrament, and the repelling of persons therefrom, and with baptism, sponsors, and the sign of the cross. Canons 31–76 deal with the ministry, and give rules about ordinations, subscriptions of assent, institution to benefices, simony, plurality, residence of clergy, strange preachers, the 'bidding prayer' before sermons, vestures, catechizing, confirmation, marriages, visiting the sick, burials, private conventicles, sober apparel and life, etc. Canons 77–79 deal with schoolmasters, canons 80–88 with churches and their furniture, glebe-lands, etc., canons 89–91 with church-wardens and their assistants, and with parish clerks. Canons 92–138 deal with ecclesiastical courts, both those of an archbishop (including matters of marriage and divorce) and those of a bishop, and give rules as to ecclesiastical judges, surrogates, proctors, registrars, and apparitors. Canons 139–141 deal with synods.

(*b*) *Church of Ireland.*—The 'constitution' of 1909 is divided into fifteen chapters. The first five give the functions and organization of general and diocesan synods, and deal with parochial machinery and the appointment to cures of souls; the 6th with the election of archbishops and bishops; the 7th with cathedrals; the 8th with ecclesiastical tribunals and offences; the 9th contains the canons; the 10th and 11th deal with the representative body which holds Church property and with certain funds; the 12th and 13th with burial-grounds, glebes, and parochial buildings; the 14th and 15th with provision for widows and orphans of clergy and with superannuation. The canons have in the main the same antiquated appearance as the English canons, being the older code with some quite modern additions. They regulate (1–6) divine service, (7–16) preaching, catechizing, baptisms, burials, marriages, confirmation, private communions, etc.; and deal with (17) archdeacons, (18–22) ordinands, (23–25) institution to and patronage of benefices and simony, (26–33) the work and life of ministers and their assistants, (34–40) the

furniture and ornaments of churches, Holy Communion, and other services, (41) the consecration of churches, (42–43) duties of church-wardens and 'select vestries,' (44–46) repair and furnishing of churches, etc., (47, 51) appeals, (48) the General Synod, and (49, 50, 52–54) repelling from and readmission to Holy Communion.

(*c*) *The Episcopal Church in Scotland* has gradually built up its canons since 1811, and the code has a more modern appearance. It is now arranged as follows: canons 1–10 deal with the Primus (the presiding bishop), and diocesan and coadjutor bishops, and their appointment and jurisdiction, and with cathedral churches; canons 11–20 with the ordination and licensing and duties of presbyters and deacons, subscriptions of assent and institution to benefices, and with lay readers; canons 21–29 with the services of the Church; canon 30 f. with vestures, and with the structure and ornaments of churches; canons 32–38 with congregational organization; canons 39–45 with diocesan and provincial officials; canons 46–50 with synods and councils; and canons 51–53 with judicial proceedings and disputes, notices, and interpretation. A bulky set of appendices not only give the forms of deeds, but also, gathered together in one place, the list of additions to and deviations from the Book of Common Prayer, as canonically sanctioned.

(*d*) *United States.*—The 'constitution' is divided into eleven heads dealing with (1) the General Convention, (2) the election of bishops, (3) bishops for foreign lands, (4) standing committees in each diocese as the bishop's advisory council, (5, 6) admission of new dioceses and missionary districts, (7) provinces, (8) ordination and admission of strangers, (9) trials, (10) authorization of the Prayer Book, and arrangements for revising the same, and (11) alterations in the constitution. The canons (1902) are much more detailed, and are of great length. They are divided into four 'titles,' each with many subdivisions. The first deals with the ministry and church services, the second with discipline (including marriage and divorce), the third with organized bodies and officers of the Church, the fourth with the enactment and repeal of canons.

(*e*) *South Africa.*—This province has one or two peculiarities. Its constitution, as made in 1870 and 1876, accepts the doctrinal standards and Prayer Book of the Church of England, and disclaims any right of altering them *proprio motu*, but with the proviso that the province is not bound by the interpretations of them by any ecclesiastical or other tribunal except its own (this famous proviso has since been altered). The constitution makes the provincial synod the legislative body, and says that it can adapt, abridge, and add to the Church Services if such alterations are consistent with the spirit and teaching of the Prayer Book. It can also review and revise any diocesan canons, (above, § 1), and can alter its own constitution and its canons. The canons of this province have been frequently amended. Besides legislating, the provincial synod frequently passes 'resolutions.' It is understood that these are only expressions of opinion, and are not legally binding on members of the Church.

(*f*) It is not necessary to do more than refer to two other examples of the law of the colonial branches of the Anglican Federation, as having originated in somewhat different circumstances. The branch in *Canada* has a constitution as well as canons. The former was made under the authority of an Act of the Provincial Legislature in 1857 (19–20 Vict. ch. 121), which sanctioned the meeting of bishops, clergy, and laity in the province to make a constitution and regulations, and the meeting of those in each diocese to make diocesan regulations. Another Act of 1858 explained some details. The Anglican Church in *New Zealand* has a constitution first made in 1857 as a 'voluntary compact' between the members of the Church in the colony; it has the same limitation of powers as the province of S. Africa has in the matter of altering formularies. The whole question of the *nexus* between the daughter and the mother Church is being keenly discussed in this colony, as is also the case in Australia, especially since all the dioceses of that continent have been federated in one organization.

5. Church law and State law when divergent.—When a voluntary club or society makes laws which are consistent with the laws of the State, and the latter afterwards alters its laws so as to be inconsistent with those of the club or society, the laws of the club or society in the ordinary course must go by the board. When, however, the society is a religious community, the question of moral obligation may arise, and the individual has then to ask himself whether he ought to obey the law of his Church and break the law of the State, taking the consequences of such action. Whether he is morally justified in doing so must depend on circumstances. If a heathen State commands one of its Christian subjects to sacrifice to a heathen god and his Church forbids him to do so, he must necessarily choose between the two, and few at the present day would fail to think him justified in determining to break the State law, even though he had to face martyrdom. Such contradictions between Church law and State law are less likely to arise in times and in States which tolerate diverse religions, and which have determined more clearly than in older days what is the province of each in legislating. But divergences may often arise. It is proper to observe, however, that this means merely that the State allows what the Church as a whole, or a part of the Church in particular, forbids. To take an example from recent legislation: in Great Britain and in some other countries a man is now allowed by the State to marry his deceased wife's sister. But this does not mean that every Church[1] must allow its own members to do so; each Church has the right, if it sees fit, to say that any of its members who use the liberty given by the State shall not be married by one of its ministers or in its buildings, or shall not be considered any longer a member, or shall be repelled from Holy Communion for a longer or a shorter time. There is no real *contradiction* here between the Church law and the State law; it is not as if the State had enacted that every widower *must* marry his sister-in-law, if he has one. This has been taken as an example only. The general principle is that a particular society may limit for its own members a liberty allowed or not forbidden by the State.

6. Interpretation of ecclesiastical law.—In the Church of England a great controversy has gone on for more than a generation as to the validity of the courts which interpret the ecclesiastical law. Into this controversy we cannot enter here, except to say that it turns on the question whether the State can erect ecclesiastical courts (the Judicial Committee of the Privy Council and that of the judge under the Public Worship Regulation Act) without the assent of the Church. The controversy appears to be no nearer a solution now than it was when it arose; and it has practically paralyzed the actions of the ecclesiastical courts with regard to questions of worship. Various solutions have been proposed, but the difficulties have been great, and are enhanced by the close connexion between the Church and the State. It may be said, however, that the controversy does not turn on the question who the

[1] For simplicity we may put aside the case of an established Church and deal only with one that is not established.

judges, the interpreters of the law, are—whether bishops or laymen—but on the question by whom their court has been appointed, and whether an ecclesiastical or quasi-ecclesiatical court is bound by the decisions of a superior court (the Judicial Committee) which does not profess to be anything but a State court.

It may be useful to consider how the Church law is interpreted in the non-established branches of the Anglican Federation. In these each Church has set up its own courts, and there is no dispute as to their validity. They may give an erroneous or foolish decision, but their power of deciding has not been questioned; it is explicitly acknowledged by those who make the subscriptions required of them before receiving an office. In the Church of Ireland the supreme court consists of three bishops and four lay judges, and, though the latter are in a majority, the spiritual character of the court has never been questioned. In the Episcopal Church in Scotland the supreme court (which is the court of appeal from the bishop in synod, and the court of first instance in the trial of a bishop) consists of all the diocesan bishops only, though they may (and, as a matter of fact, always do) have a lay assessor learned in the law to advise them, without being bound to follow his advice. The American and Colonial branches have each set up their own court, variously constituted, but on more or less similar lines.

But the question arises, What is the relation of such voluntary ecclesiastical courts to the State courts? The former can command obedience to their interpretation of the law only by virtue of the contract entered into by those who come before them. Every clergyman, before being ordained or receiving any office, makes a subscription, not only of doctrinal agreement with the Church, but promising obedience to its canons and tribunals. It is, therefore, instructive to see what view the State would take of the decisions of such Church courts. We may take the position of the Episcopal Church in Scotland as a good example of this attitude, since two or three cases in which that Church has been concerned (one of primary importance) have arisen to illustrate it.

In the case of Forbes *v.* Eden and others (*Leading Ecclesiastical Cases decided in the Court of Session, 1849-1874*, Edinburgh, 1878, p. 388 ff.), the Rev. G. Forbes, an incumbent at Burntisland (well known for his liturgiological eminence), disapproving of certain canons made in the General or Provincial Synod of 1862-63, and maintaining that he was not bound by them, as he had promised obedience at his ordination to the code previously in force, sued all the members of this synod to have, *inter alia*, the new canons declared null and void. The case was given against him by the unanimous decisions of the Court of Session in 1865 and of the House of Lords in 1867, on the ground that the code of canons which he had subscribed provided for alterations being made, and that the said synod had fulfilled all necessary requirements for making alterations. The new canons then enacted were, therefore, binding on all. In the Inner House—the Court of Appeal—Lord Cowan said that it was the province of the civil courts to redress civil wrongs. It was not their province, and it had not been their practice, to interfere as a court of review with the theological dogma or the internal regulations on discipline of religious sects or denominations. In the House of Lords the Lord Chancellor said that no civil court could take cognizance of the rules of a voluntary religious society made for the regulation of its own affairs, except so far as they related to collateral questions affecting the disposal of property. This judgment, then, makes it clear that an autonomous Church can alter its laws, if its code contains provisions to that effect.

In a more recent case, which was taken to the House of Lords (*Scottish Guardian*, Edinburgh, 1893, pp. 148, 504), it was remarked in the Inner House by Lord Young that the civil courts could not entertain an action concerning merely the government of the Church unless it involved a breach of contract; and this principle was affirmed in the House of Lords, which gave an additional ground of action before the civil courts, namely, if the managers of a congregation had in trust some funds of which the pursuer was in whole or in part beneficiary, and if they refused to pay him. To this extent would the civil courts investigate and decide on the Church documents.

The civil courts might be called in if a clergyman deprived or suspended by the Church courts declined to recognize their sentence. The Church, having no power in itself to enforce its decrees, must invoke the help of the civil courts, if necessary, to ensure the carrying out of the contracts made. This might happen if the clergyman in question refused to give up his parsonage or church; or, if costs were given in the ecclesiastical courts against a certain party, and payment was refused, the civil court might be called in. In such cases the State tribunal would treat the case purely as a matter of contract, and they would investigate whether the procedure in the Church court had been regular and in accordance with the current canons. In the Forbes case (see above), where Forbes sued for damages because he was refused an assistant curate, Lord Benholme remarked that 'this exercise of ecclesiastical discipline on the part of the bishop under the superintendence and review of the ecclesiastical court of appeal' could not be made the subject of a civil claim for damages in the Court of Session (*Leading Eccles. Cases*, p. 426).

From what has been said it would appear that, if a clergyman deposed for heresy by the Church courts appealed to the civil courts, the latter would not determine whether or not the doctrine in question was in accordance with the formularies of the Church, but would ask whether the Church courts to which the clergyman had promised obedience had proceeded regularly. In the discussions it is quite possible that doctrinal questions might be touched on, as, in fact, was done in Forbes *v.* Eden, when the Eucharistic Controversy was referred to, and (as might be expected when men go outside their own line of study) some curious *obiter dicta* in theology and ecclesiastical history were uttered. But this would happen only incidentally.

An important question of Church law was touched on in Forbes *v.* Eden, which illustrates the recent case of the Free Church of Scotland. In the latter case, as the present writer understands it, it was ruled by the House of Lords that the Free Church had not in its constitution explicit powers of complete alteration, but was subject to the limitation that certain things were unalterable. Something of this sort was the case in the Episcopal Church in Scotland from 1838 to 1890, when the codes of canons limited the alterations to those which were 'in conformity with the recognized constitution of the Church' (until 1863 also with its 'acknowledged practice'). In the Forbes case in 1865 the Lord Ordinary observed that the 'civil courts do not undertake to protect Churches or individual members of Churches from the influx of new doctrines. They only interfere to prevent the uses of property being perverted through its being retained by a majority who only keep the name while they have abandoned the principles of the Church to which it was devoted' (*Leading Eccles. Cases*, p. 401 n.). In the Inner House Lord Inglis said that a majority may be restrained on the application of a minority from carrying an alteration of a fundamental article of the constitution, and as an illustration said that a proposal to abolish the Thirty-nine Articles and to substitute Knox's Confession of Faith of 1567 would require unanimity in the Episcopal Church (*ib.* p. 404). In the Provincial Synod of 1890 the limitation on the power of alteration contained in the vague phrase 'recognized constitution' was removed.

Experience, then, tends to show that a non-established Church may make, interpret, and administer its law, in the existing civil conditions of this country, without any undue interference from the State. But it must be careful to see that its autonomous powers are clearly laid down in the documents that govern it.

LITERATURE.—i. *OLDER BOOKS.*—R. Hooker, *Ecclesiastical Polity*, Oxford, 1843, etc., bk. viii.; W. Lyndwood, *Provinciale*, new ed., do. 1679; D. Wilkins, *Concilia Magnæ Britanniæ et Hiberniæ*, 4 vols., London, 1737; J. Johnson, *Collection of the Laws and Canons of the Church of England*, do. 1720, new ed. (by J. Baron), Oxford, 1851; J. Ayliffe, *Parergon Juris Canonici Anglicani*[2], London, 1734; E. Gibson, *Codex Juris Ecclesiastici Anglicani*[2], Oxford, 1761.

ii. *MODERN BOOKS* (a small selection).—J. H. Blunt [and W. G. F. Phillimore and G. E. Jones], *The Book of Church Law*, London, 1899; P. A. Lemprière, *A Compendium of the Canon Law*, Edinburgh, 1903 (has special reference to the Episcopal Church in Scotland); R. S. Eves, art. 'Canon Law,' and G. Harford, art. 'Ritual Law,' in the *Prayer Book Dictionary*, London, 1912; J. W. Joyce, *The Civil Power in its Relations to the Church* ('The Sword and the Keys'), do. 1869, and *Handbook of Convocations*, do. 1887; E. G. Wood, *The Regal Power of the Church*, Cambridge, 1888; W. E. Collins, *The Nature and Force of the Canon Law* (Church Historical Society, no. xxxiv.), London, 1898; J. Robertson, *Statuta Ecclesiæ Scoticanæ*, Edinburgh, 1866.

iii. The constitutions and canons of the Anglican Churches have been published and may be seen as follows: those of England in Blunt-Phillimore as above, and (unrevised) bound up with the older Prayer Books; those of Ireland in *The Constitution of the Church of Ireland*, Dublin, 1909, and the canons are bound up with the Irish Prayer Books; the present canons of the Episcopal Church in Scotland were published in Edinburgh in 1911; for the United States see *Digest of the Canons . . . together with the Constitution, Printed for the Convention*, 1902 [no place mentioned]; the S. African constitution and canons were published at Capetown in 1887. These and the other branches of the Anglican Federation have published their laws locally after each revision of them. The Irish *Constitution* is reprinted every ten years, when the changes made in the interval since the last reprinting are incorporated.

A. J. MACLEAN.

LAW (Egyptian).—No body of Egyptian laws has come down to us, but some kind of written code is probably to be recognized in 'the forty leather rolls' laid before the *wazīr's* judgment-seat in the XVIIIth dynasty (J. H. Breasted, *Ancient Records of Egypt*, Chicago, 1905–07, ii. §§ 675, 712). We have to depend for our knowledge of Egyptian law and its procedure almost entirely on the few royal decrees, business documents, or the like, that happen to have survived on stone or papyrus to represent the varying practices of several thousands of years. It is impossible to give even a meagre sketch of Egyptian law from these materials; a brief enumeration of the documents or groups of documents in order of date may be of service.

1. Old Kingdom.—For the Old Kingdom there is an interesting series of royal decrees conferring immunity from taxation and services of different kinds on particular temples, their personnel, lands, serfs, etc. (K. Sethe, in *GGA*, 1912, p. 705). In the tombs we find concise records of the conditions under which the tomb endowments are entrusted to the *ka*-priests (cf. Breasted, i. §§ 201, 232, etc.). There exists also a papyrus which briefly states a claim made in regard to the property of a deceased man involving guardianship and its denial by the opposing party, together with directions as to how the question should be settled (A. Erman and F. Krebs, *Aus den Papyrus der kōniglichen Museen*, Berlin, 1899, p. 83). A stele records the sale of a house in the presence of witnesses for goods the value of which is reckoned by a fixed standard (H. Sottas, *Étude critique sur un acte de vente immobilière*, Paris, 1913).

2. Middle Kingdom.—From the Middle Kingdom comes a remarkable record of a tomb endowment in the shape of ten contracts made with the priests and necropolis officials of Siut for the benefit of the nomarch's tomb, and the directions given to the single well-endowed *ka*-priest to whom the whole care of the tomb and its services was confided (Breasted, i. § 535). It shows that the Old Kingdom system of appointing an entire staff of hereditary tomb priests had failed. A group of papyri from house ruins give two examples of testamentary dispositions (*amt-per*), census-lists (*uput*) of two households, a *sunt*, or record, of the hire of services and payment to be made, and a statement of a claim before the courts (F. Ll. Griffith, *Kahun Papyri*, London, 1899), and a memorandum in support of the claim to an inheritance (*PSBA* xiv. [1892] 328). The inscription of Chnemhotp (Breasted, i. § 619) shows the king regulating the boundaries of and succession to a nomarch's province. A royal decree (*ib.* § 773) deposes a nomarch for sheltering an enemy, and excludes his descendants from the office for ever.

3. New Kingdom (dynasties XVIII.–XX.).—From the XVIIIth dynasty we have the difficult and fragmentary inscriptions of the duties of the *wazīr* already referred to (Breasted, ii. § 663); the latest treatment of one of the texts, the royal charge to the *wazīr*, is by K. Sethe (*Die Einsetzung des Veziers unter der 18. Dynastie*, Leipzig, 1909). There is also the brief proclamation of a king's accession (Breasted, ii. § 54), the dedication of the city Akhetaton to the Sun-god by the heretic king Akhenaton (*ib.* § 949), a royal gift of lands to an official (*ib.* § 1042), and the edict of Horemheb, being a series of enactments to punish the unjust impositions of tax-gatherers and royal officers (*ib.* iii. § 45). Of documents on papyrus we have group of two *sunt* (hirings of female slaves) and two other documents connecting these with a law-suit (A. H. Gardiner, in *ZÄ* xliii. [1907] 27). Ostraca record a dispute about an inheritance (W. Spiegelberg, *Studien und Materialien zum Rechtswesen des Pharaonenreiches der Dynast. XVIII.–XXI.*, Hanover, 1892, p. 16), and a few other memoranda of law-suits.

From the XIXth dynasty we have the long record of a dispute between cousins regarding the title to some land (A. H. Gardiner, *The Inscription of Mes*, Leipzig, 1905), and the settlement of another dispute about land (Erman and Krebs, *Aus den Papyrus*, p. 84). The international treaty with the Hittite king (Breasted, iii. § 367) must be looked upon as belonging properly to Hittite rather than to Egyptian legal phenomena.

The XXth dynasty has given us a notable series of papyrus records of criminal prosecutions concerning (1) a conspiracy in the royal *ḥarīm* (Breasted, iv. § 416), and (2) the robberies in the Theban necropolis, and especially of the royal tombs (*ib.* § 499); also memoranda of criminal charges against a ship-master (Spiegelberg, in *ZÄ* xxix. [1891] 73). A fragment remains of a royal decree like that of Horemheb (Spiegelberg, *Rechtswesen*, p. 95), and there are some ostraca with records of the division of property to heirs (*ib.* 29, 92).

4. Deltaic dynasties.—(1) *Dynasties XXI.–XXIV.*—At Thebes the virtual will of a high priest of Ammon in favour of his son was cast into the form of a decree of the god himself (Erman, in *ZÄ* xxxv. [1897] 19). A dispute about the ownership of a well in the Oasis of Dakhel was settled by reference to the local god Seth (Breasted, iii. § 725; Spiegelberg, in *RTr* xxi. [1899] 12). A case supposed by Erman to be of summary jurisdiction is now shown to be rather of assassination of persons who knew too much of a State secret (Gardiner, *Journ. of Manchester Egyp. Soc.*, 1912–13, p. 57).

(2) *Dynasties XXV.–XXX.*—With the Ethiopian conquest begins a period when the writing down of contracts appears to have been more and more insisted on. Our collections henceforward furnish a thin stream of legal papyri; and, though it is interrupted at periods of national disaster and disturbance, it tends to increase down to the time when the Egyptian language for such purposes ceased in the 1st cent. A.D. Religion was not so obtrusive in settling legal matters as it had been in the last period, but it was the age of oracles; oaths by the local deity in his temple always played a large part in both criminal and civil cases; and to the end of the reign of Psammeticus I.,

in the early contract papyri, an oath by the king and Ammon was customarily recorded.

All documents of this time which had been published or were accessible to him in original or photograph are enumerated by the present writer in his *Catalogue of the Demotic Papyri in the John Rylands Library*, Manchester, 1909, vol. iii., where the papyri of that collection are also fully translated. They comprise sales of land, houses, temples, priesthoods, funerary offices, and cattle; leases of farms; also contracts of marriage and divorce, of son-ship (adoption), and of servitude. A large and complete papyrus in the Rylands Collection contains an elaborate petition presented to the *wazīr* by a much-injured priest seeking redress and restoration of hereditary rights.

5. **Ptolemaic period.**—After the Macedonian conquest sales of lands and houses and of mummies with their funerary services, mortgages, leases, loans, marriage-contracts, and exculpatory oaths are common, but contracts of divorce, adoption, and servitude are not to be found, nor wills in any form. The native forms are modelled on those that preceded them, and are quite distinct from the flood of Greek contracts being produced in Egypt at the same time (see the above-mentioned *Rylands Catalogue* and numerous publications of papyri by Spiegelberg). The great priestly decrees of Canopus and of Memphis (the Rosetta stone) may also be mentioned here.

6. **Roman period.**—The native legal documents are practically confined to house-sales and mortgages in the Fayyūm of the 1st cent. A.D. See also ETHICS AND MORALITY (Egyptian), § 12.

LITERATURE.—Besides the works specified above, the most recent and therefore best publications of documents include W. Spiegelberg, *Die demotischen Verträge der Papyri Hauswaldt mit einem rechtsgeschichtlichen Beitrag von Josef Partsch*, Leipzig, 1913; O. Gradenwitz, F. Preisigke, and W. Spiegelberg, *Ein Erbstreit aus dem ptolemäischen Ägypten*, Strassburg, 1912. The numerous works of E. Revillout on Egyptian law are too fanciful to be recommended.

F. LL. GRIFFITH.

LAW (Greek).—I. *UNITY OF GREEK LAW.*—Although the Greek world was made up of a great number of commonwealths, each possessing independent laws of its own, and although every allowance must be made for local peculiarities, the leading conceptions of Greek law as a whole may still be considered as a unity. Most of our material, of course, comes from Athens, but Athens, as 'the school of Hellas,' is in a great measure representative of Greece. The Greeks felt very strongly that their customs and laws were peculiar to themselves as a nation, and presented a marked contrast to those of other people (Eur. *Androm.* 174 ff., and Dem. *in Lacritum*, 45).

II. *PERIODS.*—The history of Greek law falls into three principal periods, which may be called the archaic, the classical, and the Hellenistic. In the first, the rules of Greek legal lore are one of the varieties of Aryan tribal customs, which must be studied by the methods of comparative jurisprudence in close connexion with Indian, Italic, Celtic, Germanic, and Slavic law. The second covers roughly the 6th, 5th, and 4th centuries B.C., and is concerned chiefly with the laws and institutions of the autonomous city-States. The third corresponds to the time when Greek conceptions were acting as a kind of leaven in the vast tracts of the East—Asia Minor, Pontus, Syria, and Egypt—through which the Greek population had been dispersed by emigration and the Macedonian conquests.

1. **The archaic period.**—The States of the earliest periods were federations of the clans. Thus in Athens the commonwealth of the Eupatrids was subdivided into four tribes (*φυλή*), each of which consisted of three phratries (*φρατρία*), while each phratry was supposed to consist of thirty kindreds (*γένος*). The chief contribution of this period to Greek law consists in the principles of family law and succession. The community of family interests is symbolized by the hearth (*ἑστία*) as the centre of the household; the estate, which forms the basis of the material subsistence of the household, is the *κλῆρος*, and even in Athens of classical times certain rights and duties were considered as peculiarly attached to this estate (see, *e.g.*, Dem. *in Macart.* 1069 ff., as to the duties of criminal prosecution, corresponding to rights of succession to the *κλῆρος*). For this reason the practice of adoption was as well developed in Athens as in Rome (see art. ADOPTION [Greek]). A special case arose when a person died leaving a daughter to succeed him. She was emphatically 'joined to the estate' (*ἐπίκληρος*), and destined to marry the nearest agnate in order to preserve it. Instances from Athenian practice are quite common, but the custom is also well illustrated by examples from Sparta and Crete (Herod. vi. 57; Code of Gortyn, as to the *πατρωιῶκος*, i. 50 ff.; Dareste, *Rec. des inscr. jur. gr.*, i. 379 ff.; see, further, art. INHERITANCE [Greek]). The wider kindreds were constituted on the agnatic principle, as units organized under a chief (*ἄρχων τοῦ γένους*); but in many respects relationship through females was also recognized. The *ἀγχιστεία*, as the narrower circle of kindred, included all relatives down to the degree of first cousins once removed. The admission of relatives through females by the side of agnates may be explained to some extent by tradition from a period of matrilinear organization, which, according to a popular legend, existed in Athens at the time of Kekrops (Athenæus, xiii. 2 [555]); but it is also connected with alliances between clans (*e.g.*, the case of Kleisthenes the Alkmæonid). The influence of kinship on legal rules is well exemplified by the extensive rights of kinsmen in regard to criminal prosecutions. In cases of homicide, an action (*δίκη φόνου*) had to be brought by relatives of the deceased, and, if the offence amounted to manslaughter, it might be condoned by the relatives (*αἴδεσις*) (Law of Drakon; Dareste, *Inscr. jur. gr.*, ii. 1) and compensation given by the slayer to the kindred. The family authority of the father over the children and of the husband over the wife appears in Greek as well as in other Aryan laws; but it is not so drastically expressed as in the Roman system. The father is not the absolute ruler of the household, but, as it were, a party to an implied compact, providing protection and education for his children, and entitled to support from them in return (*γηροβοσκία*).

2. **The classical period.**—(*a*) *General characteristics.*—In this period we must be careful to distinguish between oligarchic and democratic political principles. Aristotle (*e.g.*, *Pol.* vii. [v.] 1309*a*) often calls attention to the fact that the laws assumed a different aspect according to the system of government which was in force. The ideal of oligarchy is government by a small number of equals (*ὁμοῖοι*), though in practice many inequalities may arise (*Pol.* ii. 9. 1270*a*); the tendency of democracy, on the other hand, is to give freer scope to individual liberty of judgment and action (*Pol.* viii. 1317*b*, 3; cf. the funeral speech of Perikles [Thuc. ii. 39]). In Athens, we are dealing with a system which, more than any other, embodied these democratic principles.

(*b*) *The Athenian system.*—Athenian law of the classical period was essentially a popular, not a technical, body of rules. It represents the most striking experiment in history to administer law according to the standards of the 'average man' as to equity and justice. The commissions of heliasts, the sworn judges of the courts (*δικαστήρια*),

numbered some 200, 500, or 1000 citizens, who had to decide by vote after hearing the pleadings, but without previous debate among themselves. In these circumstances, no doubt the action of the tribunals was often extremely capricious and swayed by merely emotional considerations (*e.g.*, Lykurgus, *in Leocharem*; cf. Wyse's *Isæus*, *passim*). But the real wonder is not that these defects existed, but that in spite of them the administration of justice was of such a kind as to produce not only fine oratory, but remarkable juridical ideas.

(*c*) *Nature of law.*—The Greeks set a very high ideal to the State; its aim was not merely negative—to provide order and security for its members—but positive—to ensure the welfare of the individual. The policy might be called a cultural socialism—*οὐ μόνον τοῦ ζῆν ἕνεκα, ἀλλὰ τοῦ εὖ ζῆν* (cf. Plato, *Legg.* xi. 923 A). Thus the State was regarded as being primarily an educational and cultural institution. To the attainment of its ideal, the laws were the chief instrument: they provided a *παιδείαν πρὸς τὸ κοινόν* (Arist. *Eth. Nic.* v. ii. 11). Their object was to embody the eternal justice (*δικαιοσύνη*); and it is characteristic of the Greek conception that there is no term in the language equivalent to the Latin *ius*, the expression *τὸ δίκαιον* meaning not only 'the lawful' but 'the just.' Hence the archaic conception of law was that it was essentially sacred in its origin, being the gift of the gods to men (see passage from Dem. *adv. Aristogeitonem*, quoted *Dig.* I. iii. 2), the concrete expression of a universal and immutable *δικαιοσύνη* (cf. Herakleitos, fr. 114; H. Diels, *Herakleitos von Ephesus*[2], Berlin, 1909, p. 44); and hence the view, which frequently recurs in the orators, that the most ancient law is the best (*e.g.*, Isok. *Περὶ τῆς Ἀντιδόσεως*, 82). In the classical period, however, this ancient idealistic view was subjected to searching criticism. The 5th cent. was a time of great fermentation, when, as Thucydides says, 'men believed nothing but that nothing was secure' (iii. 83); a growing acquaintance with new countries and peoples impressed the Greeks vividly with the diversity of national ideas and customs (Herod. iii. 38); the great catastrophes of the Persian and Peloponnesian wars produced a distrust of settled institutions; and, lastly, the development of philosophical theories led to a marked assertion of individualism. The general result was an acute realization of the relativity of all human affairs, which in practical life acted as a powerful social dissolvent. It became a common contention that law was merely the product of force, or an arbitrary and artificial arrangement which superior persons were entitled to disregard (Thrasymachos and Glaukon in the *Republic*, Kallikles in the *Gorgias*). In the domain of jurisprudence the great problem was to determine how far the fundamental laws could be considered as ingrained in the nature of man, and how far they were merely subjective and factitious. It was the Sophists who chiefly canvassed this question, but the inquiry did not by any means originate with them; it appears as early as Demokritos, who first sets up the antithesis between *φύσις*, or that which exists by nature, and *νόμος*, or that which exists by convention (fr. 1; cf. Archelaus, *ap.* Diog. Laert. ii. 4, and Hippolytus, *ap.* H. Diels, *Doxographi Græci*, Berlin, 1879, p. 564). This principle of relativism runs throughout all the speculation of the Sophists, and, as is well known, reached its highest point in Protagoras. But a justification had to be provided for positive law; even the Sophists had to recognize the fact that society and law continue to exist in spite of the divergent tendencies of individualism. This was to be explained, they said, by the social instinct: man is led by nature to evaluate his own actions—hence the feeling of shame (*αἰδώς*)—and at the same time to strike a balance between conflicting rights—hence justice (*δίκη*) (Plato, *Protag.* 322 B). How was this to be reconciled with relativism? According to Plato, Protagoras held that the laws were the result of conventions imposed by each city according to its own particular standards (*Theæt.* 172 A, B). It was useless to dispute concerning the truth of these different views of law; but the event would show which of them was useful and which not. In this system, therefore, individualism is supplanted by pragmatism. The doctrine of the *δόξα τῆς πόλεως*, fully developed by Protagoras, remains one of the corner-stones of Sokrates' teaching. The citizen who has been nurtured by the *πόλις*, and chooses to remain in it, must abide by its decrees; at the same time, freedom must be allowed to individual thought, and Sokrates was optimistic as to the ultimate triumph of right knowledge in politics and jurisprudence as well as in science; his standard for the examination of laws is a logical standard, and his method necessarily dialectical. Plato follows upon much the same lines as Sokrates. The *δόξα τῆς πόλεως*, in his view, means that the State, not the individual, is to set the standard of morals and law; justice is 'writ small in the individual and writ large in the State' (*Rep.* ii. 368 ff.). Its essence is the distribution of rights and duties on the principle of not meddling with the concerns of others (*Rep.* iv. 433 A). The privileges of each class of the community—thinkers, fighters, and workers—must be strictly proportionate to its responsibilities. It is, unhappily, not any existing State, but only an ideal commonwealth, that is equal to the task of setting and maintaining the standard of justice (*Rep.* vii. 519). Aristotle sums up the preceding theories concerning the justification of positive law, and gives the famous classification which divides the subject under the heads of 'justice in general' (*τὸ δίκαιον καθ' ὅλου*) and 'justice in particular' (*τὸ δίκαιον ἐν μέρει*). The latter is further subdivided into justice which is distributive (*διανεμητικόν*) and legal redress (*διορθωτικόν*). Justice in general deals with moral precepts brought under the cognizance of the State by its laws (*τὸ νόμιμον*), while justice in particular deals more especially with equality (*τὸ ἴσον*). As to the distribution of rights and duties, it has to find its standard, not in absolute equality, but in proportion (*κατ' ἀναλογίαν*), which is taken as geometrical proportion. Men must claim rights in accordance with their standing and their duties. Legal redress is directed to determining rights which may be in dispute, and giving compensation for material and moral injuries. Besides giving these categories of justice, Aristotle dwells on the necessity of correcting general rules according to the circumstances of particular cases; this forms the sphere of *ἐπιείκεια* (see below) (*Eth. Nic.* v. ii. 8, 10, iii. 7, iv. 2 f., v. 1).

(*d*) *Sources of law.*—Let us now consider how these jurisprudential principles were embodied in the practice of law. (1) *Enacted law.*—The most important source was written or formulated enactment. The sovereign people did not care to entrust the administration of justice to the independent judgment of magistrates and officers: the 'rule of law' was fully recognized by Athenian democracy (*e.g.*, Isok. *Panath.* § 138). As soon as the authority of *νόμος* was usurped by popular decree (*ψήφισμα*), democracy, said Aristotle, was undermined (*Pol.* vi. 4. 1292*a*, 27 f.). Elaborate precautions against hasty legislation were taken by means of the *γραφὴ παρανόμων*, oaths and penalties (Hyperides, *Philipp.* §§ 4, 6; Dem. *adv. Aristoc.*

86). (2) *Customary law.*—Nevertheless, there was also a vast body of customary law, which was mainly passed on to democracy by the preceding period, since only a few of the rules as to procedure and substantive law were actually promulgated as θεσμοί (Arist. *Ath. Pol.* iii. 4). Sacral law in general remained uncodified; ancestral customs (τὰ πάτρια) were recognized as a definite and sacred source of legal rules, and as such were interpreted by the exegetæ (Dem. *in Euergum*, p. 1160, § 68 f.). The ancient jurisdiction of the archons, and that of the Areopagus, until the reforms of Perikles and Ephialtes, were also largely concerned with traditional usages. (3) *Precedent.*—Precedent was never regarded as binding on the Athenian courts, but various kinds of non-litigious custom—*e.g.*, in dowry, commercial practice, maritime law, and forms of pleading and conveyancing employed by the professional scribes (γραμματεῖς) of the courts together with various forms of executory agreements (cf. Dareste, *Inscr. jur. gr.*, i. 318)—tended to establish precedents; and, in general, existing decisions had at least a symptomatic value, as showing the prevailing views and tendencies of popular courts (cf. Dem. *in Dionys.* 48). (4) *Natural law.*—Though in the orators and philosophers there are many indications of an 'unwritten law' (νόμος ἄγραφος) which is founded on instincts of human nature (Arist. *Rhet.* I. x. 3), the theory of a transcendent law of nature was not erected into a positive juridical doctrine. It appears most forcibly in the poets (*e.g.*, Soph. *Antig.* 454), though it was sometimes appealed to in actual litigation (Lysias, *in Eratosthenem*, § 2). (5) *Equity.*—A conscious juristic theory of the law of nature was rendered unnecessary by the conception of ἐπιείκεια, which gives a peculiar colouring to the whole system of Greek law. It amounted in practice to a liberal interpretation and application of legal rules. Although the oath of the heliasts enjoined them to frame their decisions according to their consciousness of justice (γνώμῃ καὶ δικαιοτάτῃ) only where there was no definite law to go by, in practice popular tribunals took great liberties in the application of existing laws. To some extent this was made necessary by the archaic origin and obscure expression of many fundamental laws (Arist. *Ath. Pol.* ix.). Wills and contracts provided fruitful material for such discretionary justice.

(*e*) *Distributive justice.*—The principle of the distribution of rights and duties, so characteristic of the Greek legal system, was by no means confined to theory, but was very definitely asserted in practice. Privileges and burdens were dispensed according to what the individual did and could contribute to the common stock. Military service, taxation, and the liturgies—*i.e.* public services such as the fitting out of ships, providing choruses for dramatic performances, etc.—were all regulated upon this basis. Those who considered themselves unfairly burdened by the very heavy requirements of the liturgies might resort to the ἀντίδοσις. A citizen who had been called upon to perform a liturgy might claim that another was better able to undertake it than himself, and demand that he should either do so or exchange properties (Dem. *in Phœn.*; Isok. Περὶ τῆς Ἀντιδόσεως). Similarly, if a citizen had been exempted from public burdens or granted a subsidy, he might be called upon to defend his privileges (Lysias, *Or.* xxiv. § 6 f.). The law of property in Athens never developed on such rigid lines as in Rome. There was no theory of absolute ownership. The κλῆρος was primarily the thing which was 'allotted' to the individual, but a kind of 'eminent domain' was reserved to the commonwealth. Therefore the typical action for the recovery of property was the διαδικασία, which was not a claim for absolute title, but only for guaranteed possession. Expropriation and interference with contracts were practised with a disregard for private right which is startling to modern notions (*e.g.*, legislation in Ephesus at the time of the Mithridatic war [Dareste, *Inscr. jur. gr.*, i. 22]).

(*f*) *Wrong and crime.*—We distinguish in the Greek theory of wrong and crime three elements which call for juridical treatment. (1) The first is that of redress. 'Damages,' in Aristotle's scheme, are not merely compensation, as in modern theory, but an equation of the loss to the party wronged (ζημία) and the gain to the wrongdoer (κέρδος). All wrongs are considered chiefly from the personal point of view. There is no sharp cleavage between the private action (δίκη) and the public action (γραφή); as a transitional form, the δίκη κατά τινος, a private action for crime, is distinguished from the δίκη πρός τινα, a purely private suit. As for the assessment of damages, the contending parties presented rival valuations between which the court had to decide. (2) The element of public reprobation assumes a religious form. Bloodshed, *e.g.*, was a pollution which excited the wrath of the Erinyes and the Olympian gods, and must be cleansed by religious purification. Hence even in classical times all actions of homicide were tried in temples, and even an inanimate object which caused the death of a human being was solemnly judged and sentenced before the hearth of the government (Prytaneum). Hence also the importance which was attached to orthodoxy: impiety, which was taken to include professions of free thought, was indictable by the γραφὴ ἀσεβείας (*e.g.*, the case of Sokrates). (3) How far was it recognized that in every crime there is a revolt of the individual will against the supreme will of the community? There are many indications that the Greeks were conscious of this element in crime, *e.g.*, Isok. *c. Lochitem*, § 7). They were not concerned with problems of individual free will in the theory of punishment. In view of the predominance of the commonwealth over the individual, punishment itself often took the terroristic form of actual extermination and intimidation. Demokritos puts the criminal on the same plane as a wild beast (frags. *ap.* Stob. *Flor.* xliv. 16, 18, 19), and Plato unequivocally states the necessity of removing obnoxious members of the body politic by means of capital punishment (*Legg.* 862). The social effect of intimidation was one of the leading principles of Protagoras's theory of law, and Plato fully endorses the view of the great Sophist that the object of punishment is not revenge for what, after all, cannot be undone, but the prevention of similar offences in the future (*Protag.* 324B).

3. The Hellenistic period.—It is impossible to enter in detail upon the discoveries which the recent researches of papyrologists and epigraphists have made in the Greek law of this period, especially that which prevailed in Egypt. One of its most remarkable features was the personification of the State in the king (the Pharaoh; cf. art. KING [Egyptian]), and the subjection of all juridical relations to the fiscal point of view. Under the rule of the Ptolemys, *dominium* was vested in the monarch, and private property in land amounted only to a species of leasehold (γῆ ἐν ἀφέσει), while the cultivation of State domains (γῆ βασιλική), and, later on, of all taxed land, was ensured by every means, including a compulsory distribution of plots (ἐπιβολή) among peasant farmers. In the ascription of the peasantry (δημόσιοι γεωργοί) to the crown lands we find the germs of the doctrine of local origin which played such a large part in the later Roman Empire. In Asia Minor, under the Seleucidæ, there was even a class of tenants, called

λαοὶ βασιλικοί, whose status may be described as 'ascription to the glebe' (Rostowzew, *Gesch. des röm. Kolonates*, p. 256 ff.).

LITERATURE.—Some of the original texts of Greek law have been preserved for us in inscriptions—*e.g.*, the laws of Gortyn in Crete, and Drakon's law as to homicide in a copy made in 409–408 B.C. A selection of texts and of legal instruments of different kinds, with an excellent commentary, is presented in the *Recueil des inscriptions juridiques grecques*, ed. R. Dareste, B. Haussoulier, and T. Reinach, Paris, 1892–95. Other collections are W. Dittenberger, *Sylloge Inscriptionum Græcarum*, 3 vols., Leipzig, 1898; *CIG*, Berlin, 1873, etc.; H. Collitz and F. Bechtel, *Die griech. Dialekt-Inschriften*, Göttingen, 1883 ff.; P. Cauer, *Delectus Inscriptionum Græcarum*, Leipzig, 1883; E. S. Roberts and E. A. Gardner, *Introduction to Greek Epigraphy*, Cambridge, 1887–1905. As to laws and acts preserved in papyri, see L. Mitteis and U. Wilcken, *Grundzüge und Chrestomathie der Papyruskunde*, Juristischer Teil, Leipzig and Berlin, 1912. A rather antiquated collection of the principal notices as to Athenian law is that of J. B. Télfy, *Corpus Juris Attici*, Budapest and Leipzig, 1868. The speeches of Attic orators pleading before the Courts afford, of course, a copious source of information; see especially the speeches of Demosthenes, and also the translations, with instructive notes and appendices, by C. R. Kennedy, of orations against Leptines, Meidias, etc. (London, 1877), orations against Timokrates, Aristogeiton, etc. (do. 1871), and Select Speeches (Cambridge, 1841); R. Dareste, *Les Plaidoyers civils de Démosthènes*, 2 vols., Paris, 1875; *The Speeches of Isæus*, ed. William Wyse, Cambridge, 1904, with a commentary remarkable for its learning and acumen as well as for its exaggerated criticisms of Athenian legal practice; R. Dareste and B. Haussoulier, *Les Plaidoyers d'Isée*, Paris, 1898; and the speeches of Antiphon, Andokides, Lysias, Isokrates, Deinarchus, Lykurgus, Æschines, and Hyperides. The lexicographers—Harpokration, Hesychios, Pollux, etc.—have preserved many fragments of Greek laws. In the writings of the philosophers there is much information about Greek doctrines of jurisprudence; see especially Xenophon, *Memorabilia*; Plato, *Republic*, *Laws*, *Protagoras*, *Gorgias*, *Theætetus*; Aristotle, *Ethics* (particularly bk. v.), *Politics*, *Rhetoric*, *The Constitution of Athens*, and other fragments of the work on *Constitutions* (πολιτεῖαι). Theophrastos's treatise on laws has been lost, with the exception of one or two fragments.

General works on Greek law are R. Dareste, *Nouvelles Études d'histoire du droit*, Paris, 1889, *La Science du droit en Grèce*, do. 1893; T. Thalheim, *Die griechischen Rechtsalterthümer*, Freiburg i. B. and Tübingen, 1884; B. W. Leist, *Altarisches Jus Civile*, Jena, 1892–96, *Altarisches Jus Gentium*, do. 1889; Fustel de Coulanges, *La Cité antique*[3], Paris, 1870.

On the general jurisprudence of the subject: R. Hirzel, *Themis, Dike und Verwandtes*, Leipzig 1907; K. Hildenbrand, *Geschichte und System der Rechts- und Staatsphilosophie*, do. 1860; R. L. Nettleship, *Lectures on the Republic of Plato*, London, 1898; G. Grote, *Plato and the other Companions of Socrates*, do. 1875, and *Aristotle*, do. 1872; T. Gomperz, *Griechische Denker*, Leipzig, 1896–1909, Eng. tr., London, 1901–12; M. Voigt, *Die Lehre von Jus Naturale, Æquum et Bonum, und Jus Gentium der Römer*, Leipzig, 1856, vol. i.; and general works on the history of Greek philosophy by E. Zeller, W. Windelband, F. Ueberweg, R. Heinze, etc.

Procedure and judicial organization: M. H. E. Meier, G. F. Schömann, and J. H. Lipsius, *Der attische Process*, Berlin, 1881; G. Gilbert, *Beiträge zur Entwicklungsgesch. des griech. Gerichtsverfahrens und des griech. Rechtes*, Leipzig, 1896.

Public law: G. Perrot, *Essai sur le droit public et privé de la république athénienne*, Paris, 1867; and the handbooks on *Alterthümer* by G. F. Schömann (Berlin, 1861–63), C. F. Hermann (Freiburg i. B., 1882–84), G. Gilbert (Leipzig, 1881–85), G. Busolt (Munich, 1893); Coleman Phillipson, *The International Law and Custom of Ancient Greece and Rome*, London, 1911.

Private law: L. Beauchet, *Histoire du droit privé de la république athénienne*, Paris, 1896; J. Partsch, *Griech. Bürgschaftsrecht*, Leipzig, 1909; E. Caillemer, *Le Droit de succession légitime à Athènes*, Paris and Caen, 1879, and several important articles on sale, lease, etc.

Criminal law: J. J. Thonissen, *Le Droit pénal de la république athénienne*, Paris, 1876; G. Glotz, *La Solidarité de la famille dans le droit criminel en Grèce*, do. 1904.

The law of the Hellenistic period: there are many notes on particular questions in the various editions of Egyptian papyri—*e.g.*, J. P. Mahaffy and B. F. Grenfell, *The Revenue Laws of Ptolemy Philadelphus*, Oxford, 1896; B. P. Grenfell, *Oxyrynchus Papyri*, London, 1907; B. P. Grenfell and A. S. Hunt, *Tebtunis Papyri*, do. 1907; M. Rostowzew, *Studien zur Gesch. des röm. Kolonates*, Leipzig, 1910; S. Waszynski, *Die Bodenpacht*, Leipzig and Berlin, 1905; L. Mitteis, *Reichsrecht und Volksrecht*, Leipzig, 1891; Mitteis and Wilcken, *Grundzüge der Papyruskunde*, Juristischer Teil, Leipzig and Berlin, 1912; *Dikaiomata*, ed. Græca Halensis, Berlin, 1913.

Most valuable contributions on various questions of law are to be found in the great Encyclopædias of Pauly-Wissowa and Daremberg-Saglio; cf. W. Smith's *Dictionary of Greek and Roman Antiquities*[3], London, 1890–91.

PAUL VINOGRADOFF.

LAW (Hindu).—Law in India is closely connected with religion. Thus the so-called Code of Manu contains a great deal more about *āchāra*, 'established practices,' *i.e.* observances of caste, domestic ceremonies, funeral rites, oblations to the *manes* and to the gods, rules of diet, and other religious questions, including purely religious and philosophical discussions, than on the subject of secular laws (see CUSTOM [Hindu]). Hence, after an exordium in the first book on the creation of the world, the four stages in the life of a Brāhman form the principal if not the only subject treated in the 2nd to the 6th book. The 7th book contains the rules of government, including the art of war. The 8th book—the longest of all, it is true—and the 9th are the only ones which deal with law in the proper sense of the word (*vyavahāra*). The last three books (10–12) treat of the duties of the various castes, of penances, and of transmigration. The legal portion of the Code does not amount to more than one-fourth of the whole. Nor do the other law-books (*Dharmaśāstras*) differ from Manu in this respect; most of the Codes do not deal at all with positive law, but confine their attention to penances, purification, and other religious topics. Forensic law is arranged under 18 heads in the Code of Manu (viii. 4–7), viz. non-payment of debt, deposit and pledge, sale without ownership, concerns among partners, resumption of gifts, non-payment of wages, non-performance of agreements, rescission of sale and purchase, disputes between the owner of cattle and his servants, disputes regarding boundaries, assault, defamation, robbery and violence, adultery, duties of man and wife, partition of inheritance, gambling and betting. The *Dharmaśāstra* of Nārada divides the 18 titles into 132 branches. Thus, *e.g.*, the first title, the law of debt, is said to consist of the following 25 divisions: (1) which debts have to be paid, and which not; (2) debts; (3) property; (4) subsistence of a Brāhman in times of distress; (5) modes of proof; (6) lending money at interest; (7) usurers; (8) sureties; (9) pledges; (10) documents; (11) incompetent witnesses; (12) witnesses for the plaintiff; (13) witnesses for the defendant; (14) where no witnesses are required; (15) validity of testimony; (16) false witnesses; (17) exhorting the witnesses; (18) valid evidence; (19) invalid evidence; (20) proceedings on failure of both documents and witnesses; (21) ordeal by balance; (22) ordeal by fire; (23) ordeal by water; (24) ordeal by poison; (25) ordeal by sacred libation. It appears that the law of evidence and judicial procedure, including ordeals, in general is here mixed up with the law of debt, pointing thus to the special importance of debt which may be considered the principal reason for going to law in a primitive state of society. A creditor is, however, allowed to recover a debt from his debtor privately, by force or by fraud. The rate of interest is extremely high; it is generally paid in kind.

As regards deposits, we can understand that the insecurity of property led to the entrusting of valuable articles for safety to the keeping of others. The habit of concealing such articles somewhere accounts for the prominence of the subject of treasure-trove in the Indian law-books (see TREASURE-TROVE [Hindu]). All purchases and sales are to be effected in open market, secrecy being considered a sign of dishonesty. The public fixing of market rates and the enforcement of them correspond to modern practice. When a man repents of a bargain, he is at liberty to annul it within ten days. The rules regarding concerns among partners refer, particularly, to societies of priests; and by 'gifts' are meant, in the first place, religious gifts to Brāhmans (see GIFTS [Hindu]). A herdsman is to receive a tenth part of the milk of his cows in place of wages. The detailed rules regarding the boundaries of fields

show that the arable land was already held in severalty.

In the family laws, the institution of marriage is improved by prohibiting purchase of a wife, and declaring a contract of marriage, if once concluded, to be irrevocable. Nevertheless, the position of women is one of absolute inferiority to the male sex. Thus a wife is liable to be chastised by her husband; and, even when he is unfaithful to her, she must worship him like a god. A woman is declared to be never fit for independence, and has to live under the perpetual tutelage of her father, husband, and sons. Polygamy is allowed, and seems to have been very common in rich and noble families. Infant-marriage is recommended, and the re-marriage of widows prohibited or discouraged. As regards proprietary right (*strīdhana*), women are said to be incapable of holding any property (except their *strīdhana*, or peculiar property); nor can they inherit, under the early law of succession at least, which was subsequently modified so as to let the widow in as an heir, with certain restrictions, on failure of male posterity. All family property is supposed to be held in common by a sort of joint ownership (joint family), the father or manager being regarded as a head partner. The family members are kept together by the sacred oblations offered in common by its living head to its deceased members (see INHERITANCE [Hindu]). After the father's death the sons divide his property equally, or with a specific deduction for the eldest son; or the eldest succeeds to the whole estate, the others living under him as under their father. Twelve different kinds of sonship are recognized, each of the secondary sons succeeding in default of his superior in rank, whilst the real legitimate son excludes them all from inheriting. The passages in the law-books extolling the possession of a son for spiritual purposes, as saving his father from hell, generally relate to the real legitimate son. The gross usages relating to the affiliation of the subsidiary sons were discouraged by the legal writers, and no doubt the existence of these usages throws an unfavourable light on the constitution of the family in ancient India. Thus there is the *kṣetraja*, or son begotten by levirate (*niyoga*); the *gūdhaja*, or secretly born son of an adulterous wife; the *sahodha*, or son of the pregnant bride; the *kānīna*, or unmarried damsel's son; the *krīta*, or purchased son; the *apaviddha*, or deserted son. The more recent writers do not acknowledge as legitimate in the present age of sin (*Kaliyuga*) any but the true son, procreated in lawful marriage (*aurasa*), and the adopted son (*dattaka*) (see ADOPTION [Hindu]). There is diversity of opinion as to whether a widow may be allowed to adopt, with the assent of her husband given shortly before his death, this being the only case in which a sort of testamentary power of the owner of property is recognized. A father may, indeed, distribute his property among his sons during his lifetime; but, in doing so, he can exercise discretion only as to his self-acquired property, the ancestral property being held by father and sons in common, according to the joint-family principle.

Passing to criminal law, we find the suppression of crime recognized as a sovereign and a sacred function. There are hardly any survivals left of the right of private war and of the *wergild* (see BLOOD-FEUD [Hindu]). The removal of thorny weeds (*kaṇṭakaśodhana*), *i.e.* the suppression of criminals, is regarded as one of the principal duties of a ruler. Legal offences are also moral sins, and kings, by punishing the wicked and protecting the virtuous, obtain their own absolution. Punishment is personified as a god (see CRIMES AND PUNISHMENTS [Hindu]). A king in whose dominions there are no thieves, adulterers, calumniators, robbers, murderers, (after death) attains the world of Indra. Abuse, assault, theft, violence, including manslaughter and robbery, and sexual crimes, such as adultery, rape, seduction, and forbidden intercourse, are regarded as the five principal crimes. Theft and robbery seem to obtain special attention. A thief appearing before the king with flying hair, holding a club in his hand, and proclaiming his deed, is purified of his guilt, whether he be slain or pardoned; but, if the king does not strike, the guilt falls on him. Cattle-lifting appears to have been specially common, and the village to which the robbers were tracked was made answerable. The principle thus laid down has remained an effective part of the law down to our day, and elaborate rules are still in force in Kāthiāwār for following up the track from village to village, the Talukdar of the last being held primarily responsible. Stolen property in general must be restored by a king to its owner, according to Manu; and a ruler is even bound to make good the loss occasioned by his negligence. The king is required to cause taverns, shops, festive assemblies, old gardens, forests, and other places of retreat to be guarded by companies of soldiers, in order to keep away thieves, and to find out thieves with the aid of clever reformed thieves, and destroy them. The notion of theft and robbery is extended very far, so as to include cheating of every sort, forgery, bribery, jugglery, dishonest dealing in judicial proceedings, false gambling, etc. To steal gold belonging to a Brāhman is regarded as particularly punishable; but it is in the law of abuse and assault, of homicide, and of adultery, that the gradation of punishments according to the caste of the offender and of the offended comes out most clearly. Thus a low-caste man must suffer death for an intrigue with a guarded Brāhman woman, as a safeguard of caste purity, whereas adultery with a woman of inferior caste is punishable only with a fine. Fines are inflicted equally on Kṣatriyas and Vaiśyas who defame one of a higher caste, while the Śūdra offender incurs corporal punishment. Fines are the most common form of punishment, but there are many other forms (see CRIMES AND PUNISHMENTS [Hindu]). Barbarous cruelty, the prevalence of the *lex talionis*, and want of system characterize the Indian as well as other primitive codes. Death is prescribed by Manu for aggravated theft, for harbouring robbers, swindling, and kidnapping, for certain cases of adultery and insult—in short, for a great many more crimes than under more balanced systems. Death by torture was the punishment of a dishonest goldsmith, and mutilation that of the destroyer of a boundary-mark—which shows how great was the alarm at their offences. When we find that a red-hot iron spike ten fingers long is to be thrust into the mouth of a low-born wretch for reviling a Brāhman, we are reminded that the composers of these law-books were Brāhmans. Although the judges, like the jurists, were generally Brāhmans, it appears doubtful whether the privileges claimed by the sacerdotal class and incorporated with legal rules were actually accorded to them. Many of their rules belong to the moral sphere, and go beyond what we recognize as the proper province of the penal law. Excessive drinking is punished as a crime in itself, not only as a breach of public order. Gambling is viewed in the same light. There are rules for securing chastity and sexual purity. Hospitality is considered a duty to be enforced by law in certain cases. The practice of magic rites and incantations meant to destroy life is punishable by a fine. Every one must be strictly kept to the employment of his own caste. Matrimonial duties and family relations are elaborately regu-

lated. The proper province of moral obligations and delinquencies, however, is the ecclesiastical law, with its long lists of offences and religious penances and austerities (see EXPIATION AND ATONEMENT [Hindu]). Punishment and penance may be combined, as when the slayer of a milch-cow or of a bull (these being sacred animals) has to pay a fine first and do penance afterwards, or when, in cases of sexual criminality, the king inflicts punishment and the sin committed is expiated by a penance. Should an offender fail to perform the penance prescribed for his offence, he is at once expelled from his caste by the ceremony of *ghaṭasphoṭa*, 'the breaking of the water-pot'—a ceremony which is performed down to the present day in such cases. Punishment by itself is also supposed to have a purifying effect, as in the above-mentioned case of a thief who appears before the king of his own accord and is struck down by him.

Judicial procedure is simple and patriarchal. It presents the open court method of investigating accusations for crime, the king, attended by learned Brāhmans, entering his court of justice every morning, and there, after having seated himself on the judgment-seat and having worshipped the gods, undertaking the trial of the causes brought before him. The king has to fast for one whole day if a criminal deserving punishment is allowed to go free, and for three days if an innocent man is punished. The more recent law-books mention a number of other members of a court of justice besides the king—the king's domestic priest, his chief judge, who may also represent him if absent, his ministers of State, the assessors of the court, who are required to state their opinion of the case unreservedly and in accordance with the dictates of justice, the accountant, the scribe, the beadle. Gold and fire are used in the administration of oaths and ordeals, and water for refreshment. In giving a decision, the king must attend to local usage, written law, and the practice of the virtuous, if not opposed to local, family, or caste usages. Villages, tribes, and castes have also tribunals of their own, corresponding to the modern Pañchāyats; but from these an appeal to the king is possible. There is no essential difference between the trial of civil and criminal suits, except perhaps that the character and other qualifications of a reliable witness are not examined so strictly in criminal cases as in civil ones, and that the defendant in a criminal case cannot be represented by a substitute. The litigants must always be heard in person, and the king or the judge watches their countenances and their conduct carefully. Witnesses are watched in the same way, the depositions of witnesses being regarded as the most important part of the evidence. Certain persons are not admissible as witnesses on account of their personal relations with the litigant parties, or on account of age, dignity, sex, devotion to religion, moral or personal defects. There are also some provisions as to the number of witnesses, as that there shall not be less than three. In the event of a conflict of testimony, that of the majority generally prevails. The witnesses are solemnly adjured to speak the truth; and, if they should happen to meet with a calamity within seven days after making their deposition, this is held to prove its falsehood. Perjured witnesses are severely punished, and have to endure fearful pangs in a future existence, and destroy their own relatives through their wickedness. Perjury, however, is tolerated where an accused person may be saved from death by it.

The later law-books give special prominence to documents, and make written prevail over oral evidence, the plaint and the answer of the defendant having, likewise, to be stated in writing. The trial is to be conducted discreetly and skilfully, for liars may have the appearance of veracious men and veracious men may resemble liars, or documents may be forged. If human proof should fail, divine test is to be resorted to, of which there are many kinds, such as the water and fire ordeals, the ordeal by poison, the ordeal by hot metal (a gold coin has to be taken out of a vessel filled with boiling oil and butter), the ordeal by drawing lots, and the ordeal by sacred libation. The deities are invoked to supervise these proceedings, and are believed to establish the innocence or guilt of the accused. In less important cases, oaths are to be administered, the accused swearing by the head or feet of a Brāhman, or of his wife or son, or of an idol, and his innocence being established if within a certain period he should not meet with an extraordinary calamity, such as an illness, or the loss of a son or of his fortune. The custom of performing ordeals has survived down to very modern times; and oaths by an idol, a Brāhman, etc., are even now in vogue, an accident happening to the person afterwards being considered to prove his guilt. The decision of the judge in a suit is to be stated in writing, and a copy of it is to be handed to the victorious party. 'When lawsuits are decided properly, the members of the court are cleared from guilt. But where justice, wounded by injustice, approaches, and the judges do not extract the dart, then they also are wounded by that dart of injustice' (Nārada, p. 17; Manu, viii. 12).

The sources of the sacred law, according to Manu (ii. 6, 12), consist of the whole Veda, the *Smṛti*, or tradition, the customs of holy men, and self-satisfaction (where there is no other guide). The four Vedas, together with auxiliary literature, all of which is believed to be eternal and inspired, are confined to the consideration of religious rites, and contain very little about secular law, though they are considered the fountainhead of the whole law. *Dharmaśāstras* or *Smṛtis* are the real sources of law from a legal point of view. The term *Smṛti* means literally 'recollection,' and is used to denote a work or the whole body of Sanskrit works in which the sages of antiquity set down their recollections of the divine precepts regarding the duty of man. In reality, the earliest law-books were composed in and for the Brāhmanical schools studying the various parts of the Veda, and have been preserved as portions of the manuals of Vedic lore used in those schools, or as independent works. Such compositions are the *Dharmaśāstras* or *Dharmasūtras* of Āpastamba, Baudhāyana, Gautama, Vasiṣṭha, Viṣṇu, and some others. They are composed in the aphoristic Sūtra style, either entirely in prose or, more usually, in mixed prose and verse. Some of these works are supposed to have been written in the 5th or 6th cent. B.C., or even earlier, but they may have undergone many changes since then. Their contents are mainly religious, but the positive law is also treated in them, and they are very useful for tracing the gradual development of legal institutions in India.

From these aphoristic treatises we pass to the versified works, composed in the *śloka* metre, such as the celebrated Code of Manu, the Magna Charta of Brāhmanism; the Code of Yājñavalkya, distinguished for its concise and systematic treatment of the whole law, in three books, on *ācāra*, *i.e.* religious rites and duties, *vyavahāra*, *i.e.* jurisprudence, and *prāyaścitta*, *i.e.* sins and their atonement; and the Code of Nārada, unique in its being confined to jurisprudence alone, which it treats with great fullness of detail. The opening verses of the Code of Manu narrate how Manu, the descendant of Brahmā, gave the great sages an account of the creation, and afterwards transferred the task of expounding the Institutes of the Sacred Law, which he had learned from Brahmā,

to Bhṛgu, one of his ten mind-born sons. There is an ancient proverb that 'all Manu said is medicine,' and another maxim stating that 'a *smṛti* or rule of law that is opposed to the sense of Manu's Institutes is not approved.' The great number of learned Commentaries composed on the Code of Manu, from the 8th or 9th cent. downwards, also testifies to the very particular authority early assigned to this codification of the religious and secular law, which may have originated in the first centuries A.D., if not earlier. There are also many *Smṛtis* which have not been preserved in a separate and complete form, and are known to us only from the passages of law cited in the Sanskrit Commentaries and Digests; but the authenticity of these texts is somewhat doubtful. The mythological poems called *Purāṇas* are also cited a great deal, particularly on the subject of vows, gifts, and other parts of the religious law, though they are said to be inferior in authority to the *Smṛtis*. The Commentaries and systematic works on law, being posterior in time to the *Smṛtis* and *Purāṇas*, have gradually come to supersede them in authority, especially the celebrated *Mitākṣarā*, a Commentary on the *Smṛti* of Yājñavalkya composed by the ascetic Vijñāneśvara, *c.* A.D. 1100, at Kalyāṇapura, in the Deccan. The *Smṛtichandrikā* of Devaṇṇa-bhaṭṭa, the *Sarasvatīvilāsa* of king Rudradeva, the *Vīramitrodaya* of Mitramiśra, the *Mayūkhas* of Nīlakaṇṭha, and other learned compositions are used concurrently with the *Mitākṣarā* in the several provinces; in Bengal alone the *Dāyabhāga* of Jīmūtavāhana has superseded the *Mitākṣarā* as far as the law of inheritance is concerned. Customs which are, like written codes, considered a source of law have to a certain extent been embodied in the codes. Recent collections of customs were instituted by the British Government—*e.g.*, A. Steele, *The Law and Customs of Hindu Castes*, London, 1868; C. L. Tupper, *Punjab Customary Law*, Calcutta, 1881; C. Boulnois and W. H. Rattigan, *Notes on Customary Law as administered in the Courts of the Punjab*, Lahore, 1876.

Monier-Williams, *Indian Wisdom*[3], London, 1876; R. West and G. Bühler, *A Digest of the Hindu Law*[3], Bombay, 1884; J. D. Mayne, *Hindu Law and Usage*[6], Madras, 1900; G. Sarkar, *Hindu Law*[2], Calcutta, 1903; V. N. Mandlik, *Hindu Law*, Bombay, 1880; J. C. Ghose, *The Principles of Hindu Law*, Calcutta, 1903; J. Jolly, *History of the Hindu Law*, Calcutta, 1895, and *Recht und Sitte* (=*GIAP* ii. 8), Strassburg, 1896.

J. JOLLY.

LAW (Iranian).—The term *daēna*, the later *dīn*, which is commonly and conveniently translated 'law,' is perhaps the most characteristic and best known term in the Avestic system. It also indicates the religion itself; in fact, in accord with the entire mentality of the ancient Iranians, as of so many other Eastern peoples, there was no distinction between religious and civil law. Another term which may be translated 'law' is *dāta*, and in the Pahlavi treatise, the *Dīnkarṭ*, we read the assertion, *Āīrāno dāṭo dīno Māzdayasno* (*Dīnkarṭ*, ed. Peshotan B. Sanjana, Bombay, 1874ff., ch. 28), which we may render, 'the Mazdean religion is the law of Irān.' As Geiger remarks, it is highly probable that with the ancient Iranians, as with other Indo-European peoples, the early form of judicial process was the simple one of a village council of elders. His surmise, that in the word *vīcira* (the origin of the modern Persian *vazīr*, or, as we say, 'vizier') we have a Gāthic term for 'judge,' does not seem to be tenable, although *vīcira* certainly bears the meaning of 'deciding.' In the later Avesta the term *ṭkaēsha*, sometimes with the qualificative *dātōrāza*, 'giving or administrating law' (*Ys.* ix. 10), certainly indicates the judge. In the passage just quoted it is especially applied to Urvākhshaya, the son of Thrita, who is considered apparently as a kind of Iranian Numa. According to Geiger's view, the priestly code, which we know as the *Vendīdād*, represents only that portion of legislation 'in which the priesthood reserved for themselves jurisdiction, or else added ecclesiastical penalties to those of the secular tribunal.' There are distinct traces in the Avesta of blood *vendetta*, and, still more, of *wergild*; indeed, the prescriptions for the latter are fairly full (see *Vend.* iv. 44). Such usages were no doubt pre-Zoroastrian. The legislation contained in the *Vendīdād*, agreeably with the underlying principles of the system, does not make any real distinction between what we should call civil jurisprudence and religious or ritual law. If we accept J. H. Moulton's theory of the Magian element in later Zoroastrianism (*Early Zoroastrianism*, London, 1913, lectures vi., vii.), then the whole ritual legislation must be attributed to this, as he maintains, non-Aryan race. In the code, however, moral, ritual, and civic, even hygienic, crimes and their respective punishments are mingled together. As we should expect from the fundamental and traditional love of truth and hatred of falsehood which, even by the testimony of their Greek foes, always characterized the ancient Iranian people, the highest value is attached to the observance of contracts (*mithra*), and breach of contract is severely condemned, even when towards unbelievers. Contracts are said to be confirmed in six ways—by word of mouth, by handgrasp, or by the pledging of a sheep, an ox, a man, or a piece of land, respectively (*Vend.* iv. 2ff.). Crimes of personal violence are carefully graduated according to the seriousness of the injuries done and the number of times committed, the penalties being fixed on a sliding scale of (apparently) scourgings. Capital punishment, curiously enough, is prescribed, not for taking life, but for performing irregularly and without sufficient knowledge certain priestly functions. The ordinary unit, so to speak, of corporal chastisement for all kinds of crimes is *upāzana*, which is generally translated 'stroke' or 'blow' with a horsewhip or scourge. A difficulty arises from the enormous number of these units which are prescribed for certain crimes, rising to hundreds and even thousands, which it would be quite impossible for any human being to bear. As, however, there was apparently a scale of monetary equivalents for corporal chastisements, it may be that these impossible numbers are simply meant as a guide to fix the amount of such wergild. As a matter of fact, far more serious punishments are assigned to what we should consider slight ritual or ceremonial transgression than to crimes of violence. In the opinion of Spiegel and Geiger, these *upāzana* may possibly mean simply blows with an instrument for the slaying of noxious insects and other creatures of the Evil Spirit, whose destruction was supposed to atone for a certain degree of crime.

As the *Vendīdād* was exclusively a priestly code of the Magians, 'it is self-evident why transgressions of religious precepts are most severely punished. If the penalty consisted only in the delivery of slain *khrafstras*, it might of course reach very high sums. It is probable that, quite early, persons could be relieved of their obligation by the payment of money compensation to the priest. The scourge could never have assumed such dimensions without provoking opposition' (Geiger, *Ostīrān. Kultur*, p. 459).

Be this as it may, the system of an equivalent fine in money for successive degrees of corporal punishment seems to have subsisted down to Sasanian times, inasmuch as in the Pahlavi treatise, *Shāyast lā-Shāyast* (lit. 'licet non-licet'), which is the standard text of later Mazdean casuistry, in its comment on the above-quoted 4th Fargard of the *Vendīdād*, the scale of lashes for various degrees of violence, rising from five to two hundred, is given with equivalents in *dirhams*

and *stīrs* (Gr. δραχμή, στατήρ), which originally were said mythically to represent the weights in the golden scales of Rashnū, the Spirit who weighed the deeds of the dead, but which later on were translated into real monetary values (see E. W. West, *SBE* v. [1880] 239–242; C. de Harlez, *Introduction à l'Avesta*, Paris, 1881, pp. ccxxviii, ccxxix). In the case of one crime mentioned in the vision of Arṭā-ī Vīrāf, the penalty would appear to amount to about £2000.

The fact that in the Avesta and the subsequent Pahlavi literature practically no distinction is made between moral sins and legal crimes, between ecclesiastical and civil jurisprudence, accounts for the fact that we have really no civil code in the Sacred Book, and in spite of its name the Pahlavi *Dāṭistān-ī Dīnīk* ('law-code of religion') is purely a treatise of moral theology. Fragments of what may be called civil legal codes exist in one or two Pahlavi treatises mentioned by West. Thus what he styles 'the Social Code of the Parsis in Sāsānian times' contains information about slaves, partners, and joint proprietors, 'decisions of the leaders of professions and agreement and disagreement with their decisions,' the laws of property, the income of wives, annuities, mortgage, care and adoption of children, 'infallibility of officials,' etc. One provision regarding a man with two wives may be quoted:

'Each wife separately is joint proprietor with the husband, but the wives are separate proprietors as regards one another; and it is not allowable for a wife to alter that joint proprietorship, but it is for the husband' (*GIrP* ii. [1904] 117).

There can be no doubt whatever that civil codes, tribunals, and judges must have existed under all the successive Iranian dynasties, under the supreme authority of the king. It will be remembered that twice in the OT the 'laws of the Medes and Persians' are specially referred to in identical terms. In Dn 6^{15} it is said to be 'the law of the Medes and Persians' that no decree made by the king may be altered; and in Est 1^{19} there is mention of 'the law of the Medes and Persians,' which may not be altered, apparently even by the king himself. As regards the punishment of crime, it is well known that throughout history, and even to the present day, penalties of gruesome cruelty have been characteristic of Persian rulers and magistrates. It has been remarked by more than one writer that the horrible punishments detailed in the *Inferno* of Arṭā-ī Vīrāf are almost certainly reproductions of the dreadful tortures inflicted in the Sasanian courts and tribunals, and a further suggestion has been ventured that some echo of the same may not improbably be found in the grim punishments of Dante's *Inferno*.

LITERATURE.—W. Geiger, *Ostīrānische Kultur im Altertum*, Erlangen, 1882, bk. iii. ch. vii. § 46, 'Das Recht,' also Eng. tr. by Dārāb Peshotan, 2 vols., London, 1885; other authorities as quoted in the text.

L. C. CASARTELLI.

LAW (Japanese).—1. The laws of ancient Japan, as of all ancient peoples, were those of custom. Though their details have been lost, it is evident that the two fundamental principles—of Imperial sovereignty, and of the family system—were firmly established even in early days. The Imperial House considered itself the head of the whole race, and governed accordingly, while each clan, under its own head, called *omi* or *muraji*, was represented at the court, holding its office by inheritance from generation to generation. Within each clan the law of custom was followed, the clansmen seeming to have rendered unquestioning obedience to their chief. This period of authority derived from custom extended from pre-historic times to about A.D. 600, and may be regarded as a time uninfluenced by foreign ideas, in which were laid the foundations of those later laws most uniquely Japanese.

2. The oldest code mentioned in Japanese history is the constitution formed by the regent, Prince Umayado (Shotoku Taishi), in the 12th year of Empress Suiko (A.D. 604). This consisted of seventeen articles, and is commonly known as *The Seventeen Article Constitution*. Whether, however, this constitution should be called a positive law or merely a political principle is a question discussed but not settled by Japanese historians, since it was issued in the name of the Prince and not of the Empress.

In the tenth year of Emperor Tenchi (A.D. 671) a code of laws, said to have consisted of twenty-two volumes, was formed; but the entire code was lost, and its contents are unknown. In the fourth year of Emperor Mommu, Prince Osakabe and Fujiwara Fuhito were charged with the duty of codification; and in the following year, the first of Taiho (701), the work was completed. This entire code, consisting of eleven volumes of general law concerning government organization, administration, and private relations, and six volumes of criminal laws, was promulgated and enforced the same year, and is known as the *Taiho Code*. It also has been lost.

In the second year of Yoro, in the reign of Emperor Gensho (718), Fujiwara Fuhito and others were again ordered to revise the statutes. The revision consisted of ten volumes of general law and an equal number devoted to criminal law. Though called by the name 'Yoro,' this was nothing more than a revision and supplement of the Taiho Code, and is, therefore, commonly known by the latter name. The part of this code on general law has been perfectly preserved, but the part on criminal laws has been lost, with the exception of four chapters. This is the oldest law-book in Japan.

These laws were marked by Chinese influence—not that Chinese law was adopted as a whole, but the best Chinese principles were added to Japanese laws already existing. The Taiho laws, with many revisions and supplements, governed the nation for about five hundred years, until 1190. There are many commentaries, chief among them being *Ryo-no-Gige*, *Ryo-no-Shuge*, and *Ryo-Sho*. The first of these was officially edited in the tenth year of Tencho in the reign of Emperor Ninna (833), and is recognized as of the highest authority.

3. With the establishment of the feudal system, the individual Shoguns issued laws for the government of their vassals; and, as the authority of the Shoguns increased, the territory within which the Taiho laws were enforced decreased until, with the establishment of the Shogunate government at Kamakura under Minamoto Yoritomo (middle of 12th cent.), it was limited to places directly under the control of the court. A remarkably simple code of feudal laws consisting of only fifty-one articles was formed by Hojo, the executive head of the Shogunate, on the 8th of August, in the first year of Teiei, in the reign of Emperor Gohorikawa. It is known as the *Teiei-Shikimoku*, and accorded so well with the spirit of feudalism that it remained effective until the end of the Tokugawa Shogunate (1867).

The characteristic of this code is its rejection of Chinese influence and its adaptation to the maintenance and development of a unique Japanese feudalism. In the days of the Taiho laws, the whole country was under direct government supervision; but during the feudal period only a little territory remained under such control, by far the larger part being held as arrière-fiefs. In the earlier period, the children of a family shared equally in the inheritance of property, but under feudalism the eldest son took precedence.

4. With the fall of the Kamakura Shogunate

(1334) its successor, the Ashikaga, continued to enforce the principles of the Teiei-Shikimoku; but the laws were revised from time to time until the articles numbered two hundred and ten. The *Kenbu-Shikimoku*, of seventeen articles, was issued during the time of the Ashikaga Shogunate; but the affairs of the country became disorderly, and neither the law of the court nor the will of the Shogunate was executed. Many feudal lords declared their independence; and some among them issued their own regulations or family laws, of which those of the Shingen, Ouchi, Chosokabe, Hojo, and Asakura families remain intact. For two hundred years, until the establishment of the Tokugawa Shogunate (1603), the country passed through what is known as the dark ages, and no new laws of permanent value were enacted.

5. In the eighth year of Keicho in the reign of Emperor Goyozei (1603), Tokugawa Iyeyasu pacified the whole country and established his government as Shogun in Yedo (now Tokyo). Two hundred and sixty-five years of peace followed. The Tokugawa family tried to govern the country according to already existing customs, and, as far as possible, avoided the making of written laws. But, as time passed, the number of simple statutes increased, and they were codified in what is known as the *Kwajo-Ruiten*. This code was divided into two parts, the first dealing with laws of ceremony, of administration, and of personal relations, while the second contained the criminal laws. As the criminal law comprised a hundred articles, the people of the time termed it *Tokugawa's Code of the Hundred*. Secrecy was a governing principle of the Tokugawa Shogunate; these articles, therefore, were not published, but privately distributed among feudal officers for information and guidance. As a result, these laws, though of comparatively recent date, are not in all points clearly understood.

6. The uncertainty concerning these laws of the Shogunate is increased by the fact that at the time of the Restoration in 1867, when the authority which had been exercised by the Shogunate was restored to the Imperial House, they were entirely inapplicable, being in reality family and not national in their nature, and they were, accordingly, completely set aside. During a period of some seven hundred years the Imperial House had had no real voice in the government, and possessed no laws which could at once be enforced. As a temporary measure, certain Chinese laws were revived and articles from the Taiho Code were revised. Contact with Western nations and a study of their civilization showed the necessity of laws in harmony with the modern world; and in the fifteenth year of Meiji (1882) the criminal code was promulgated. This was followed, in the twenty-second year (1889), by the proclamation of the Constitution, and, in the thirty-third year, (1900), by the civil code. Auxiliary laws of procedure have been issued on the models of Western nations; but all these, together with the standard codes, recognize and enforce the two fundamental principles which from the first have characterized Japanese law: the sovereignty of the Imperial House and the family system.

TAMAKICHI NAKAJIMA.

LAW (Jewish). — The important signification which Judaism from earliest times has attached to the law is outwardly indicated by the fact that the religious vocabulary of the Jews presents no fewer than seven synonyms for this conception: *ḥôq* (also *ḥuqqāh*), the most comprehensive expression for law, the laws of nature being also indicated by it, *mishpāt*, *'êdūth*, *miṣvāh*, *piqqūd*, *tôrāh*, and the term *dāth*, which is borrowed from Persian.

The legal portions of the Pentateuch are: Ex 12 f., 20–28, 25–31, 34 f.; Lv 1–8, 11–25, 27; Nu 5–10, 18 f., 27[7-11], 28–30, 35 f.; Dt 4–27.

The usual division of the laws into legal, ritual, and moral is not supported by the sources; such a distinction is nowhere expressed, nor can such a division be made with regard to their contents. On the contrary, one and the same law is often both legal and moral—*e.g.*, the numerous social laws; and just as often the basis adduced for the legal and ritual laws elevates them to moral laws.

An outward distinction is impossible because all laws without distinction are regarded as divine commands. All commands are of divine origin, since God represents law and morality in idea. This conception is the constant element in Jewish religion at all stages of its evolution, which we can still partly trace in the original documents. However much law may have varied in its connotation at different times, it was always regarded as an expression of the divine will; and he who professed to belong to the Jewish community must not only acknowledge the one God, but also conform to all His laws unconditionally. Disobedience to the commands of God was equal to heresy, just like idolatry and superstition, and was described as 'profanation of the divine name.' Judaism was from the beginning more a religion of doing than of believing, and, therefore, it has laid the main emphasis on the legal rather than on the mystical element. The constitution of Judaism, accordingly, is not a number of articles of belief, but ten commandments; and the revelation at Sinai is represented not as a communication of secret doctrines, but as a proclamation of the divine will; Moses is not a metaphysician, but a lawgiver.

The Pentateuch, as we have it to-day, does not present one uniform system of legislation, but a composite body of laws from several sources of very different times; and, in spite of all their work, critics have not entirely succeeded in assigning the single laws to a particular source or even to a particular time. The oldest laws (esp. Ex 21–23) exhibit a considerable degree of harmony with the old Babylonian Code of Ḫammurabi, but a dependence of the one on the other must not be assumed. In comparing the two systems of law, apart from the great progress in single laws, we are struck by a difference in principle, viz. the intimate union of law and morality which characterizes Jewish legislation (cf. *e.g.* Ex 22[20-26] 23[9. 12] and esp. Dt, *e.g.* 5[15] 10[17-19] 15[9-11] 24[15]).

The discourses of the prophets from the middle of the 8th cent. onwards already presuppose a law, which they recognize as binding and whose nonfulfilment they censure. Frequently, however, they polemize against the law; they declare the whole system of worship worthless and even hated of God, when the nation does not practise justice and morality. But the elevated moral exhortation of the prophets was little understood and still less followed. It was too abstract to exercise a decisive influence on the life of the people. It had first to be made practicable in a social legislation, adapted to different cases and circumstances, and transformed into a rule of conduct for the individual. In this way Deuteronomy took its rise; it is a product of the prophetic teaching, and places social justice at the heart of religion, while it restricts the sphere of worship to a great extent, and, in particular, recognizes only one place of worship. After the return from the Exile and the building of the second Temple, the order of worship in all its details was appointed in the 'Priests' Code,' although its constituent parts are, it is true, of an

earlier date. The different law-books were now combined into one book along with the traditions of primeval history and the history of the nation which also originated at different periods (up to the death of Moses). Moses was regarded as the author of this book, every word of which was supposed to be inspired, and was designated by the name *tôrāh*, 'teaching.' Belief in its divine origin and recognition of its whole contents became the basis of Judaism under Ezra. This book was by no means a law-book; half of its contents were of the nature of narrative, so that it appealed to the understanding and imagination as much as to the will; and it was those narrative portions that had the greatest influence on the religious education of the people. The LXX made a great and most momentous error when, for want of an exactly corresponding Greek expression, they translated *tôrāh* by *νόμος* ('law'), giving rise to an utterly false conception of the nature of Judaism, and making possible, at a later date, the historically important attack of the Pauline letters upon the Law. The fact that the Jews regarded the book as 'teaching' is indicated by the Aramaic translation *'ôraithā*, which can mean only 'teaching' and never 'law.' This is especially shown by the wide-spread demand of learning and teaching of the Torah, and by the fact that the occupation of the intellect with it was regarded as the loftiest and most delightful of tasks. A classical proof of this is afforded in Ps 119, which, following the succession of the letters of the Hebrew alphabet, presents in 22 times 8 verses an endless variation on the same theme: the Torah is the chief good, chief happiness, pleasure, entertainment, and comfort. The law was only the framework upon which the pure monotheism, which forms the substance of the Jewish teaching, could establish itself, work itself up, and become the religion of the people.

Simultaneously with the elevation of the Torah to be the religious book of the community, the synagogue was established with the reading, translation, and explanation of the Torah as its first object. As soon as it was introduced, the Torah, like every other law-book, required explanation by experts, and the *sôf^erîm*, 'scribes' (from *sêfer*, 'book'), became the religious authorities in Judaism from that time onwards. The expositions of the Torah laid down in their lectures soon became quite as binding as the written teaching; and thus there was developed an oral teaching, which did not, however, interfere with the validity of the Torah, being at first only an application of it. But it soon went beyond the written teaching, and, in particular, it was supposed to create a 'hedge round the teaching,' on the one hand to preserve the essentials of the religion from corruption and evaporation, and on the other hand to secure the observance of the religious laws by means of provisions, sometimes lightening, sometimes increasing, their burden. The oral teaching varied with the custom and common law of each period, adapted the written word to the changed outward circumstances and new views, and even directly created new provisions, which could not possibly have been foreseen in the Torah. Thus, for instance, the whole synagogue service with its order of prayer was gradually introduced by the scribes, and at a later date, in the Hellenistic period, feasts like Pūrîm and Ḥănukkā were introduced and made religiously binding. The collision of Judaism with Greek civilization raised a very difficult problem for the scribes; and, if the victorious elevation of the Hasmonæans saved Judaism from the danger of the moment, the newly founded Jewish State nevertheless had, from the necessity of the case, to come forward in opposition to the scribes, who wished to regard Judaism as merely a religious community. Thus arose the parties of the Pharisees and the Sadducees. The former, led by the scribes, were the representatives of the religious principle and emphasized the value and necessity of the oral teaching in addition to the Torah. The latter, worldly-minded throughout, wished to recognize the Torah alone. The Sadducees, accordingly, lukewarm in their attitude towards religious matters, exerted their influence towards petrifying religion, while the pious Pharisees sought its progress and development. Under the compulsion of this contest, the Pharisees extended the oral teaching more and more and had to find a basis for it, and, in particular, to prove its agreement with the Torah. About the last century before Christ an attempt was made by Hillel and Shammai to fix the oral teaching in writing; this had previously been avoided, partly to preserve intact the authority of the Torah as the only valid religious document, and partly to leave the tradition free and flowing. Here, too, it is incorrect and one-sided to speak of an oral 'law.' For from the very beginning the oral no less than the written teaching contained narrative, instructive, and edifying portions as well as the legal elements; the legal portion was designated Hălākhā, the narrative Haggādā. Jewish thought, feelings, and hopes were laid down in the proverbs, parables, and stories of the Haggādā, which for this reason is just as important a source for the customs and religious views of the Jews as the Hălākhā. The Hălākhā, *i.e.* the religious norm, was in the different schools subjected to great differences of opinion, which the scribes sought to clear up in public discussions. A definite system of logical and exegetical principles gradually formed, according to which the Hălākhā was derived from the written text. The wider the circle within which the life of the Jews moved, and the wider their circle of knowledge and opinions became, the more the sphere of the Hălākhā had to be extended. It embraces temple rites and synagogue worship, land laws, civil and criminal law, poor laws, laws regarding marriage, laws about foods, and laws of health.

The oral law, which now gradually became written law, also recognized the existence and necessity of an unwritten law, controlling matters left to the moral feeling of the individual—the finer demands of morality which did not admit of formulation and classification. The unwritten law was designated *dābhār ham-māsūr lal-lēbh*, 'something which is left to the heart.' This conception was a healthy counterpoise to the ever-increasing tendency to determine beforehand the proper course of action in all circumstances by means of a law. On the other hand, it filled up the deficiencies and gaps that are a necessary feature of every written law. It is thus entirely misleading to speak of the Jewish religion as purely legal in character. The designation *dîn*, 'law,' for the individual provisions applies exclusively to those religious duties which deal with definite actions that can be judicially formulated—what is prohibited or allowed. The *dîn* demands nothing but obedience; the *dābhār ham-māsūr lal-lēbh*, on the other hand, appeals to the moral feeling, and thus recognizes morality as a necessary supplement to the law. The Hălākhā gives numerous instances in which the individual cannot be punished according to law, but is guilty in the eyes of the law of God.

In the midst of the work of recording the oral law there took place the great catastrophe which in A.D. 70 destroyed the State and the Temple of the Jews. The result of the dispersion of the Jews was that, since its external unity had ceased, Judaism anxiously sought to preserve its inner unity in law and custom. While up to this time

the object of all additions to and burdens on the law was to preserve the teaching of Judaism intact, the law now had the further task of preserving the very existence of the Jews as a people at all. The study of the law was now regarded as the highest religious duty and an equally valuable, in fact a more valuable, substitute for the earlier sacrifice. If the traditions of the Haggādā played an important part in the consciousness of the people, the Hălākhā was the chief occupation of the high schools in Palestine. They carefully sought not only to fix all the single provisions, but in particular to preserve all those laws and customs which by force of circumstances had for a time—they hoped only for a time—fallen into disuse. 'Aḳîbā ben Joseph (*q.v.*), who died as a martyr after the fatal issue of the rising of Bar Kokhba (A.D. 134), brought the recording of the oral teaching to a temporary end. He sought to arrange the immense amount of material from two points of view: according to the matter in the form of a book of law (*Mishnā*) and according to Bible verses in the form of a running commentary to the legal books of the Torah (*Midrāsh*). After his death his pupils tried with all possible speed to close the record finally, so that the tradition might not be lost by the violent death of other scholars. 'Aḳîbā's Mishnā formed the basis on which his pupil R. Mê'ir further improved, and after his death R. Yehûdā, the patriarch († *c.* 200), closed, the record, and created the Mishnā as a generally received book of law. Soon after, the Midrāshîm, which in their main contents went back to 'Aḳîbā and his contemporaries, were completed.

Their names (with the exception of a few which are preserved only in fragments) are *Mᵉkhîltā* (on Exodus), *Sîfrā* (on Leviticus), and *Sîfrē* (on Numbers and Deuteronomy). These Midrāshîm have not, however, been any more officially recognized than the collection of traditions which has been preserved to us under the name of *Tôseftā*. In attitude and aim the Tôseftā is similar to the Mishnā, but it originated in other schools and had accepted many traditions which are wanting or rejected in the latter. It is, therefore, a priceless source for the scientific investigation of the Hălākhā. The Mishnā and the Tôseftā are divided into six portions: (1) synagogue worship and agriculture; (2) sabbath and feast days; (3) law of marriage; (4) civil and criminal law; (5) temple rites; and (6) laws of purity.

The completed Mishnā, which was composed in the Hebrew language, was taken by Rābh and Samuel to Babylon, and taught and explained in the institutions of learning founded by them there. The Palestinian schools also sought to explain the Mishnā, which, owing to its condensed method of expression, was often difficult to understand. These explanations in the Aramaic tongue, which are called *Gᵉmārā*, and which have been written down and collected, furnish more than a bare commentary to the Mishnā. In their outward form they are records of the discussions which took place in the schools during three centuries, and they preserve these in all their original vividness. In their contents, particularly in the Haggādic portions, they are a repertory of everything that the most distinguished representatives of Judaism during the period spoke, thought, felt, experienced, and knew. While the explanation of the Mishnā was not finished in Palestine, the Babylonian Gᵉmārā was completed about A.D. 500. The Mishnā and the Gᵉmārā together were called the *Talmud*. Of the two Talmuds, the Babylonian became in practice the only authoritative one; the Palestinian (incorrectly called the Jerusalem Talmud) was not recognized, and was always much less studied.

The Talmud as a whole is not, strictly speaking, a law-book like the Mishnā; it places the opposite opinions with their reasons beside each other and often leaves the debated question undecided. In spite of that, it brought Jewish law to a fixed system, and thus lent to Judaism the necessary inner unity. By means of it Judaism was remoulded into the homogeneous mass which it presented during the whole of the Middle Ages. The Talmud allows a sphere of action to the freedom of thought altogether out of proportion to that which is granted to the freedom of will or action. It does not demand blind obedience to the law, but would recognize as valid only what is rationally deduced from the word of Scripture, and asks time and again in regard even to Biblical commands: Why has the Torah so ordered? It then adduces a logical or moral reason. Only in the case of very few laws, for which a rational explanation could not be found (*e.g.*, the red heifer [Nu 19]), is the authoritative command of God adduced as the ground of obligation.

The Jewish law, as it found its final expression in the Talmud, has often been represented as an unbearable yoke. This designation, however, which is played upon as early as Sirach, indicates only the impression which the law made on non-Jews, and not the emotions with which the people themselves regarded it. The Jew ever found joy and satisfaction in the fulfilment of it, and coined for it the special expression *śimḥāh śel miṣvāh*, 'joy in the commandment.'

The recognized benediction on occasions of fulfilling all the more important religious provisions ran as follows: 'Praised be thou, O God, who hast sanctified us by thy commandments'; and in the daily evening prayer they said: 'We rejoice in the words of thy teaching and the words of thy commandments now and evermore, for they are our life and the length of our days.'

It was not freedom from the law, but freedom in the law, that was the religious ideal of the Jews. They felt themselves morally free simply through the fact that they subjected themselves joyfully to the law, and recognized that it must be obeyed even when it was not there. The patriarchs they regarded as especially virtuous because they had kept the law even before it was given. It was not Kant, therefore, who was the first to teach the autonomy of morality. In one place we are told that he who keeps the commandments stands as high in God's sight as if he had produced them out of himself (cf. F. Perles, 'Die Autonomie der Sittlichkeit im jüd. Schrifttum,' in *Festschrift für Hermann Cohen*, Berlin, 1912, pp. 103–108).

It is true that the frequent use of petty casuistry, and especially the forced exegesis of the Talmud, repels us, but the Talmud ought not to be judged in this light alone. Emphasis should be laid on the fact that the morality of the Jews did not degenerate under its control, but rather became more rigorous. For the casuistry had almost always the tendency to make the law more exacting, and did not, as a rule, deal with moral so much as with legal and ritual questions, while morality was often appealed to as a supplement to the law. On the other hand, it was important that certain moral requirements, such as care for the poor, the sick, and unburied dead, and even kindness to animals, were made laws in the Talmud. It is often alleged that all the laws aim at the well-being of the individual and of society, but it is quite as frequently emphasized that only the unselfish fulfilment of the law has moral value, and that the ennobling of humanity is the highest aim. Specially peculiar to the Judaism of the Talmud is the conception of the *qiddūsh hash-shēm*, 'hallowing of the divine name,' according to which every Jew ought to witness for God by an exemplary life, and contribute towards His recognition among men.

In spite of the fact that the divine legislation as a whole was regarded as eternal and unchangeable, in individual cases the temporary suspension and even the annulling of a law was recognized as justifiable and necessary. Sufficient ground for putting aside even Biblical commands was found

by the lawyers not only in danger to life or impossibility of carrying out the law owing to a *vis major*, but also in intolerable inconvenience to the community, danger to the existence or repute of the religion, and collision with the laws of the State. The 'dignity of man' is also repeatedly given as a reason for temporary suspension of a law.

When it was completed, the Talmud was adopted as the only authority in matters of religious law, and became, like the Mishnā 300 years previously, the subject of study and exposition. Since it was not, of course, a law-book in the strict sense of the term, definite rules had to be laid down for judging in cases where the Talmud presented undissolved differences of opinion. The need of codifying the extensive contents of the Talmud came more and more to the front. When the Karaites (*q.v.*) rejected the whole Talmud, and, in fact, the oral teaching altogether, and recognized the Torah alone as binding in matters of religious law, a code had to be formed which set forth plainly what was to be regarded as law in the Talmud and what only as individual opinion. Hence arose, from the 8th to the 9th cent., the so-called *Hălākhôth Gᵉdôlôth*, compendium of the Talmud, which in outward form follows the Mishnā, but attempts to make a better arrangement of the material according to subjects. This work, which originated from the Gᵉônîm, the heads of the Babylonian schools of the time, did not obtain such an extensive circulation as the *Hălākhôth* of Isaac al-Fāsī, which was composed two centuries later. Al-Fāsī makes use of the Palestinian Talmud also to decide questions of religious law, and is much more independent than the Gᵉônîm in laying down general rules, as well as in using them to obtain concrete results from the discussions of the Talmud. The most original and important code of Rabbinic Judaism is the *Mishnēh Tôrāh* of Moses Maimonides. Absolutely abandoning the dialectics and the order of the materials of the Talmud, he gives a strictly systematic exposition of the laws and the teaching of Judaism in fourteen books. In opposition to all his predecessors, he specifies neither his sources nor opposed opinions, and gives no reasons for his own decisions. On this account his work was very sharply attacked from many sides, although his opponents could not free themselves from his influence. After him the first work to obtain far-reaching influence was the *Ṭūr* of Jacob ben Asher of the 14th cent., who, in fact, used Maimonides as his model, but produced a new and unique book of law, stating and discussing the contradictory opinions of the authorities after the Talmud. This work remained the undisputed authority for more than two centuries. It was only after the expulsion of the Jews from Spain and Portugal that the need for a new code more suited to the changed conditions made itself felt. To meet this need Joseph Qaro produced the *Shulḥān ʿĀrūkh*, basing his work on the *Ṭūr*, but also consulting the rest of its predecessors. Joseph Qaro often proceeds very independently in his code, and his work on this account met with energetic opposition before it was generally accepted. The Polish Talmudists especially opposed it, one of whom, Moses Isserles, provided it with continuous glosses, which were then printed along with the work. A century later, however, the *Shulḥān ʿĀrūkh* was the only authoritative code of Rabbinic Judaism, and it has remained so among the orthodox Jews to the present day. It had, in fact, contributed largely to the consolidation of Judaism, and was at the time of its production, when the Jewish communion threatened to break up, a historical necessity. Gradually, however, it became more and more a hindrance to free religious development, and, on the whole, its influence upon the culture, particularly of the Jews of eastern Europe, has been unfavourable. The efforts of the last century, therefore, towards the culture and reform of Judaism have aimed at destroying the unrivalled authority of this work.

LAW (Muhammadan).—I. *INTRODUCTION.*—**1. Muslim canon law (sharīʿah or sharʿ) and the sacred texts: Qur'ān and tradition.**—A Muslim is bound by religious regulations not only in the performance of his daily ritual prayers, the fast, the pilgrimage to Mecca, and other religious acts, but also in the contraction and dissolution of his marriage, in commercial contracts, and, indeed, in all events of any importance in his domestic and social life. All these religious regulations form together a code of law which in Arabic is called the *sharīʿah* or *sharʿ*, lit. 'the way' (viz. that which faithful Muslims must follow according to Allāh's will). Muslims believe that the regulations of this code depend not on human judgment, but entirely on Allāh's inscrutable will. Originally the only sources from which the knowledge of Allāh's law could be gained were the Qur'ān and the *sunnah*.

The Qur'ān contains few regulations of a legislative character. It is true that in certain verses instructions are given as to how a Muslim must generally distinguish himself from an unbeliever, as to his chief duties, and some sins which he must especially avoid; but these regulations do not form a complete system. From the beginning Muhammad's *sunnah*[1] was an indispensable supplement to the regulations of the Qur'ān. In the Qur'ān, *e.g.*, it is enjoined that a Muslim must perform his *ṣalāt* (*i.e.* the daily ritual prayer, which consists principally of praise of Allāh, prostration, etc.), but not how he must fulfil this religious duty. In such a case Muhammad's *sunnah* gave an explanation of the Qur'ān. All Muslims have always performed the *ṣalāt* in the same way as the Prophet had done before them, for Muhammad's position as a preacher of the new religion and as the head of the Muslim community entailed that his followers should observe not only the regulations which he gave as Allāh's will in the form of the Qur'ān, but also his personal commands and example.

After the death of Muhammad the traditions concerning the deeds and sayings of the Prophet and his companions, as well as the Qur'ān, were held in great respect; and the *sunnah* of these was an example worthy of following for the later Muslims, at least in so far as the Prophet had approved either implicitly or expressly of their acts or sayings. A tradition is called in Arabic *ḥadīth*, which commonly means 'story,' 'communication'; in a special sense 'the *ḥadīth*' means the whole sacred tradition.

[1] The word *sunnah* is often wrongly taken to mean 'tradition' (viz. regarding the deeds and sayings of the Prophet), but it really means the method of behaviour which is generally followed: the *sunnah* of a person means the ordinary line of conduct of the person, and the *sunnah* of a people means the manners and customs of the people. Cf. C. Snouck Hurgronje, 'Le Droit musulman,' in *RHR* xxxvii. [1898] 6 ff.; I. Goldziher, *Muham. Studien*, Halle, 1889–90, ii. 1 ff., 11 ff.

Originally the oral traditions were handed on from one generation to another. Many undertook long journeys in order to visit celebrated teachers of tradition in different lands and places, and to hear them relate their traditions. Besides the text (*matn*) of a tradition, the names of the persons who had handed it on, from the latest narrator to the Prophet, were accurately learned by heart. The trustworthiness of these teachers was the guarantee for the correctness of their narrative, and therefore the portion of the tradition containing the names of the teachers was called the *isnād* or *sanad*, *i.e.* 'the support' (viz. for the credibility of the traditions). Still, many of the Muslim traditions concerning Muhammad's *sunnah* are deliberately invented; on this point a historical and critical examination leaves no possibility of doubt. Decisions were ascribed to the Prophet on questions of all kinds which did not become important to Muslims till long after his death. Moreover, there are in currency numerous contradictory traditions. Apparently each party attributed to the Prophet just what they held to be the true conception. In the first century of Islām there was serious controversy as to the trustworthiness of many traditions. Every one knew that there were many true and untrue traditions as to the *sunnah* of the Prophet, and the opposing teachers of tradition accused each other of lying. But, when the ritual, the doctrine, and the most important social and political institutions had become definitely fixed, agreement was reached in wide-spread circles as to the trustworthiness of most traditions. When a tradition could not be brought into harmony with the generally current conceptions, it was regarded as false. Moreover, many successful attempts were made to harmonize contradictory traditions with the prevailing conceptions, by means of ingeniously discovered explanations.

Although there is no official and exclusively authoritative collection of Muslim traditions, there are six collections commonly recognized in the orthodox world, viz. the 'six books' or the 'six *ṣaḥīḥs*,' *i.e.* the six 'sound' or 'authentic' collections. Two of these—the collection of traditions of al-Bukhārī († A.H. 256=A.D. 870) and that of Muslim († A.H. 261=A.D. 875)—are held in great honour by orthodox Muslims. The other four are those of Abū Dāwūd, al-Tirmidhī, al-Nasā'ī, and Ibn Mājah.

The Shī'ites do not reject the authority of Muhammad's *sunnah*, but differ in opinion from the orthodox Muslims as to the trustworthiness of many traditions relating to it. They have their own collections of traditions.[1]

2. The fiqh and the fiqh-schools.—By the *'ilm al-fiqh* ('science of the *fiqh*') is meant the science of the regulations contained in the sacred texts. It was not enough to know only the literal contents of the Qur'ān and the traditions; it was also necessary to know in what sense these texts were to be understood, and how the commands and prohibitions which they contained were to be applied in different circumstances. The scholars who occupied themselves with this study of the *fiqh* (the *faqīhs*) have given an extraordinary extension to the original meaning of the regulations of the Qur'ān and of the traditions. They could find answers in the sacred texts to all possible questions of the law, and in this way the study of the *fiqh* has produced a vast system of legal casuistry worked out in every detail.

Since the opinions of scholars as regards the rules to be deduced from the Qur'ān and the traditions disagreed in many respects, there grew up in a short time different *fiqh*-schools, each having its own views as to questions of detail. Such a school was called *madhhab* ('party'). There were at first a great many of these schools; each *faqīh* of any importance had his own *madhhab*.

The rise, development, and ultimate fate of the different *madhhabs* were dependent to a great extent on accidental circumstances; and the favour of the Government often had a special influence on their reputation. If the judges and magistrates in a Muslim land were chosen by preference from among the followers of a particular *madhhab*, many people joined that *fiqh*-school, until change in the Government exercised fresh influence in an opposite direction. In the course of time most of the old schools lost their significance, until they finally had no followers at all. Only the four schools of Abū Ḥanīfah († A.H. 150=A.D. 767), Mālik ibn Anas († A.H. 179=A.D. 795), al-Shāfi'ī († A.H. 204=A.D. 820), and Ibn Ḥanbal († A.H. 241=A.D. 855) have retained adherents in the orthodox Muslim world down to the present day.

One of the extinct schools is that of Dāwūd ibn 'Alī († A.H. 270=A.D. 883), the *Ẓāhirīyah*, *i.e.* the party which prided itself on holding to the 'outward sense' (*ẓāhir*) of the text.[1] Nawawī, an Arabic writer of the 7th cent. A.H., mentions six *fiqh*-schools held in repute in his time,[2] two of which were the *Ẓāhirīyah* and the school of Sufyān al-Thawrī († A.H. 161=A.D. 777); but the formerly famous school of al-Awzā'ī († A.H. 157=A.D. 773) in Syria was by that time extinct. It is true that the value of the system of al-Awzā'ī was not less than that of other *madhhabs*, but, since its adherents lived in more or less remote places, far from the great caravan roads and from the route of the pilgrims going to Mecca, their opinions on the *fiqh* gradually passed out of consideration.[3] The *madhhab* of Jarīr al-Ṭabarī (the *Jarīrīyah*), more famous as a chronicler († A.H. 310=A.D. 922), had at that time also disappeared.

As to the *fiqh*-schools which still exist the following points may be noted.

(1) The school of Abū Ḥanīfah owed its great influence in later centuries especially to the Turkish Osman Sultans, who in the 16th cent. obtained authority over so important a part of the orthodox Muslims. From the beginning this dynasty showed exceptional preference for the Ḥanifitic system, and this *madhhab* is still dominant in Turkey and in all lands in which Turkish influence is felt. It has also spread in Central Asia (Turkestan, Bukhara, Samarkand) and in Hindustan, so far as the population there has accepted Islām as the result of the former Muslim invasions.

(2) The school of al-Shāfi'ī was based specially on the authority and influence of the 'Abbāsid Khalīfs. The Shāfi'ites had obtained a considerable supremacy in the centre of the Muslim lands in the Middle Ages, and their reputation still continued to increase until, in the 16th cent., the Ḥanifitic school came to the front under Turkish influence. Even after this time the Shāfi'itic school continued to possess many adherents, even in Syria, Egypt, and West Arabia, in which lands the Ḥanifitic school only was accepted as the official one in public matters; *e.g.*, the judges and ruling personages who were sent from Turkey to these lands were all Ḥanifitic, but the original population still continued to order its religious and domestic life according to the regulations of the Shāfi'itic school, and the study of the Shāfi'itic *fiqh*-books continued to flourish. The Shāfi'itic school is also dominant in the Straits Settlements, the Malay border districts of Siam, and the whole Indian Archipelago, as well as in the coast districts of Hindustan (Malabar and Coromandel), on the Persian Gulf, and in South Arabia (especially in Ḥaḍramaut). In German East Africa it is the most important; only a minority of the Muslim population there belong to the heretical Ibāḍites. Followers of the Shāfi'itic school are also to be found in Daghestan, and in some parts of Central Asia.[4]

(3) The school of Mālik ibn Anas flourished originally at Medīna. Later on, it spread over the whole of the west of Islām, not only in the north-west of Africa (Tunis, Algiers, Morocco, formerly also in Spain), but over the whole of Africa, so far as it gradually accepted Islām. Even in Egypt the Mālikitic school has many adherents. It has the same position in Upper Egypt as the Shāfi'itic has in Lower Egypt.

(4) The school of Ibn Ḥanbal has always been the least important; it has never had many adherents, and will probably completely disappear in time, like so many other *fiqh*-schools. At present Ḥanbalites are found in Central Arabia, in the interior of Oman, and on the Persian Gulf. Besides this, the followers of this school are found sporadically in Baghdād, in some towns of Central Asia, and in some districts (among others, in Syria) which do not lie on the great trade-routes. It is worthy of notice that the Wahhābites, who are generally considered heretics, prefer to be taken for Ḥanbalites; they often appeal to Ibn Taimīyah in order to defend their particular conceptions, which are in conflict with the requirements of modern life generally obtaining in the orthodox Muslim world. This scholar, though in many respects quite independent, belonged to the Ḥanbalite school.[5]

The differences of opinion between the *fiqh*-schools did not turn on fundamental points. It has been alleged, indeed, that Abū Ḥanīfah tried by preference to establish the rules of the *fiqh* in agreement with his own opinions on morality and justice, while other *faqīhs* (especially Dāwūd ibn 'Alī and Ibn Ḥanbal) kept strictly to the letter of the sacred texts. An unprejudiced comparison of

[4] As to Shāfi'itic Muslims in South Africa see, among others, C. Snouck Hurgronje, *Mekka*, The Hague, 1888–89, ii. 296 ff.

[5] Cf. I. Goldziher, in *ZDMG* liii. [1898] 155–160; and D. B. Macdonald, *Development of Muslim Theology, Jurisprudence, and Constitutional Theory*, London, 1903, p. 273 ff.

the various systems of *fiqh* shows, however, that this view is exaggerated, and that in general all Muslim scholars followed very much the same methods of establishing the *fiqh*-rules. Difference of opinion existed only on questions of detail.

Even the controversy between the earlier scholars on the question whether the *qiyās* was permissible raised no serious deep-seated difference of opinion. *Qiyās* means literally 'measuring off.' What was intended was reasoning by analogy—the application to similar cases of regulations which in the Qur'ān or in the tradition were given only with reference to special circumstances.

An example of *qiyās* is the following. A Muslim is forbidden in the Qur'ān (ii. 276–279, iii. 125, iv. 159, xxx. 38), as well as in tradition, to make himself indebted for *ribā*, *i.e.* not only usury, but every demand of interest. In the traditions in which the prohibition of the Qur'ān is explained in more detail, *ribā* is forbidden only if a Muslim carries on a business with gold, silver, and some kinds of merchandise which were formerly the usual objects of trade in Arabia. Some *faqīhs* thought that it was right to hold strictly to the letter of these traditions: '*ribā*,' they said, 'is forbidden only to any one engaged in the trades expressly mentioned in these sacred texts; for, if the demanding of interest was not permitted in other cases as well, this would have been clearly expressed.' Others thought that here the *qiyās* (analogy) must be applied, and that *ribā* must be regarded as equally forbidden in other cases of the same nature.[1]

Those who rejected the *qiyās* accused their opponents of misrepresenting and derogating from the laws of Allāh by following their own fallible human 'insight' (*ra'y*). The enemies of Abū Ḥanīfah, *e.g.*, charged him and his followers with establishing the *fiqh*-rules solely on the basis of *ra'y* and *qiyās*, and with neglecting the study of the tradition. 'Iblīs' (Satan), they said, 'was the first who had been guilty of such arbitrary arguments.' An appeal was made even to the Prophet, and it was maintained that he himself had already expressly forbidden the *qiyās* and all such kinds of reasoning. Still, the *qiyās* was in the end generally recognized by all orthodox *faqīhs* as permissible. As a matter of fact, it had never been possible to exclude analogy, and even those who had most prided themselves on keeping exclusively to the literal sense of the texts, such as the Ẓāhirites, had been themselves compelled in many cases to draw conclusions from the holy texts by means of argument (they then used to maintain that their conclusion was already 'included' [*mafhūm*] in the text, and, therefore, had not to be deduced from it by means of argument).[2]

There are some special methods of argument which have not found general favour among orthodox *faqīhs*, viz. the *istiḥsān* (*i.e.* to reckon something *ḥasan*, 'good'), which was used by Abū Ḥanīfah and his school, and a similar method of reasoning of Mālik ibn Anas, the *istiṣlāḥ* (*i.e.* judgment that something is for general good). Both methods had apparently as their object the establishment of *fiqh*-rules by the abandonment of analogy, thus departing from the regulations of the holy texts. Both Abū Ḥanīfah and Mālik thought this sometimes necessary, if holding fast to the letter of the law gave rise in exceptional cases to injustice, or was even quite impossible. But most *faqīhs* rejected these *istiḥsān* and *istiṣlāḥ*, and thought none qualified to depart in so arbitrary a manner from the usual rules, even though it might appear to be for the general good. Another method which was not generally favoured was the *istiṣḥāb* (lit. 'seek connexion with'), which was especially practised by al-Shāfi'ī, and with certain restrictions also by Abū Ḥanīfah. This *istiṣḥāb* meant that a doubtful situation was connected with a previous position of circumstances, and that the regulations which held good in the latter case were regarded as applicable in the former also. Such a position of doubt may arise if any one remains absent so long that his existence becomes uncertain. The Ḥanifites apply the *istiṣḥāb* only when the question arises of the retention of rights which have been already obtained. The Shāfi'ites do so even with regard to the acquirement of new rights. If, *e.g.*, any one dies after the existence of his blood-relation has become uncertain, then, according to the Ḥanifites, the latter has no right to his estate; but the Shāfi'ites do not recognize this limitation, and, according to them, the usual rules of inheritance obtain in such a case, just as if the existence of the absent party was certain.[3]

[2] Cf. C. Snouck Hurgronje's review of Goldziher's *Die Ẓāhiriten* in *LOPh* i. [1884] 421–425.

[3] For *istiḥsān*, *istiṣlāḥ*, and *istiṣḥāb* cf. I. Goldziher, 'Das Prinzip des istiṣḥāb in der muham. Gesetzwissenschaft,' in *WZKM* i. [1887] 228–236.

Fundamental departures from the doctrine of the four *fiqh*-schools are not found even among the Shī'ites and other heretical sects. Although each of these sects has its own doctrine in matters of *fiqh*, and this differs in many points from the opinions of the orthodox schools, the points of difference are generally limited to the same kind of details as those on which even the four orthodox *fiqh*-schools differ. The controversy which produced the heretical parties in Islām was not concerned with the *fiqh*, but rather with questions of the faith (*kalām* [*q.v.*]) and with the political question who should be the head of the Muslim community as the direct successor of the Prophet.

Orginally each *faqīh* of any importance could consider himself qualified to deduce the *fiqh* from the Qur'ān and tradition, but after the rise of the *fiqh*-schools independent criticism of the sacred texts gradually ceased, and it became more and more usual to join the *madhhab* which was locally recognized as authoritative.

Nevertheless, for a long time some very learned *faqīhs* maintained their own judgment on matters of *fiqh*. In the 3rd cent. there arose some more or less independent *madhhabs*; and several scholars, though they associated themselves in general with the opinions of an already established school, still considered themselves qualified to depart in some points of secondary importance from the views of its founder. Abū Yūsuf and Muḥammad ibn Ḥasan al-Shaibānī, *e.g.*, who belonged to the followers of Abū Ḥanīfah, had in many cases different conceptions from those of their master. Even al-Ṭabarī and Dāwūd ibn 'Alī might be regarded as followers of the Shāfi'itic school, though they had generally a wholly independent conception of the *fiqh*.

Later it became the general conviction in the orthodox Muslim world that scholars as well as laymen were bound to *taqlīd* (lit. 'to invest with authority,' *i.e.* to acknowledge that the rules of the *fiqh* had already been established in an authoritative manner). Such a person, for whom the rules of a *fiqh*-school had binding authority, was called *muqallid* (*i.e.* one who held others in authority). The earlier scholars, on the contrary, who had themselves deduced the *fiqh* from the holy texts, were afterwards called *mujtahids* (lit. 'people who had toiled strenuously'), and the search for the true sense of the sources to which they had applied themselves was called *ijtihād* (*i.e.* lit. 'to be zealous and take trouble,' here in the special sense of 'exerting themselves in order to determine the rules of the *fiqh*').

Muslim writers generally distinguish three kinds of *mujtahids*, because they think that not every one has been equally capable of independent judgment on matters of the *fiqh*: (1) 'Till the third century after the *hijrah*,' they say, 'there were general or unlimited *mujtahids*, who were so learned and acute that they could deduce the *fiqh* from the sources quite independently. To these belong the founders of the *fiqh*-schools, and some of their contemporaries. (2) After this time there were still *mujtahids*, but these were independent only within certain limits. Though they established new rules for *fiqh*-questions, which were not yet sufficiently settled, they apparently considered themselves bound by the principles of their school, and thus only built on the foundations laid by the master.' This second class of *mujtahids* were called '*mujtahids* of *madhhabs*'. (3) Later, when no more new rules were established, the necessity still remained, for some time, for a certain kind of *ijtihād*, for in each *fiqh*-school there was much diversity of opinion on questions of subordinate importance between the scholars of the *madhhab*, and contradictory traditions concerning the opinions of the founder of the school had often been brought into circulation. Scholars, such as Nawawī, who had settled which of these different opinions in the *madhhab* deserved the preference, were thus regarded by later Muslims as also in a certain sense *mujtahids*; they had 'weighed up' the contradictory decisions, and settled which of them must be regarded as the 'heaviest' (*al-rājiḥ*), *i.e.* the best. They were *mujtahids* of the third class.[1]

All later *faqīhs* are, according to the general conviction of orthodox Muslims, only *muqallids*, who are in all respects bound by the utterances of the former *mujtahids*. Those who hold a different opinion on this point, such as the Wahhābites, are regarded as heretics. The Wahhābites condemn the *taqlīd*; their scholars

[1] Cf. C. Snouck Hurgronje's review of Sachau's *Muham. Recht*, in *ZDMG* liii. [1899] 140 ff.

consider themselves still constantly bound by the duty of independent study of the sacred texts. Among the Shī'ites also *mujtahids* are still found who are qualified to judge in matters of religion on their own authority.

Every orthodox Muslim is, therefore, bound by the regulations of his *fiqh*-school, and the *fiqh*-books have become the law-books for later generations. The Qur'ān and the collections of tradition are, it is true, always held in high honour as holy texts, but it is not possible to know what doctrine may be deduced from these sacred sources except by means of the *fiqh*-books. The *fiqh*-books are still studied in all Muslim lands. In later times Mecca has, in a special degree, become the centre of the study of the *fiqh*, and in the great mosque of Mecca instruction in the *fiqh*, according to the method of the Middle Ages, is given almost uninterruptedly by various scholars.[1]

The great majority of Muslims cannot consult the *fiqh*-books for themselves, and must, therefore, use the explanation of a *faqīh*, who is qualified to give a *fatwā*, when they wish to know what the law prescribes in cases which are not of daily occurrence. A *fatwā* is a professional opinion on *fiqh*-matters, generally couched in the form of question and answer. A scholar who gives such *fatwās* is in consequence called *muftī*, and any one who is recognized as a competent *faqīh*, so that his legal advice is asked when occasion arises, may be regarded as a *muftī*. Besides this, there are in Muslim lands official *muftīs* paid by the Government to advise the public, and, when necessary, also the Government itself, as to the law. In some places, where adherents of different *fiqh*-schools are constantly found, the Government even appoints a separate *muftī* for each *madhhab*. The contents of the *fatwās* are obtained from the *fiqh*-books, since the *muftīs*, like all other scholars, are only *muqallids*. Sometimes, among the questions submitted to a *muftī*, are found situations which are new in Muslim society, and subjects which have become important for the Muslims only under the later influence of Western civilization; in such cases the *muftīs* must decide how the old rules are to be applied in the changed circumstances. In the *fiqh*-books of later date consideration is given, so far as is necessary, to the *fatwās* which relate to new situations.[2]

The general conviction of orthodox Muslims nowadays is that the doctrine of each of the four *fiqh*-schools represents a correct view of the canon law. At first the scholars disputed hotly on the *fiqh*, and their adherents often showed signs of great intolerance. For a long time bitter animosity existed between the teachers in the holy towns in Arabia and the *faqīhs* in the conquered territory (especially in 'Irāq). Those who lived at Mecca and Medīna would have liked to keep the monopoly of the sacred science in their own hands. They tried in every possible way to throw ridicule and suspicion on their rivals, who were frequently not even of pure Arabian descent (Abū Ḥanīfah, *e.g.*, was of Persian blood). Both parties deluged each other with a flood of abusive names. Although the majority of the people were not entirely acquainted with the details of the problems of scholarship, nevertheless, in places where the followers of different schools came into contact with each other, collisions often took place which gave rise to street fights and mutual persecution.

In spite of this, the controversial questions concerning the *fiqh* did not cause permanent divisions in Islām. On the contrary, the conviction gradually arose in orthodox circles that the difference of opinion between the *fiqh*-schools must be regarded not as a misfortune, but rather as a situation willed by God Himself. It is, they thought, apparently possible and permissible to hold different opinions as to various *fiqh*-rules of secondary importance. Thus, if one school cherished a less rigorous opinion concerning a command or prohibition than the other schools, it was proper for the faithful to regard this as in some degree a blessing, since the less rigorous opinion could apparently also be defended with good reason. A tradition says that the Prophet himself declared: 'The difference of opinion in my community is a proof of God's mercy.'

Each Muslim has to give the preference to the observance of the regulations of his own *fiqh*-school, and only under exceptional circumstances is an appeal made to the divergent doctrine of another *madhhab*. This appeal is also called *taqlīd* (in this case the recognition that the rules of another school are authoritative on a special point), and is held permissible under certain conditions for laymen.

The following is an example. According to the Shāfi'ites, children under age can be given in marriage only by their father or grandfather. In Acheh, where the Shāfi'itic *madhhab* is usually followed, it was the ancient national custom not to allow children to remain unmarried until their majority. Now, if it happens that the father and the grandfather of children under age are dead, the difficulty is solved by means of *taqlīd*, appealing to the Ḥanifites, who declare that even distant blood-relations are also competent to give children in marriage during their minority.[1]

Passing from one *madhhab* to another is not always approved of. There are Turkish scholars who permit those who follow the Shāfi'itic or another *madhhab* to become Ḥanifites, but forbid Ḥanifites to go over to another *fiqh*-school. Such transference to another *madhhab* is scarcely ever found except when there is some exceptional reason for it—*e.g.*, when any one leaves his native country and goes to live in a land where the majority of the inhabitants belong to another *fiqh*-school. In places such as Mecca, where the adherents of the different *fiqh*-schools constantly come in contact with each other, transference to another *madhhab* is found, if, *e.g.*, a man and woman who belong to different *fiqh*-schools wish to marry.

3. The 'uṣūl al-fiqh' (i.e., the sources or foundations of the fiqh).—The *fiqh* is based on four infallible foundations: (1) Allāh's word—the Qur'ān; (2) the words and deeds of the Prophet—*sunnat al-nabī*; (3) the general agreement of feeling among orthodox scholars—*ijmā'*; and (4) the analogy—*qiyās*. Each of these foundations supplies a guarantee that the doctrine of the *fiqh*-schools is really in agreement with the will of Allāh. They are called the *uṣūl al-fiqh* (lit. 'roots of the *fiqh*'). The name *furū'* ('branches') is used to designate the rules of the *fiqh* based on these *uṣūl*.

(1) *The Qur'ān.*—As has been stated above, the *qiyās* originally was not generally recognized as a permissible method of establishing the *fiqh*, nor has the infallibility of *sunnah* and *ijmā'* been recognized from the beginning. But none could contest the authority of the Qur'ān, which, accord-

[1] Cf. C. Snouck Hurgronje, *Mekka*, ii. 232 ff., and *The Achehnese*, Eng. tr., Leyden, 1906, ii. 1 ff.; P. Arminjon, *L'Enseignement, la doctrine et la vie dans les universités musulmanes d'Égypte*, Paris, 1907.

[2] For the *fatwās* and their contents, which are often important, see C. Snouck Hurgronje, *Mekka*, ii. 238, 240, also 'Ein arab. Beleg zum heutigen Sklavenhandel in Singapore,' in *ZDMG* xlv. [1891] 395–402, 'Iets over verjaring in het Moehamm. recht,' in *Tijdschr. Bataviaasch Genootsch.* xxxix. [1897] 431–457, and 'Islam und Phonograph,' *ib.* xlii. [1900] 393–427; I. Goldziher, 'Über eine Formel in der jüd. Responsenlitteratur und in den muham. Fetwâs,' in *ZDMG* liii. [1899] 645–652.

[1] For further particulars cf. C. Snouck Hurgronje, *The Achehnese*, i. 344 ff., and see also § 5 (*a*), below.

ing to Muslim opinion, contained Allāh's own words, nor was there later any doubt that Muhammad had accurately delivered God's word.

According to tradition, the Prophet had, with the help of the angel Gabriel, repeatedly collated the sacred text with the original preserved in heaven, and the Qur'ān must thus be regarded as a completely trustworthy source of Allāh's will. It is true that some of the verses contradict each other, but it generally appeared possible to give an interpretation of the contradictory texts which brought them into harmony; and, if this was not possible, it was assumed that the one verse of the Qur'ān was cancelled by the other.

(2) *The sunnah.*—From the very beginning the *sunnah* of the Prophet passed in general as a guide for all Muslims. But Muhammad was not regarded by his contemporaries as infallible. He was often subjected to severe opposition, even from his most loyal adherents, and, indeed, did not himself make any claim to infallibility. On the contrary, he often took pains to declare expressly that he was only a fallible man like every one else; he could achieve only one miracle which none else could accomplish—the communication of Allāh's revelation.

After the death of the Prophet, also, it occasionally happened that customs which he had expressly permitted to his followers, or of which he had himself given the example, were rejected and regarded as contrary to the true spirit of Islām.

The *mut'ah*-marriage is an example. According to several traditions, the Prophet had permitted some Muslims to contract temporary marriages—*e.g.*, on the occasion of expeditions. For this purpose a sum of money or other goods was given to a woman, and a marriage was contracted with her for a definite period, after the expiration of which the marriage was again dissolved. This kind of marriage is known as *mut'ah* ('to make use of'). The second Khalīf, 'Umar, forbade these temporary marriages; he apparently regarded them as practically fornication: 'Let no one be brought to me who has married a wife for a limited period,' he said, 'for, if so, I will have him stoned.' According to a later tradition, the Prophet himself withdrew his permission. Orthodox Muslims regard *mut'ah*-marriages as forbidden; the Shī'ites still continue to regard them as permissible.[1]

But later Muslims began to idealize the Prophet. They could not admit that he had been subject to mistakes and weaknesses just like other men, and they could not allow that any doubt existed on this point. It was necessary to have full security that men were not following an erroneous line when they accepted the *sunnah* of the Prophet. An attempt was made to find proofs for the infallibility (*'iṣmah*) of the Prophet, and it was thought that this could be discovered in many verses of the Qur'ān—*e.g.*, in those in which God enjoins obedience not only to Himself, but also to Muhammad, His representative. There was also a tradition which made the Prophet declare expressly: 'My community shall not err when they hold fast in everything to Allāh's book and to my *sunnah*.'

According to Muslim theory, the *sunnah* of the Prophet consists of three elements: (1) his *qawl* (decisions); (2) his *fi'l* (manner of conduct); and (3) his *sukūt* or *taqrīr* (tacit approbation of the deeds and words of others).

Generally behaviour according to the *sunnah* of the Prophet is as indispensable a duty for a Muslim as obedience to the regulations of the Qur'ān. The only exception to the general rule is formed by those cases in which God had permitted exceptional freedom to His messenger; *e.g.*, Muhammad had more than the number of wives permitted by the law, and in such special cases it is naturally regarded as forbidden to follow the example of the Prophet. Some European writers have erroneously imagined that what the *sunnah* prescribes has not a binding power in the same degree as a command in the Qur'ān. On the contrary, Muslim scholars even assume that some regulations of the Qur'ān are altered or cancelled by later decisions or acts of the Prophet which contradict them. In Qur'ān, ii. 176, *e.g.*, it is ordained that legacies may always be left to parents and near blood-relations; but this rule is regarded as cancelled, because, later on, according to tradition, after the regulation of inheritance *ab intestato*, Muhammad said: 'No will may be made for the benefit of heirs whose share in the estate is fixed.' Although the Qur'ān, xxiv. 2, prescribes only scourging as the punishment for fornication, adulterers must, according to the canon law, be in some cases stoned to death. This last punishment is based exclusively on the *sunnah* of the Prophet, which in this case has altered the regulation of the Qur'ān.

(3) *The ijmā'*.—By the time that a firm conviction had been formed in the schools as to the main rules of the *fiqh*, this general feeling began to be regarded as a new argument for the validity of the doctrine. It was declared to be impossible that rules as to which all *faqīhs* had the same opinion could be based on error, and thus the *ijmā'* ('general agreement of opinion') of the scholars must be an incontrovertible proof of the correctness of their views. There could, so men thought, no longer be any doubt, even as to subjects on which there was originally a difference of opinion, so soon as all scholars were agreed on them. Their unanimous opinion must for the future be reverenced by every one as the truth.

The doctrine of the infallibility of the *ijmā'* at first met with much opposition. Many refused to concede binding authority in religious matters to the opinions of fallible men, even when they were agreed in their judgment. Nevertheless a tradition arose later, according to which the Prophet himself had declared: 'My people shall never be unanimous in error.' It was also thought possible to find arguments for this opinion in some verses of the Qur'ān. In iv. 115, *e.g.*, punishment is threatened on those 'who separate themselves from the Prophet' and 'do not follow the way of the faithful,' and this 'way of the faithful,' it was said, was obviously nothing else than that for which unanimity had been already obtained in Islām.

The earlier Muslims had already attached great importance to the *ijmā'* of 'the companions of the Prophet' (*ṣaḥābah*). It was thought that those who belonged to the generation which had been so extraordinarily favoured by the blessing of personal acquaintance with Muhammad must have been completely permeated by the true spirit of Islām, and it was thus impossible that they could have been unanimous in error. Later on, Mālik ibn Anas laid special emphasis on the general agreement of opinion of the scholars of Medīna. In that holy city, he thought, the *sunnah* of Islām must have undoubtedly been preserved in its purest form. Thus, when all the scholars in the city of the Prophet were agreed in their opinion, this could not be erroneous. Others applied the same reasoning to the *ijmā'* of the scholars in both the holy towns—Medīna and Mecca. In the end, however, consideration had to be given also to the *faqīhs* in other places. There was no sufficient reason for limiting the authority of the *ijmā'* exclusively to the opinion of the *ṣaḥābah* and the scholars in the holy cities. Thus the *ijmā'* came to mean in Islām the agreement of all scholars who could be regarded as competent to judge in matters of religion.

The *ijmā'* must be regarded as the most important of the *uṣūl*. It became in the end the infallible basis for the whole doctrine of Islam.[1] It gave Muslims security also that the *fiqh* was correctly deduced from the sacred texts. It is true that, with regard to many details of the canon law, there remained a difference of opinion between the four *fiqh*-schools; but, as has already been noticed, all orthodox Muslims came later to recognize that as to these questions different opinions were possible. It was agreed that the doctrine of each of the four *madhhabs* gave a correct view of the canon law, and, in consequence, it was possible to say that the *ijmā'* itself had sanctioned even those regulations as to which the four *fiqh*-schools cherished different opinions. Moreover, everything which afterwards, under changed circumstances, became a rule was held to be justified when all were agreed about it. Customs and doctrines cannot be heresies for the true Muslim, provided that all orthodox *faqīhs* sanction them, even if they are not based on the Qur'ān or the *sunnah*. Those who do not honour customs sanctioned by the *ijmā'*, such as the Wahhābites, are regarded by the orthodox Muslim as heretics.

(4) *The qiyās.*—Of the different methods of argument according to which some rules of the *fiqh* were established only the *qiyās* was recognized as a fourth infallible foundation for the *fiqh*. The other methods, such as *istiḥsān*, *istiṣlāḥ*, and *istiṣḥāb*, were not approved by the majority of Muslim scholars.

[1] On the so-called *mut'ah* see G. A. Wilken, *Das Matriarchat (das Mutterrecht) bei den alten Arabern*, Leipzig, 1884, pp. 9–16; and J. Wellhausen, 'Die Ehe bei den Arabern,' in *GGN*, 1893, p. 464 ff.

[1] See especially C. Snouck Hurgronje, 'Le Droit musulman,' in *RHR* xxxvii. [1898] 15 ff.; I. Goldziher, 'Die Religion des Islams,' in *Die Kultur der Gegenwart*, Leipzig, 1906, I. iii., 1st half-vol., pp. 105–107.

To prove that the *fiqh* might really be based on analogy, an appeal was made to various texts of the Qur'ān and tradition. According to some traditions, the Prophet had instructed Mu'ādh, his governor of Yaman, to keep in general to the Qur'ān and the *sunnah*, but, in cases in which this was not possible, to behave according to the analogy of these sacred texts. Since, later on, all orthodox scholars were agreed that the *qiyās* was permissible, no further doubt on the point was possible. Thus, for later generations in the orthodox Muslim world, the doctrine that the *qiyās* is a fourth infallible foundation of the *fiqh* is based on *ijmā'*.

Some orthodox scholars were of opinion that the general custom (*'urf*) should also be regarded as a basis for the *fiqh*. As a matter of fact, many *faqihs*, from ancient times, had been careful, in establishing the regulations of the *fiqh*, to take into consideration the general customs of Muslims; but it has never become a rule to regard the *'urf* as a fifth infallible foundation of the *fiqh*.[1]

Muslim writers have written extensive works about the *uṣūl al-fiqh*, which treat of the different methods by means of which the rules of the *fiqh* may be established. Most *faqihs* make no special study of this science, but content themselves with the condensed statements as to the *uṣūl* which may be found in the *fiqh*-books.

4. Summary of the contents of Muslim canon law.—The chief regulations of Muslim canon law may be divided into two classes: (1) those regarding religious worship and ritual duties; and (2) those regarding civil, penal, and public law.

The regulations belonging to the first class deal in the first place with the five *'ibādāt*, *i.e.* the ritual actions by which Allāh is to be worshipped. They are (i.) the *ṣalāt* (the ritual prayer, mainly consisting of prostration, praises of the Creator, etc.); (ii.) the *ṭahārah* (the ritual purification, which must be specially gone through before the *ṣalāt* is performed, but which is also required in other cases in which a believer must be in a ritually pure condition); (iii.) the *zakāt* (originally almsgiving, which was afterwards fixed by definite rules and became a kind of religious tax); (iv.) the *ṣawm* (fasting, especially in the month of Ramaḍān); and (v.) the *ḥajj* (the annual pilgrimage to Mecca).

These five *'ibādāt* are always treated in the first five chapters of the *fiqh*-books, according to the usual division of these works which has obtained since ancient times. They belong at the same time to the 'pillars' of Islām, *i.e.* to the principal duties of a Muslim. Originally also the *jihād* (the 'sacred war' against unbelievers) was regarded by many Muslims as a 'pillar' of Islām. This opinion is still held by the Khārijites, who are, however, regarded as heretics. According to orthodox Muslims there are only five 'pillars' of Islām. One of these is the *ṣalāt*, including the *ṭahārah* connected with it. The *zakāt*, the *ḥajj*, and fasting belong also to them, and the fifth 'pillar' is the confession (*shahādah*), consisting of the well-known 'two words': 'I confess that there is no God but Allāh, and that Muhammad is the messenger of Allāh.' For it is reported in tradition that the Prophet said: 'Islām is built on five [*sc.* foundations]: on the *shahādah*, the *ṣalāt*, the *zakāt*, the *ḥajj*, and fasting in the month of Ramaḍān.'

The subjects connected with the belief in Allāh were so numerous, and the controverting of manifold heresies on this point came in time to extend so far, that the doctrine regarding the first 'pillar' (the *shahādah*) developed into a separate branch of science, the *'ilm al-tawḥīd* or *'ilm al-kalām* ('knowledge of the unity of God' or 'doctrine of faith'). In the *fiqh*-books only the four other pillars are discussed. In connexion with the daily *ṣalāt*, the *fiqh*-books also deal with the whole worship in the mosque, the service on Friday and on the two *'īds* (*i.e.* feasts: the 'great' feast on the tenth of the last month, *Dhū'l-ḥijja*, and the 'small' feast on the first of the 10th month, *Shawwāl*); further, they deal with various special *ṣalāts*—*e.g.*, the *ṣalāt al-istisqā'* (the *ṣalāt* by which Allāh is asked for rain in times of great drought), and the *ṣalāt* at the eclipses of the sun and moon.

Besides these chief duties, a Muslim must observe numerous other religious prescriptions, and abstain from many actions which are regarded by canon law as blameworthy, or even strictly forbidden. These prescriptions may be found in nearly all the chapters of the *fiqh*-books. They treat chiefly of: (i.) the religious ceremonies on various occasions in Muslim domestic life—*e.g.*, child-birth, circumcision, marriage, and death; (ii.) the ritual purity of persons and objects, the ritual slaughter, the lawful food and drink, etc. These regulations are followed by various others—*e.g.*, concerning the prohibition of images of living beings, of superfluous luxury (the use of gold and silver dishes, the wearing of silk clothes by men, etc.), of various games and pleasures, and concerning permissible and forbidden music. The *fiqh*-books specially deal with some of those regulations in the chapter on the *walīmah* (the religious meal at the marriage-feast and on other occasions); for, if any of the rules mentioned in the *fiqh*-books are infringed, the religious character of this meal is lost.

The regulations of the second division chiefly concern marriage, divorce, relationship and the rights and duties connected with it, guardianship, inheritance, and slaves and freedmen; also contracts (sale, hire, partnership, commission, etc.), warrants, the obtaining of property and other rights, the prohibition of taking interest (Muslim law regards this as 'usury'); oaths and vows and all connected with them; testamentary dispositions and the *waqfs* (dispositions by which certain goods are withdrawn from trade in order to be reserved for definite religious aims or for a special number of persons); furthermore, the right of retaliation and the redemption of it by payment of a ransom; legal procedure, and the law of evidence; finally, the duty of believers to take part in the *jihād*, the rights and duties of unbelievers living in Muslim lands, and the appointment of an *imām* (chief of the Muslim community), his rights and his duties.

It is not the aim of all the regulations of the law to give absolute commands or prohibitions; in many cases it is only suggested that it is advisable from a religious point of view to perform or to omit some action. Five classes of regulations may be distinguished; they are called *al-aḥkām al-khamsah*, *i.e.* 'the five legal categories.' (i.) A deed may be obligatory (*wājib*, 'necessary,' or *farḍ*, 'prescribed'). Only the Ḥanifites recognize a difference between *wājib* and *farḍ*. They apply the term *farḍ* to all that is prescribed by the Qur'ān or by the tradition, if the meaning is beyond doubt; and *wājib* to that which, in case of doubt, is obligatory only according to the most probable view. Duties to be observed by every Muslim individually are called *farḍ al-'ain* (or *farḍ 'ala 'l-'ain*); duties to be observed only by a certain number of Muslims collectively are called *farḍ al-kifāyah* (or *farḍ 'ala' l-kifāyah*)—*e.g.*, the daily *ṣalāt* in the mosque and the sacred war against 'unbelievers.' (ii.) A deed may be commendable or meritorious (*sunnah*). A Muslim will be rewarded if he observes these regulations, but he will not be punished if he neglects them.

It has been supposed by some scholars that the actions belonging to this class were called *sunnah* as being derived from the *sunnah* of the Prophet. But this is incorrect. It is indifferent for what reason an action is recommended in canon law. Muslim jurists of one *fiqh*-school sometimes call a deed *sunnah*, in order not to disagree wholly with the doctrine of another *madhhab*, which calls the same deed obligatory. A deed may also be *sunnah* because it was recommended in a verse of the Qur'ān; on the other hand, the imitation of a deed of the Prophet is often 'obligatory.' Other words that are used in the same sense as *sunnah* are *mustaḥabb* ('desirable'), and *mandūb* ('recommended').

(iii.) A deed may be permissible (*mubāḥ* or *jā'iz*) or (iv.) objectionable (*makrūh*); the latter actions are better avoided, but a Muslim is not punished if he commits them. (v.) A deed may be forbidden (*harām*); the committing of this action is punished. The action which is forbidden may at the same time be 'valid' (*saḥīḥ*)—*e.g.*, if one steals water and with it fulfils the ritual purification; this action is 'valid,' although stealing is forbidden. An 'invalid' action is called *bātil*.

Notwithstanding the great lack of knowledge and the negligence of most Muslims, in all Muhammadan lands that part of the canon law which deals with religious duties and ritual is more or less faithfully observed. According to the popular conscience, some actions are even regarded as

[1] Cf. I. Goldziher, *Die Ẓāhiriten*, p. 204.

obligatory which have not so important a place in canon law. On the other hand, most Muslims neglect without scruple many duties that are really prescribed as 'obligatory.'[1] In general, the whole Muslim world is especially faithful to certain food-laws (*e.g.*, abstinence from pork), to circumcision, and to other religious customs by which a Muslim is externally distinguished from the followers of other religions. In the canon law these are not regarded as 'chief duties,' but in practice they play the part, to a certain extent, of the real 'pillars' of Islām. Other duties are neglected by most people, particularly those which are to be daily observed—*e.g.*, the *ṣalāt*. One country, however, is stricter than another.

The regulations regarding civil, penal, and public law generally proved to be only ideals that were practically unattainable. It is true that, according to the theory of the law-books, these regulations are in all respects of equal value with the prescriptions concerning religious duties, and every Muslim is bound to regard them as obligatory, but in practice it is impossible to observe them, particularly those which concern commercial and other contracts. Everywhere the demands and customs of the commercial intercourse and local manners and customs prevent even the most pious Muslim from observing these regulations; very often the observance of them is hindered by the arbitrary behaviour and tyranny of the local authorities. Pious Muslims often ask the advice of able lawyers as to the religious rules concerning matters of commerce, but in practice they find themselves compelled to act contrary to this advice.[2] Only the regulations concerning marriage and family life are faithfully observed by most Muslims as far as it is made possible by the different circumstances in each land.[3] Hence a twofold law usually obtains in Muslim countries. Alongside of canon law the local customary law (*'ādah*), and regulations of the local government, have in practice very great influence. Consequently there are usually two kinds of procedure. Besides the *qāḍī*, *i.e.* the judge, who judges according to the regulations of the *sharī'ah*, we find everywhere other magistrates, who inflict punishment and give decisions according to local manner and customs and local regulations. The influence of these magistrates is generally the more important. The *qāḍī* decides only those questions which are generally admitted to be immediately connected with religion, and which for this reason have to be decided according to the *sharī'ah*. These questions are specially matters concerning family life, marriage, inheritance, and donations and endowments for religious purposes.

In the following pages the regulations of Muslim canon law regarding civil and public law are dealt with only so far as they are really of practical importance for the Muslim (cf. also the 'Muhammadan' sections of artt. CRIMES AND PUNISHMENTS, ADULTERY, APOSTASY, etc., to which reference is made below).

The doctrine of the Shāfi'itic *madhhab* will form the general basis of our description of the religious regulations of the Muslim canon law; only in dealing with matters of particular importance we shall refer also to the divergent opinions of other *fiqh*-schools (esp. those of the Ḥanifites and the Mālikites).[4]

Macdonald, *Development of Muslim Theology, Jurisprudence, and Constitutional Theory*.

II. *MARRIAGE, KINSHIP, LAW OF INHERITANCE, SLAVES.*—**5. Marriage.**—(*a*) *The marriage contract.*—In ancient times in Arabia the husband used to buy his wife from her nearest kinsman (*walī*, 'nearest'). He could give her in marriage to whom he liked, and he received the dowry, which was regarded as a sale price. By paying this sale price the bridegroom became the owner of the bride. In some Arabic Bedawīn tribes we find these customs even at the present time, with very little modification.[1]

In some parts of Arabia, however, the original form of marriage by sale and the patriarchal family customs connected with it were already so far modified in the time of Muhammad that it was customary to pay the dowry to the bride herself; and it was regarded as objectionable if her *walī* desired to keep this gift wholly or partly for himself. So, according to the Qu'rān (*e.g.* iv. 28), the Muslims had to regard the dowry as a 'reward for the wife,' and no one was allowed to withhold it. It seems, however, that the nearest kinsman in Muhammad's days was entitled to give a girl in marriage to whom he liked, even against her will. As several women complained of this to the Prophet, he is said to have issued a command that in future in ordinary cases every *walī* must ask the agreement of the bride to her marriage.

No marriage is valid without being preceded by the making of a proper marriage contract (*'aqd al-nikāḥ*). Even at the present day, the *walī* usually is the only person entitled to make this marriage contract with the bridegroom.

The Ḥanifites allow a woman to make the marriage contract herself, or to appoint a proper person to do so in her name, if she is of age and is not under guardianship. The Shāfi'ites, on the other hand, hold that neither a minor woman nor even a woman of full age is entitled to do this; only her *walī* has the right to marry her to any one; but he is at the same time generally bound to give his co-operation if she desires it of him. Mālikites, like the Ḥanifites, consider that the woman who is of age is entitled to make her own marriage contract, unless she belongs to a distinguished family, or, in consequence of her beauty or other qualities, is an exceptionally desirable match; in the latter case she may be united in marriage only through her *walī*. The only case in which the *walī* has the right to oppose a marriage is when the woman desires to marry a man who is not her 'equal' (Abū Ḥanīfah also allowed him this right if the bridegroom was unable or unwilling to pay a suitable dowry, but this opinion was rejected by his two pupils, Abū Yūsuf and Muhammad); for the *walī* has to protect the honour of the family. The 'equal' of a woman is called her *kuf'*.

The theories of the various *fiqh*-schools about the equality (*kafā'ah*) disagree. The Shāfi'ites and Ḥanifites pay special attention to (1) *birth*: an Arab is considered of greater distinction than any non-Arab, and among the Arabs the tribesmen of Muhammad—the Quraishites—rank highest, the relatives of the Prophet being the most distinguished; (2) *profession*: the *fiqh*-books contain numerous regulations on this subject. The profession of *faqīh* is regarded as specially distinguished; if the profession of the bridegroom is inferior to that of the father of the bride, the former is no *kuf'* of the bride. No emancipated slave can be considered as the *kuf'* of a freewoman, any more than a *fāsiq* is that of a woman who is *'adl*.[2] On the other hand, it is

[1] J. L. Burckhardt, *Notes on the Bedouins and Wahabys* London, 1831, i. 263, 272; A. Musil, *Arabia Petræa*, Vienna, 1908, iii. 180, 184.
[2] Everybody that is not *'adl* is called *fāsiq*. When a person is *'adl*, it means that no great sin has been committed by him, and that he does not usually infringe the less important regulations of canon law. Even although he has infringed these less important regulations, a person still may be *'adl* if he fulfils the greater part of his other religious duties devoutly. This atones

wholly indifferent for this purpose whether the bridegroom is equal in wealth to the father of the bride or not. In matters of *kafā'ah* the Mālikites do not judge according to the origin or profession of the bridegroom, but exclusively by his conduct and faith. As a rule, the various regulations of canon law concerning the *kafā'ah* are of no practical importance for the present-day Muslims. Marriages which would be considered *mésalliances* according to the theory of the law very often are considered by the wife and her *walī* as honourable. An exception to this rule is made by the *sayyids* or *sharīfs*, the descendants of the Prophet. In some countries (*e.g.*, the Dutch Indies) they refuse to marry their daughters to men who are not related to them, because of their distinguished origin.

The various *fiqh*-schools differ as to the cases in which the *walī* has still in Islām the right of making a marriage contract without the permission of the bride.

The Shāfi'ites hold that the *walī* as a rule has no right to give the bride in marriage without her permission. A minor girl, therefore, cannot be given in marriage by her *walī*, for she is not able to give a valid permission. According to the Shāfi'ites, only the father or, failing him, the paternal grandfather is entitled to compel his daughter (or granddaughter) to a marriage, if she is still a virgin, whether she be a minor or of age. For this reason they call the father and the grandfather *walī mujbir* (*i.e.* 'compelling' *walī*). Nevertheless the doctrine even of the Shāfi'ites always regarded it as commendable (*sunnah*) that the *walī mujbir* should ask the permission of the bride before giving her in marriage. Further, he is not entitled to compel her to marry if she declares that she is not a virgin—this declaration is accepted as true without further proof—or if there is enmity either between himself and the girl or between the girl and the man with whom he wishes her to join in marriage. The *walī mujbir* is not entitled to give the bride in marriage to anybody who is not her 'equal' (*kuf'*), or who is not able to pay a 'sufficient' dowry (*mahr al-mithl*).

According to the Ḥanifites and Mālikites, women under age may be given in marriage without their permission; this may be done by their father or, failing him, by a more distant kinsman on the paternal side. In the latter case the Ḥanifites permit them to demand dissolution (*faskh*) of their marriage when they come of age.

According to the Ḥanifites, women of full age cannot be compelled to a marriage by any one; and, according to the Mālikites, they may be compelled only by their father (not by the grandfather) so long as they are still virgin. Only the father is thus, according to the Mālikite system, *walī mujbir*.

The *walī* must be not only the 'nearest' kinsman,[1] but also an adult and a free Muslim in full possession of his intellectual powers and (at least according to the Shāfi'itic school) not a *fāsiq*. If he does not satisfy these conditions, his right passes to the next kinsman. If none of the persons just mentioned is qualified to become *walī*, or if there is no kinsman, or the kinsman unlawfully refuses to be *walī*, the magistrate (*ḥākim*) is regarded as the *walī* of the bride. According to tradition, the Prophet said: 'The magistrate is *walī* of her who has no *walī*.' The *fiqh*-books do not indicate which of the magistrates is then the competent *walī*; in many Muslim countries in this case the marriage contract is made by the *qāḍī*. If there is no magistrate living in the place where the marriage is to be contracted, the bride and bridegroom are allowed to hand over this function to some proper person. Such a man is called *ḥakam* (which is also the title of an arbiter in a lawsuit). Parties are entitled to choose another person as *ḥakam* even if a competent magistrate is living in the place, but in this case the *ḥakam* who is chosen is allowed to act as a substitute for the real magistrate only if he satisfies the conditions of a *qāḍī* in every respect.

The bridegroom is not generally represented by a *walī* in the making of a marriage contract—he does it himself. The contract is made by his *walī* only if he lives under guardianship as a minor. According to the Shāfi'ites, boys under age can be married only by their *walī mujbir* (their father or paternal grandfather), for they are supposed to be unfit to give their permission for the marriage. The Ḥanifites and Mālikites, however, allow other relatives also to do this.

for his small sins. But, if he confesses heretic opinions, he ceases to be *'adl*.

[1] The opinions of the different *fiqh*-schools disagree as to the order in which the kinsmen of the bride are entitled to be regarded as her nearest kinsman (cf. § 7 (*b*)).

If the bridegroom lives under guardianship for other reasons (*e.g.*, bankruptcy), he can be married only by the mediation of his guardian.

By the marriage contract the *walī* or other representative of the bride declares her to be given in marriage to the bridegroom (this declaration is called *ījāb*, 'the offer'); and the bridegroom declares that he takes her as his wife (this declaration is called *qabūl*, 'acceptance'), and that he will pay her a certain sum as dowry. *Ījāb* and *qabūl* must follow each other immediately, as in all other contracts.

According to the Shāfi'ites, in the making of the contract parties are not allowed to modify the legal rights and duties of married couples. Either husband or wife, indeed, is allowed to renounce later on the rights to which they are entitled by the law, but it is not permitted to bind oneself to this beforehand; *e.g.*, if the man bound himself beforehand not to marry a second wife, or if the wife renounced her right of being supported by her husband, then these conditions would be null and void. In this case the marriage contract remains valid, unless conditions were made which would be contrary to the aim of a marriage (*i.e.* not to have children); in that case both the condition and the marriage are considered void. In other *fiqh*-schools these questions are partly decided in another way.

For the *walī* of the bride it is *sunnah* to make a speech (*khuṭbah*) when the marriage contract takes place. If possible, this speech is made in Arabic, and must glorify God, bless His Prophet, give pious admonition, and recommend marriage. According to the Shāfi'ites and the Ḥanifites, the contract must be made in the presence of trustworthy witnesses, who must satisfy certain demands of the law. The Mālikites, however, only demand that the marriage shall not be kept secret.

Assistance of a clergyman is not required in Islām for the making of a marriage contract, but usually the aid of a person who has a special knowledge of the regulations concerning marriage is invoked. Only in this way do Muslims feel that the marriage is guaranteed not to be null and void. Thus we find in nearly all Muslim countries persons who make a profession of assisting at the marriage contracts. In different countries these men are called by various names (*e.g.*, *mumlik* in Mecca).[1] Sometimes such a person dictates to the parties the words that are to be pronounced by them, but in most cases he appears exclusively as a representative (*wakīl*) of the *walī* of the bride. Then he need only dictate to the bridegroom the required formulæ. If the bridegroom and the *walī* of the bride possess a sufficient knowledge of the regulations of the canon law, they may make the marriage contract themselves without the assistance of a professional officiator.

In the art. WORSHIP (Muslim) the religious ceremonies connected with marriage will be dealt with, such as the *walīmat al-'urs* (*i.e.* the marriage feast, which originally was probably a sacrificial meal).

It remains to mention only that bride and bridegroom are not allowed to contract a marriage if they are in the state of *iḥrām*, *i.e.* the state of religious consecration and abstinence which the law makes obligatory for those joining in the yearly pilgrimage (*ḥajj*).

(*b*) *The dowry.*—The dowry given by the bridegroom to the bride has still its old Arabic name *mahr* (cf. Heb. *môhar*). By this word was originally meant the price which was paid to the *walī* of the bride. Another name for the dowry is *ṣadāq*. Because of the general meaning of the Arab. verb *ṣadaqa* and its derivatives, we may assume that the *ṣadāq* was originally the amount deposited by the bridegroom as a guarantee of his trustworthiness, and held by the *walī* of the bride if the bridegroom broke his promise. Later on no distinction was made between *mahr* and *ṣadāq*, and Muslim scholars generally regard these words as synonymous in every respect.

The amount to be paid by the bridegroom as dowry depends on the conditions upon which parties agree when the marriage contract is made. There are three possible cases. (1) There is no condition between parties as to the amount of the *mahr*. (2) It is expressly stated that the fixing of the amount of the present to the bride is left to the

[1] Cf. C. Snouck Hurgronje, *Mekka*, ii. 161. *Mumlik* is literally the person who 'makes' the bridegroom 'owner' of the bride.

pleasure of the bridegroom. (3) A fixed sum is mentioned. In the first case a bridegroom is obliged to give his bride a *mahr al-mithl*, *i.e.* a dowry suitable to her position and also dependent on the social position, descent, age, intelligence, beauty, and other qualities of the bride, for which she may be reckoned as a more or less desirable match. The agreement by which the *mahr* is expressly left to the pleasure of the bridegroom is called *tafwīḍ* ('to leave over to somebody'). The *walī* of the bride can leave the fixing of the amount of the dowry to the bridegroom only if the bride has expressly empowered him to do so, and she may do this only if she is of age and has the free disposal of her fortune. In the third case the amount of the dowry is precisely stated in the contract. Then the dowry is called *mahr musammā*.

According to the Shāfi'ites, it is *sunnah* to fix the amount of the dowry in this way, the parties not being bound by legal regulations concerning the amount, except that it is necessary that the amount of dowry desired by the *walī mujbir* of the bride be at least equal to a *mahr al-mithl*. The Ḥanifites and Mālikites hold that the dowry must always represent a certain minimum value. They disagree, however, as to the exact amount of this minimum. The Ḥanifites say that it is not allowed to give less than a golden *dīnār* or 10 silver *dirhāms*. The Mālikites hold that the minimum is one quarter of a golden *dīnār* or 3 silver *dirhāms* (cf. the same difference between these two *fiqh*-schools where the minimum value of stolen property is concerned, as discussed in art. CRIMES AND PUNISHMENTS [Muhammadan], § 5 (3)).

It is not necessary to pay the dowry at the time when the marriage contract is made. Usually only a portion (*e.g.*, the half) of the *mahr* is paid before the marriage; but the customs vary in different lands. The remainder is paid later in case of divorce or of the death of one of the couple. According to the Shāfi'ites, it is usual to pay to the bride before the marriage two-thirds or at least half of the dowry.

This custom of paying only a part of the dowry before the marriage probably dates back to the pre-Islāmic period. We may assume that the original purpose was to prevent the loss of all connexion between the wife and her family. In many countries in which the custom of buying a wife exists, if she is ill-treated by her husband, the relatives of the wife do not lose the right to protect her until the full dowry is paid.[1]

The bridegroom has to pay half the dowry to the bride as damages if he breaks the marriage contract by afterwards refusing to take her as his wife. If the amount of the dowry was expressly left to the pleasure of the bridegroom by means of *tafwīḍ*, he is obliged, according to the Shāfi'ites and the Ḥanifites, to give a 'present' as compensation to the rejected bride. This present is called *mut'ah* because of the name given to this compensation in Qur'ān, ii. 237–238. The Mālikites also hold that this 'present' of the bridegroom is not obligatory, but they regard it as *sunnah* for the bridegroom.

(*c*) *The lawful obstacles to marriage.*—The principal circumstances which can prevent the contraction of a marriage are the following five.

(1) An already existing marriage. A free Muslim may not contract a new marriage so long as he has already four wives; a woman may be married to only one man at once. Polygamy is permitted in Islām only within these limits; it existed in Arabia from antiquity and was not done away with by the Prophet. In Qur'ān, iv. 3, in which believers who had embezzled the property of orphans entrusted to them were enjoined to live in a simple manner, the following words are found:

'If ye fear that ye will be unable to give the orphans what is theirs, marry so many wives as is good for you—two, three, or four; and if ye still fear (in spite of this) that ye will be unable to act suitably, marry only one wife or take slaves: that is better, that ye be not inclined to evil.'

These words were interpreted by the later Muslim *faqīhs* in the sense that no Muslim may possess more than four wives at once. And there was a tradition that the Prophet had expressly authorized this interpretation. It was, indeed, known from tradition that Muhammad himself had more than four wives at once, but men explained this later as one of the special privileges which God had given only to His messenger.

(2) Too close relationship. A Muslim is forbidden to marry his female relatives in the direct line (ascending and descending), his sisters and the female descendants of his brothers and sisters, and his aunts and great-aunts on both the paternal and maternal sides. A relative (man or woman) whom it is forbidden to marry is called *maḥram*; *e.g.*, a man is his daughter's *maḥram*. Relationship-in-law (the relation between a married person and the relatives of his or her consort in consequence of marriage) is an obstacle to marriage. A Muslim may not marry his female relations-in-law in the direct (ascending and descending) line—*e.g.*, his mother-in-law, daughter-in-law, step-daughter, etc. —nor can he have two sisters or an aunt and niece as wives at the same time. In the fourth place, foster-relationship is also a hindrance to marriage, on the ground of Qur'ān, iv. 27.

No one may marry either a woman who has suckled him or his foster sisters (*i.e.* women who have been suckled by the same woman as suckled him). Foster-relationship is held to exist between a man and all his descendants on the one side and the woman who has suckled him, all her relations (either blood-kin or foster-kin), her husband, and all his relations (both blood-kin and foster-kin) on the other side. This foster-relationship, on the ground of a decision of the Prophet, is an obstacle to marriage within the same degree of relationship as with blood-relations. On the other hand, there is no foster-relationship (*a*) between the woman who suckled the child and the ancestors or side-relations of that child; or (*b*) between the child and the ancestors or side-relations of children who were suckled by the same woman.

These regulations concerning the obstacles to marriage caused by kinship are in general deduced from Qur'ān, iv. 26–27 (cf. also xxxiii. 49 and xxiv. 30–31). The ordinances made in these two verses of the Qur'ān were at least partly new to the Muslims, as may be seen from the words found at the end of Qur'ān, iv. 27, in which permission is expressly given to regard as lawful the marriages which had been previously contracted contrary to these restrictions.

(3) Difference of religion. In Qur'ān, ii. 220–221, it is forbidden for Muslims to contract a marriage with unbelievers. To that prohibition there were originally no exceptions:

'Marry no heathen women before they have become believers; a believing slave is better than an unbelieving free woman, even though she please you. Give also your female relations in marriage to no unbelievers before they have become believers; a believing slave is better than an unbelieving free man, even though he please you. They (the unbelievers) take you to hell, but God takes you to paradise and forgiveness.'

Later on, one exception was admitted, and Muslim men were allowed to marry women who belonged to a so-called people 'of the book' (*ahl al-kitāb*). By the *ahl al-kitāb* must be understood people, such as Jews and Christians, to whom, according to Muhammad's view, the same religion had previously been announced as he made known to his own people, the Arabians.

See Qur'ān, v. 7: 'Now are all free women permitted to you, both among the Muslims and among those who have received sacred books before you.'

In distinction from the other *fiqh*-schools, the Shāfi'ites regard marriage of women of the *ahl al-kitāb* as permitted only if these *ahl al-kitāb* had accepted their religion before the Qur'ān was revealed, and also had not corrupted it. So, according to the Shāfi'ites, a Muslim may not marry an English woman, because the English, though they belong to the *ahl al-kitāb*, accepted Christianity after Muhammad's time.

(4) A man and woman who are separated from each other cannot as a rule contract a new marriage with each other if the former marriage was dissolved either because the man had three times repudiated his wife, or because he had accused her of adultery by means of the *li'ān* (the swearing of a solemn oath). As to these two cases see § 6 (*a*) and (*b*), in which the exceptions to the general rule are also discussed.

(5) Women may not contract a new marriage

[1] The following example shows that this view was not entirely unknown even to the Muslim scholars: if a man leaves his native town and goes elsewhere, according to Abū Ḥanīfah he may take his wife with him only if he has paid her the whole of the *mahr*.

within a certain period after the dissolution of a former one. This period is called *'iddah, i.e.* properly 'the number' (viz. the number of days). If the marriage was dissolved by the decease of the husband, according to Qur'ān, ii. 234, the wife must wait four months and ten days. A similar period of mourning after the death of the husband existed among the Arabians in the heathen period; but it was then customary, at least in some Arabian tribes, for the widow to seclude herself in a small tent for a full year after the death of her husband; during this time she might not purify herself.[1] The *'iddah* after divorce was, on the other hand, probably first introduced by Muhammad. According to Qur'ān, lxv. 4, the wife may not marry again within the limit of three *qurū'*, if her marriage was dissolved by divorce. According to Abū Ḥanīfah, *qurū'* must be taken to mean menstruation; according to the Shāfi'ites, Mālikites, and others, it is the period of a woman's cleanness between the periods of menstruation. If the woman has no menstruation, the *'iddah* is reckoned at three months. When a woman is pregnant at the dissolution of her marriage, she may in no case marry again before her confinement.

Difference in position is, as a rule, no obstacle to the contraction of a marriage, since it is in no case regarded as scandalous for the bridegroom to marry a woman of lower rank; and even a woman may contract a valid marriage with a man who is not her *kuf'*, if neither her *walī* nor she herself has any objection.

Youth is usually no hindrance according to Muslim law. Child-marriages were not forbidden in Muhammad's day, and even the Prophet married 'Ā'ishah, the daughter of Abū Bakr, when she was only six years old. But, according to the Shāfi'ites, only the *walī mujbir* (the father, or, failing him, the paternal grandfather) is qualified to give his children (or grandchildren) in marriage before their majority. According to the other *fiqh*-schools, more distant relations have the same right if the ancestors of the children under age are deceased. Children under age, therefore, cannot marry, according to the Shāfi'ites, if they have no father or grandfather. See, however, § 2 (at the end) as to the *taqlīd* which is applied in such a case.

(*d*) *Mutual rights and duties of married people during marriage; īlā' and ẓihār.*—No community of goods between the married couple is brought into existence by marriage. Each keeps the ownership of that which was possessed at marriage, and of that obtained during marriage by labour, endowment, inheritance, or in any other way. The wife keeps the right, during her married life, of disposing of her possessions and of making contracts. She does not in that respect come under the guardianship of her husband. The husband is obliged to support his wife according to her position, and to give her food as well as clothing, residence, and service consistently with the appropriate customs. This legal and obligatory support is called *nafaqah*. If the husband is not able to give the legal support to his wife, she is entitled to demand divorce (*faskh*), but in that case she has to prove that her husband is really not able to give her *nafaqah*. If the husband is able to support her, but refuses to do so, the judge must try to induce the husband to fulfil his duty, if the wife requires him to do so.

A husband who is married to more than one wife must not spend more time in the rooms of one wife than in those of another. The husband is also particularly forbidden in the law-books to swear an oath to abstain from sexual intercourse. The taking of such a vow of abstinence was called *īlā'* ('to swear'). In the pre-Islāmic period the Arabs regarded this *īlā'* as a kind of divorce, by which, however, the marriage was not fully dissolved. Although the woman was thus neglected, she could not contract a new marriage before her husband had definitely repudiated her, and this he generally refused to do before he had been paid a certain sum as ransom.

This *īlā'* was forbidden in Qur'ān, ii. 226 f. Any one who had taken such a vow of abstinence was for the future obliged to repudiate his wife after the expiration of four months, if he was then still unreconciled to her. According to the Ḥanifites, after the expiration of four months the marriage is *ipso facto* legally dissolved if no reconciliation has taken place; but, according to the Shāfi'ites and Mālikites, it must in this case be dissolved by the *ḥākim* if the man refuses to repudiate his wife of his own accord. If the husband desires to be reconciled again with his wife, he is, according to the unanimous opinion of Muslim scholars, obliged to make a 'guilt-offering' (*kaffārah*, lit. 'that which covers the sin') because he has broken his vow. The legal regulations concerning the *īlā'* are applicable only if the husband has vowed to abstain from conjugal relations with his wife for longer than four months.

Another vow of abstinence was the *ẓihār* (from *ẓahr*, 'back'). In this case the husband declared that 'his wife should be to him even (untouched) as the back of his mother.' This was apparently a customary vow of abstinence by the heathen Arabs, which, according to tradition, was also taken by some Muslims in the month of fasting, when they proposed to abstain from conjugal relations with their wives. This vow was expressly condemned in Qur'ān, lviii. 1–5.

Apparently the original meaning of this revelation was that every Muslim who 'turned again' to this heathen custom should have to pay a heavy penalty (*kaffārah*), consisting of the emancipation of a Muslim slave, fasting for two successive months, or the feeding of sixty poor persons, before he was again permitted to have intercourse with his wife. The Muslim *faqīhs*, however, have explained these verses of the Qur'ān in another sense.[1] According to the Shāfi'ites, the husband is legally bound to this *kaffārah* unless he repudiates his wife immediately after pronouncing the *ẓihār*. 'If he does not do this at once,' they say, 'then he "turns back,"' *i.e.* breaks his vow of abstinence, and must thus give the *kaffārah*. According to the other *fiqh*-schools, he breaks his promise only if he actually behaves contrary to his vow, and is only then obliged to give the *kaffārah*. Thus these also explain 'turn back' in the sense of changing opinion and breaking the vow of abstinence.

Both the *īlā'* and the *ẓihār* soon became obsolete in Islām.

If the husband fulfils his duties, he has the right to demand obedience from his wife, and is even entitled to chastise her if she is unwilling (*nāshiz*); in this case she loses her right to *nafaqah*.

Husband and wife, according to the Shāfi'ites, can make no change in their mutual rights and duties as established in canon law. Any agreement of that nature which they may make in the marriage contract has no binding power. Nevertheless, it is usual, in some Muslim lands, even among the Shāfi'ites, for the husband to undertake certain exceptional obligations with regard to his wife, to which he is not bound by the law. He promises, *e.g.*, not to take a second wife, though he has the right to do so. In order to give a binding force to such promises the bridegroom, immediately after the conclusion of the marriage contract, pronounces a repudiation of his wife conditional on the non-fulfilment of his vows. He declares, after making the marriage contract: 'If I take a second wife [or 'if I neglect my wife and give her no *nafaqah*,' etc.], then is she repudiated by me.' This custom is called *ta'līq* (lit. 'to hang up' the divorce to a condition).

By this *ta'līq* various rights may be guaranteed to the wife which the law does not give her, and she may gain in this way a much better position. If she is ill-treated or neglected by her husband, or if he acts in other respects contrary to his promises, the marriage is *ipso facto* dissolved, and the wife may, if she wishes, marry another husband. This *ta'līq* is customary especially in the Dutch Indies. Only when the bridegroom is of high distinction or a pious man, so that it is im-

[1] Cf. J. Wellhausen, 'Die Ehe bei den Arabern,' in *GGN*, 1893, pp. 454–456.

[1] Cf. I. Goldziher, *Die Ẓāhiriten*, pp. 52–54.

possible to imagine that he will treat his wife otherwise than well, is the *ta'līq* not applied.[1]

6. Divorce.—(*a*) *Repudiation* (*ṭalāq*).—According to Muslim canon law, marriage may be dissolved by divorce in four ways, besides by the death of one of the parties or their apostasy from Islām. The common form of divorce is the repudiation (*ṭalāq*) pronounced by the husband. Among the old Arabians the husband thus renounced his rights over his wife, who could return to her relatives and contract a new marriage with another husband. Her marriage was immediately dissolved by the *ṭalāq*, the effect of which was the same as that of the *'atāq*, or emancipation of slaves. But, according to the new law of Islām, the wife might not marry again during a certain period (*'iddah*; cf. § 5 (*c*) (5)) after the repudiation. During the *'iddah* it had to be seen whether she was pregnant, in which case her former husband would have the right of claiming the child. Further, the husband gained the right of reconciling himself with his wife during the *'iddah*, and of revoking the *ṭalāq*. The revocation of the repudiation is called *rujū'* (also *rij'ah* or *raj'ah*).

According to Muslim tradition, this new right of the revocation of the *ṭalāq* was at first abused. It was evidently given to the husband in order to put him in a position to retrieve his fault if he had repudiated his wife in a fit of passion; but a wife complained to the Prophet of her husband, who repeatedly repudiated her and as often revoked his repudiation before the expiration of the *'iddah*. By this means the woman was practically repudiated, but could not contract a new marriage with another husband. Obviously her husband was trying in this way to compel her to ransom herself by paying back the dowry that she had formerly received from him. The Prophet forbade this practice in Qur'ān, ii. 231:

'When you have repudiated your wife and she has waited her time, keep her with you and treat her well, otherwise let her go free, but do not take her back with evil intent. He who does that sins. Yet do not mock the words of Allāh.'

Moreover, the right of revoking the *ṭalāq* was now limited in Qur'an, ii. 229 f.:

'If the *ṭalāq* has twice (taken place, then it may only) be revoked with good intentions, or you must let go (your wife) with kindness, (for) it is not permissible to take back from her that which you have (formerly) given her . . . but if the husband repudiates his wife (once more), then she is no longer lawful for him.'

On the ground of these verses of the Qur'ān, a husband may repudiate his wife only three times. After each *ṭalāq* an *'iddah*-period begins, during which the wife may not marry again. During the *'iddah* after the first and second repudiations the marriage is not yet dissolved. If, *e.g.*, the husband is married to four wives and repudiates one of them, he may not during the period of *'iddah* marry another woman; but, if either the husband or wife dies during this period, the survivor shares in the inheritance. Moreover, the husband is entitled to revoke his repudiation during this period. If he allows the term to expire, the marriage is then dissolved. The divorced parties may contract a new marriage with each other if they both wish it; but in this case a new marriage contract must be made and a dowry again paid by the husband.

After the third *ṭalāq*, however, the marriage is immediately dissolved. An *'iddah*-period also follows the third repudiation, during which the wife may not marry again; but the man has no further right to revoke his repudiation, and the divorced pair cannot ever contract a new marriage with each other.

To the last rule there is one exception based on the Qur'ān itself. A woman at Medīna who was three times repudiated by her husband and afterwards married to another man wished afterwards to marry her first husband again. When she explained her wish to the Prophet, he declared that this was impossible, even if she were repudiated by her second husband; later on, however, he took pity on her, and altered the regulation quoted above from Qur'ān, ii. 229 f. After the words 'after the third *ṭalāq* the woman is no longer permitted to him,' the following regulation was added: 'Unless the woman afterwards married another husband and was also repudiated by him; in such a case it is no sin for them both (*sc.* the wife and her first husband) to return to each other, if they think that they will in future be able to observe the commandments of Allāh.'

On the ground of this regulation, the law allows married people to contract a new marriage with each other even after the third *ṭalāq*, if the wife has in the meantime married another husband and been repudiated by him. In Muslim countries repudiation is very often pronounced three times for insignificant reasons, and the divorced persons often desire to be joined together again. In order to make this possible, the wife contrives to contract a mock-marriage with another husband, who is ready to repudiate her immediately after the marriage. He who declares himself willing to do this is called *muḥallil* (because he makes the wife by this mock-marriage once more *ḥalāl*, *i.e.* permissible for her first husband). Such a mock-marriage may be employed only twice, for, if the husband has three times pronounced the thrice-repeated *ṭalāq*, he cannot again contract a new marriage with his repudiated wife.

(*b*) *Other forms of divorce.*—Besides *ṭalāq* there are three other ways in which marriage may be dissolved: *khul'*, *faskh*, and *li'ān*. After each of these, a period of *'iddah* begins for the woman in which she may not marry again. During this time she is entitled to *nafaqah*, if she has not neglected her duties towards her husband.

(1) *Khul'* was customary in ancient times among the Arabs. Generally speaking, it consisted in the ransom of the wife by her relatives, usually for a sum of money proportionate to that which they had received from the bridegroom as *mahr* at the time of the marriage. In consideration of this sum, the husband was induced to renounce his wife and leave her free to marry another husband. *Khul'* means literally 'to put off.' The use of *khul'* in this context is derived from the symbolic act (the throwing away of a cloak, a shoe, or a similar piece of clothing) by which the husband shows that he renounced his claim on his wife.[1]

As has already been mentioned, the Prophet originally forbade the husband to receive back his wife's dowry at the dissolution of marriage, as this custom often gave rise to the deliberate neglect and otherwise vexatious treatment of the wife (see the words of Qur'ān, ii. 229, quoted above; cf. also iv. 24–25). But later on the ancient custom of *khul'* was again permitted.

The reason of this was the request of a woman at Medīna, who declared that she had such an aversion to her husband that she no longer wished to stay with him. She asked permission to buy her freedom in order to be released from her husband, and the following addition was then made to the words of Qur'ān, ii. 229: 'It is not lawful for you to take back anything which you have given to your wives, except if you are afraid that you will transgress the laws of Allāh; when you are afraid of this, then is (the ransom) with which the wife redeems herself no sin for either (of the married couple), that is the law of Allāh,' etc.

On the authority of these words the *khul'* remained even in Islām a legal method of divorce. The wife by this means buys her repudiation; her husband can never revoke it. If the husband and wife both wish it, they may again join in marriage.

(2) *Faskh* is the annulment of marriage with the co-operation of the magistrates. According to the Ḥanifites, a minor who has been given in marriage, not by her father or grandfather, but by a more distant relative, may demand dissolution of this

[1] Cf. C. Snouck Hurgronje, *The Achehnese*, i. 348 ff.

[1] Cf. Ru 47ff., and J. L. Burckhardt, *Notes on the Bedouins and Wahabys*, i. 113.

marriage on the attainment of her majority (see § 5 (*a*)). Other reasons for the *faskh* may be found in certain diseases or bodily infirmities mentioned in the *fiqh*-books. This method of divorce is possible also when, after the completion of the marriage, it appears that the bride or bridegroom does not fulfil certain qualifications (*e.g.*, with regard to birth, position, virginity, etc.) which had been expressly insisted on as conditions at the making of the marriage contract. According to the Shāfi'ites, a wife may also demand *faskh* if she proves that her husband is not able to give her lawful maintenance (*nafaqah*). In these cases the sentence of dissolution of marriage is pronounced by the magistrate at the request of the parties.

(3) The dissolution of marriage by means of *li'ān* ('imprecation') is based on Qur'ān, xxiv. 6–9. As a rule, any one who accuses a free Muslim woman of fornication, without being able to prove his accusation, is punished by scourging. If, however, a husband suspects his own wife of infidelity, the law allows him to accuse her of adultery without any further proof, and to contest the legitimacy of her child, but he must do so by means of the *li'ān*, invoking Allāh in the manner prescribed in Qur'ān, xxiv. 6–9:

'Those who accuse their wives of infidelity and have no other witnesses than themselves must invoke Allāh four times as a witness that they have spoken the truth, and a fifth time, calling down His curse on themselves if they have lied. The wife may avert the punishment (for adultery) if she swears by Allāh four times that her husband has lied, and a fifth time, declaring that God's wrath may fall upon her if her husband has spoken the truth.'

If a husband, after accusing his wife of adultery, refuses to pronounce the *li'ān*, he must be scourged for slander if he cannot produce witnesses; but the Ḥanifites consider that the husband ought to be imprisoned until he pronounces the *li'ān* or admits that he has lied. According to the Shāfi'ites and the Mālikites, not only is the marriage legally dissolved by the *li'ān*, but the married couple may never marry each other again. According to the Ḥanifites, even after the *li'ān* the marriage must still be dissolved by a decision of the magistrate, and the reunion of the parties is permitted if the husband has afterwards revoked his accusation and been scourged for his slanderous imputation.

7. Relationship, and the rights and duties based on it.—(*a*) *The relation between a child and his parents.*—In ancient Arabia, on account of the nature of the marriage by sale, the husband (*ba'al*, lit. 'master,' of the woman) was regarded as the father of all children borne by his wife during the marriage, even if he did not beget them. Thus he was also regarded as the father of the children borne by his wife if he had married a pregnant woman, or if he had given up his wife for a certain time to another man in order to raise up noble children from her.[1]

In Islām this rule was altered. According to Muslim canon law, only the man who has begotten the children in a legal marriage is regarded as their father; a woman must wait for the expiration of the *'iddah*-period, if she wishes to marry another husband after the dissolution of her marriage, in order that it may be seen whether she is pregnant. If she is, she may marry again only after her confinement, and the first husband is regarded as the father of the children born during the *'iddah*. Thus in Islām the first and second husbands cannot quarrel about the children born after the dissolution of the marriage; such quarrels were very common in the pre-Islāmic period.[2]

Muslim canon law generally recognizes a child born in wedlock as begotten by the husband and thus as legitimate when the birth takes place not earlier than six months after the consummation of marriage. A child born within a certain period after the dissolution of marriage (whether by divorce or through the death of the husband) is also regarded as legitimate. According to the Ḥanifites, it must be assumed that pregnancy may last two years if it appears that the mother had no menstruation during that time. According to the Shāfi'ites and the Mālikites, pregnancy may even last much longer (four or seven years), and thus a child born so long after the dissolution of the marriage may still pass as legitimate. Further, the children which the master begets from his slaves are regarded as legitimate offspring, and are placed on a complete equality with those begotten in lawful marriage (see § 9 (*a*)). When it appears that a marriage is invalid, or that any one has been wrong in thinking that he was the owner of a slave, the children are, nevertheless, regarded as legitimate, provided the parents acted mistakenly in good faith, so that there can be no question of *zinā'* ('fornication').

All other children are illegitimate (*walad zinā'*, 'begotten in fornication'). There is no relationship between such illegitimate children and their father, even though the father expressly recognizes that they were begotten by him. From such an acknowledgment no claim to relationship can follow either for the child or for the father (neither right of inheritance, nor guardianship, nor duty of maintenance). The Shāfi'ites even allow a father to marry the daughter whom he begets in fornication, though they regard it as blameworthy (*makrūh*). The Ḥanifites forbid this. On the other hand, the relationship between the mother and her illegitimate children is legally precisely the same as that between her and her legitimate children. She is not allowed to marry her illegitimate son, and she inherits from him, etc. A child is also illegitimate if the husband by means of *li'ān* accuses his wife of adultery (see § 6 (*b*) (3)), and declares that the child borne by her is not his. If, on the other hand, it is uncertain whether a child was really begotten by the husband during wedlock (or by the master, during the time that he was the owner of the slave), it is then regarded as legitimate without further proof, if the father recognizes it as his. Such an acknowledgment is called *iqrār*.

Adoption is forbidden, and has no legal force (see ADOPTION [Muhammadan]).

Blood-relations in the direct line are obliged to support each other (by means of *nafaqah*) in case of necessity; according to the Ḥanifites, this duty rests on all blood-relations that are not allowed to marry each other (thus on all *maḥrams*; see § 5 (*c*) (2)).

(*b*) *Other kinds of relationship.*—Another result of marriage by sale among the ancient Arabians was that after marriage the wife ceased to belong to her family, so that there was family-relationship only between the child and the family of its father, and not between it and the family of the mother. It is true that for philological reasons it may be assumed that even in Arabia the patriarchal family-system was preceded by the matriarchal, but in historical times no clear traces of the latter system can be found.[1]

[1] For further particulars about this so-called *nikāḥ al-istibḍā'* cf. W. R. Smith, *Kinship and Marriage in Early Arabia*, London, 1885, p. 110 [[2] do. 1903, p. 132].

[2] *Ib.*

[1] On this subject see the works of the following writers, whose views differ as to many details: I. Goldziher, 'Endogamy and Polygamy among the Arabs,' in *The Academy*, xviii. [1880] 26; G. A. Wilken, *Das Matriarchat (das Mutterrecht) bei den alten Arabern*, Leipzig, 1884; J. W. Redhouse, 'Notes on Prof. E. B. Tylor's Arabian Matriarchate,' in *JRAS* xvii. [1885] 275-292; W. R. Smith, *Kinship and Marriage in Early Arabia* (new ed. with additional notes by the author and by I. Goldziher, London, 1903); cf. Th. Nöldeke, in *ZDMG* xl. [1886] 148 ff.; J. Wellhausen, 'Die Ehe bei den Arabern,' in *GGN*, 1893, p. 460 ff.; and Th. W. Juynboll, *Over het verband tusschen de Moham. bruidsgave en het rechtskarakter van het oud-Arabische huwelijk*, Leyden, 1894.

As already pointed out, even before Muhammad marriage ceased to be generally regarded as a purchase. So also it was customary in Arabia before Islām not to limit relationship entirely to the family or tribe of the father, but in many cases to take into consideration the relatives on the mother's side, although the maternal relatives are never placed on an equality with the paternal by the Muslim scholars. It is also true that maternal relationship is an obstacle to marriage according to Qur'ān, iv. 26 f. (the maternal aunt is a *maḥram*, just as is the paternal aunt, and the *ḥaḍānah* [*i.e.* the care of children] is in certain cases equally a right of maternal relatives), but, in general, attention is paid only to the rights and duties of the *'aṣabāt*, *i.e.* the male relatives on the paternal side.

Rights which are based on relationship (*nasab*) and which are usually conceded to the *'aṣabāt* are: (1) the right of giving female relatives in marriage or of opposing the marriage of female relatives who wish to marry below their rank; (2) the right of inheritance; (3) the right of managing the property of blood-relations who are under age or insane; (4) the right of retaliation or of demanding the price of blood if a blood-relation has been killed; and (5) the right to succeed a blood-relation who has set free a slave in his rights and duties with regard to the freedman. According to the majority of Muslim *faqīhs*, if a blood-relation has unintentionally killed any one, the duty of paying the satisfaction money also falls entirely on the *'aṣabāt*.

In order to indicate the nearest relative among any one's *'aṣabāt*, Muslim scholars divide the male relatives on the paternal side into classes. The first class consists of the descendants, the second of the ancestors; the third class is formed by the descendants of the father, and the fourth class by the descendants of the paternal grandfather. Among the descendants the son is the next of kin, then the son's son, etc.; among the ancestors the father is the next of kin, next to him his father, etc.; the next of kin in the third class is the brother, then follows his son, etc.; the next of kin in the fourth class is the paternal uncle, then follows his son, afterwards his son's son, etc. He who is related to any one both on the paternal and on the maternal side precedes a blood-relation of the same rank who is related to him only on the paternal side; so, *e.g.*, in the third class the full brother takes precedence of the half-brother on the paternal side, the son of the full brother precedes the son of the paternal half-brother, etc.

Thus, as a rule, not only the son but also the grandson, etc., has precedence over the father, and the grandfather on the paternal side ranks above the brother. There are, however, exceptions to this rule. (1) The nearest *'aṣabāt* of a woman who have the right to give her in marriage are, according to the Shāfi'ites, not her descendants but her ancestors, and after them her relatives in the lateral line; but, according to the Ḥanifites and Mālikites, the ordinary rules obtain in this case also, and the descendants have the right in the first place to be *walī al-nikāḥ*. (2) The brothers of a deceased man inherit equally with his paternal grandfather, and are thus not excluded by him; but the grandfather has always the right to at least a third of their common share, so that, if he inherits together with one or two brothers, each obtains an equal part; but, if he inherits with three or more brothers, the latter divide two-thirds of the whole among themselves in equal parts, while the grandfather has one-third. (3) The rights which can be exercised over a freed slave pass by the death of his emancipator to the nearest of the *'aṣabāt* of the emancipator, but in this case the brothers take precedence of the grandfather. (4) According to the Shāfi'ites, the obligation of the nearest *'aṣabāt* to pay the *'aql* (the atonement money), when one of their blood-relations has committed unintentional manslaughter, falls only on the lateral relations and not on the *'aṣabāt* in the direct (ascending and descending) line (cf. art. CRIMES AND PUNISHMENTS [Muhammadan], vol. iv. p. 292).

The blood-relations on the maternal side and those on the father's side, so far as they do not belong to the *'aṣabāt*, are called *dhawu'l-arḥām*. They have in general no rights and duties based on relationship. According to the Ḥanifites, however, they take the place of the *'aṣabāt*, if these do not exist. In such a case the right to be *walī* and to give the bride in marriage passes to the mother and to her next of kin; and the inheritance also passes to the next relatives among the *dhawu'l-arḥām*. According to the Shāfi'ites and Mālikites, on the other hand, the *'aṣabāt* in such a case are not succeeded by the *dhawu'l-arḥām* but by the Muslim community; thus, if there are no *'aṣabāt*, the treasury (*bait al-māl*) inherits; and the *ḥākim*, *i.e.* the magistrate, must take the place of the *walī* of the bride.

(*c*) *Guardianship.*—Minors are legally under the guardianship of their parents or nearest blood-relations. They are not qualified to make independent contracts, or to undertake other legal transactions. Minority ceases generally, according to Muslim law, when the children are really adult and the signs of puberty can be observed. According to the Shāfi'ites, minority ends in any case after the completion of the fifteenth year; according to the Ḥanifites, only after the eighteenth year. Besides the so-called *wilāyat al-nikāḥ* (*i.e.* the guardianship which gives the guardian the right to give a female relative in marriage, or to prevent her marrying below her rank), which has already been discussed in § 5 (*a*), Muslim lawyers distinguish two other kinds of guardianship, namely, the *ḥaḍānah* and the *wilāyat al-māl*.

(1) The purpose of the *ḥaḍānah* is to care for the physical well-being of the minors and also for their education and training for a profession. During the married life of the parents the children are subjected to the parental authority; in case of separation of the parents, the mother has the right to retain the children so long as they have need of her help, *i.e.*, according to the Shāfi'ites, until they are about seven years old; after this, the child may entrust itself to the care of the father, if it prefers to do so; according to the Ḥanifites, a boy always comes at that age under the guardianship of the father, but a girl remains under the guardianship of her mother, while, according to the Mālikites, both boys and girls remain under the guardianship of the mother until they are of full age (girls even until they marry).

If the mother contracts a fresh marriage, she loses the *ḥaḍānah*, unless her new husband is at the same time one of the blood-relations of the children. In this case she keeps the guardianship, according to the Shāfi'ites, if the husband belongs to the *'aṣabāt* of the children; according to the Ḥanifites, if he is a *maḥram* of them; and, according to the Mālikites, if he is either a *maḥram* of them or a relative who would himself have the right to be guardian over the children if he were not excluded by nearer relatives.

If, after the divorce, one of the parents removes to another place, the child remains as a rule with the parent who does not leave the former dwelling-place, in order to avoid the dangers of travel. If, however, the father establishes himself permanently in another place, he has the right to take his children there with him; but the rules of the

different *fiqh*-schools with regard to this subject vary in details.

If the mother is dead, Muslim lawyers generally consider the female relatives the most suitable for the *ḥaḍānah*. According to the Ḥanifites, the father and the other *'aṣabāt* of minors have a right to the *ḥaḍānah* only when there are no female relatives.

The rules which the *fiqh*-schools follow with regard to the order in which the male and female relatives enjoy a right to the *ḥaḍānah* differ from each other in many details; *e.g.*, according to the Mālikites, the maternal aunt has a preference above all other female relations. They base this opinion on the tradition that, when Ḥamzah and his wife were dead, three of his *'aṣabāt* quarrelled over the question which of them had the best right to look after Ḥamzah's young daughter. One of them said to the Prophet: 'She is not only the daughter of my uncle, but my wife is, moreover, her maternal aunt.' On this Muhammad decided that the child must be entrusted to this man and his wife, saying, 'The maternal aunt is as good as the mother.'

According to the Shāfi'ites, if the mother dies or is not qualified for the *ḥaḍānah*, she is succeeded by her mother, or, if necessary, by the mother of her mother. Only after them the father, and, after him, his mother, or, if necessary, his maternal grandmother, has a claim to the *ḥaḍānah*. If the father and his female ancestors (and, after them, the grandfather and his female ancestors) are dead or disqualified, the nearest of the male or female relatives in the collateral line has the right to the *ḥaḍānah*. In this case by the female relatives are meant all, both on the maternal and on the paternal side, but by the male relatives only the *'aṣabāt*. If several male and female relatives are equally related to the child, the female ones have the preference. If the child has reached the age of about seven years, it may choose for itself whether it will be entrusted to the next of kin of its male or of its female relatives.

(2) The *wilāyat al-māl* is the guardianship which has for its purpose the management of the property of minors. According to the Shāfi'ites, only the father (and, failing him, the paternal grandfather) can be legally *walī al-māl*. The father (or, if necessary, the grandfather) has, however, the right to appoint by testamentary disposition a guardian over his children (or grandchildren) who are under age. A guardian thus apppointed is called *waṣī*. Even women can in this way be entrusted with the care of the property of a child under age, and the mother is in the first place taken into consideration for this purpose, although she has no legal claim to the position. Failing both the father and grandfather, or a guardian appointed by them, the magistrate (*ḥākim*), or a person appointed by the magistrate, must take the place of guardian. The Mālikites recognize the qualification of the father only (not that of the paternal grandfather) to set up a legal claim to be guardian and to appoint a *waṣī*.

The guardian manages the property of the minor, and makes any necessary agreements for him, etc. When it is near the child's coming of age, the guardian has to inquire whether his ward is *rashīd*, *i.e.* able to manage his property for himself. This regulation is based on Qur'ān, iv. 5:

'Examine the minors, and put them in possession of their property, when you find that they are *rashīd*.'

If it appears that the ward, though of age, is not yet capable of managing his own property, the guardianship continues. The opinion of Abū Ḥanīfah, that the guardianship in any case ceased as soon as the ward was twenty-five years old,[1] has found no favour with other Muslim scholars.

The *ḥaḍānah* of the insane, and the care of their property, must be entrusted as a rule to the same blood-relations as guardianship over minors. The wife of an insane person has, however, the first claim to the *ḥaḍānah*, and his daughter has in this respect the preference above all other female relatives with the exception of the mother.

8. Law of inheritance.—(*a*) *Introduction.*—Muslim canon law distinguishes various groups of heirs. The first group consists of persons to whom the Qur'ān allots a definite share ($\frac{1}{2}$, $\frac{1}{4}$, $\frac{1}{8}$, $\frac{2}{3}$, $\frac{1}{3}$, or $\frac{1}{6}$) in the estate. Such a share is called *farīḍah*, and the heirs belonging to this group are therefore called the *dhawu'l-farā'iḍ*, *i.e.* those who have a right to such definite shares.

When the heirs of this first group have received their share, the residue of the estate falls to the share of the male relatives of the deceased in the male line (the so-called *'aṣabāt*). These *'aṣabāt*, who in Islām thus form a second group of heirs, were in Arabia in pre-Islāmic times the only relatives who had a right to the estate. When, however, in the battles at Badr and Uḥud and on other occasions, many Muslims had perished, quarrels arose among the members of their families as to the division of the estates which they left. Some examples of this are reported in Muslim tradition. The widow of 'Aws ibn Thābit seems to have complained to the Prophet that the male relatives of her dead husband had taken possession of his estate, while she and her children had obtained nothing of it. Other women came with similar complaints to Muhammad. This gave him occasion to decide that for the future the widow and some of the nearest female relatives of the deceased should have a right to a certain share in his estate. These regulations are to be found in Qur'ān, iv. 8, 12–15, and 175. It is not quite clear on what principles Muhammad based his regulations. It is, however, certain that he did not mean to abolish the right of inheritance of the *'aṣabāt*. This continued to form the foundation also of the Muslim law of inheritance; and the new regulations, according to which some of the nearest relatives of the deceased obtained a right to a fixed share (*farīḍah*) of his estate, were, therefore, only supplementary to the old Arabian law of inheritance.

If there are no *'aṣabāt*, and there still remains something over from the estate after the *dhawu'l-farā'iḍ* have received their shares, then, according to the Ḥanifites, the residue must also be shared among the *dhawu'l-farā'iḍ* proportionately to their shares. According to the Shāfi'ites and Mālikites, this residue falls to the lot of the treasury (*bait al-māl*), and it is handed over to the *dhawu'l-farā'iḍ* only if the treasury is not managed according to the rules of the law.

The blood-relations of the deceased who do not belong to the *'aṣabāt* and to whom no *farīḍah* is assigned in the Qur'ān—the so-called *dhawu'l-arḥām*—form, as has already been noted in § 7 (*b*), according to the Ḥanifites, a third group of heirs who have a claim to the estate in the case of the failure of the *'aṣabāt* and the *dhawu'l-farā'iḍ*. According to the Shāfi'ites and the Mālikites, the *dhawu'l-arḥām* are not heirs unless the *'aṣabāt* and *dhawu'l-farā'iḍ* fail and the treasury is not managed according to the rules of the law. In the opposite case the whole estate falls, according to them, on the failure of heirs of the first and second group, to the share of the treasury.[1]

(*b*) *The law of inheritance of the 'aṣabāt.*—As has been stated above (in § 7 (*b*)), the *'aṣabāt* are divided into classes, and the descendants of the deceased take precedence over his ancestors, the latter over the descendants of his father, these again over the descendants of his grandfather, and in each class only the next of kin inherits. But, as has already been noted, the grandfather does not exclude the brothers of the deceased; he inherits together with them, and has a right to at least $\frac{1}{3}$ of their common share. If there are at the same time *dhawu'l-farā'iḍ* among the heirs, the grandfather has, moreover, a claim to at least $\frac{1}{3}$ of the estate. He may then choose which is most advantageous for him: $\frac{1}{3}$ of the estate, $\frac{1}{3}$ of the residue of the estate after the *dhawu'l-farā'iḍ*

[1] See, among others, A. von Kremer, *Culturgeschichte des Orients unter den Chalifen*, Vienna, 1875–76, i. 517, 532.

[1] Cf. E. Quatremère, *Histoire des sultans mamlouks de l'Egypte*, Paris, 1837–41, II. i. 132.

have received their share, or a share equal to that inherited by a brother of the deceased.

If the deceased is a freed slave and dies without leaving *'aṣabāt*, the person (man or woman) who has given him his freedom (the so-called *mawlā*) takes the place of the *'aṣabāt*, and this person is succeeded by the nearest of his *'aṣabāt* if he has predeceased the freed man.

In consequence of the regulation in Qur'ān, iv. 12–15 and 175, that women have a right to the half of what men in the same grade of blood-relationship inherit, some female blood-relations on the father's side are regarded in the Muslim law of inheritance as *'aṣabāt* in addition to the male relations. If, *e.g.*, the deceased has left both sons and daughters, they inherit together, and the daughters also count as *'aṣabāt*; but a daughter receives only half the share of a son. In such a case the daughter is called *'aṣabāt bi'l-ghairi*, i.e. *'aṣabāt* through another—she is *'aṣabāt* because the son (her brother) inherits. In this case the son himself is described as *'aṣabāt bi-nafsihi* (i.e. *'aṣabāt* by himself). The same rule and nomenclature also obtain for the daughter of a son of the deceased who inherits together with the son of a son of the deceased; also for the full sister of the deceased who inherits together with his full brother; and for the half-sister on the paternal side who inherits together with a half-brother on the paternal side. The grandfather on the paternal side also makes *'aṣabāt bi'l-ghairi* of both the full sister and the half-sister on the paternal side.

The full sister and the half-sister on the paternal side are called *'aṣabāt* when they inherit together with a daughter of the deceased or of his son; *i.e.*, they have in that case, like the male *'aṣabāt*, a claim to the residue of the inheritance after the *dhawu'l-farā'iḍ* have received their share. In such a case, therefore, they are called *'aṣabāt ma'a'l-ghairi*, i.e. *'aṣabāt* because they inherited 'together with' another.

(*c*) *The law of inheritance of the dhawu'l-farā'iḍ.*—The regulations concerning the shares to which the heirs belonging to this group have a claim are based upon a literal explanation of the so-called 'inheritance verses' in Qur'ān, iv. 12–15:

'Allāh commands you to give to your children: to a male child as much as to two female; if there are only female children (two or) more than two, then these receive two-thirds of the estate, and, if there is only one female child, then she receives the half. The parents (of the deceased) each receive one-sixth, if he leaves a child; if, however, there are no children and the parents inherit, the mother receives a third, except when there are surviving brothers of the deceased, for then the mother receives only a sixth. You (men) receive the half of the estate of your wives if they leave no children, otherwise you receive only a fourth. They (the widows) receive a fourth of your estate if you leave no children, otherwise (they receive only) an eighth. If a person dies without leaving blood-relations in the direct line, and there is a brother or sister of him, then these each receive a sixth; if there are more, then they receive together one-third.'

A supplement to these 'inheritance verses' is given in Qur'ān, iv. 175:

'They ask you for a decision,—say: "Allāh decides for you concerning the case in which a man dies without leaving blood-relations in the direct line as follows: If a man die without leaving children and there is a sister of him, then she receives the half of his estate . . . if there are two sisters, then they receive two-thirds between them; if, however, they inherit together with their brothers, one brother receives as much as two sisters."'

Thus in these verses fixed shares are assigned to the daughter, the two parents, the husband (and wife), and the brothers and sisters of the deceased. But, according to the Muslim lawyers, Qur'ān, iv. 15, refers only to half-brothers and half-sisters on the maternal side; iv. 175, on the other hand, to full sisters or half-sisters on the paternal side. Moreover, according to their explanation of the text, the rules for the daughter of the deceased equally apply to the daughter of his son; and the rules for his parents also apply to his grandparents. The heirs who have a claim to a fixed share of the inheritance can thus be reduced to the following twelve classes: (*α*) *in the descending line*: the daughter of the deceased, and the daughter of his son; (*β*) *in the rising line*: the father, the mother, the grandfather, and the grandmother; (*γ*) *in the side line*: the full sister, the half-sister on the father's side, and the half-sister and half-brother on the mother's side; (*δ*) the widow and the widower.

The shares to which these twelve classes of heirs have a claim are the following:

(1) The daughter receives ½, two or more daughters together ⅔ of the estate; if sons also inherit, the daughter does not receive a fixed share, but then becomes *'aṣabāt bi'l-ghairi*, and receives ½ of the share of a son.

(2) The same rules obtain for the daughter of a son. She receives ½, two or more daughters of a son together ⅔ of the estate; if the daughter of a son inherits together with the son of a son, she receives ½ of his share. She is excluded by the son of the deceased if he inherits, but not by the daughter of the deceased. If, *e.g.*, there is one daughter of the deceased, she receives ½, and the son's daughters receive ⅙, since ⅔ of the estate is allotted to the daughters and son's daughters together. But, if there are two or more daughters, there then remains no further residue of the *fariḍah* for the son's daughters; they may, however, still inherit if there is a son's son, for he makes them *'aṣabāt bi'l-ghairi*, and in this case he is, therefore, called the 'blessed' son's son.

(3) The father has a claim to ⅙ of the estate; besides this, he inherits as an *'aṣabāt* if there are no offspring of the deceased.

(4) The paternal grandfather has also a claim to ⅙ of the estate, if the father of the deceased is no longer alive; besides this, he inherits as an *'aṣabāt* if the deceased has left neither father nor offspring. If there are surviving brothers of the deceased, the grandfather inherits together with them (see § 8 (*b*)).

(5) The mother inherits ⅓ of the estate; if, however, there survive either, in the first place, children or son's children or, in the second, two or more brothers or sisters of the deceased, she inherits only ⅙.

(6) The grandmother inherits ⅙ of the estate. According to the Mālikites, the maternal grandmother has this right as well as the paternal grandmother of the deceased, together with her female ancestors in the female line. According to the Shāfi'ites and Ḥanifites, the same applies also to the mother of the paternal grandfather of the deceased; *i.e.*, by grandmother they understand every female ancestor of the deceased with the exception of those who are related to him by means of a grandfather who does not belong to his *'aṣabāt*.

(7) A full sister receives ½; two or more full sisters inherit ⅔ of the estate; they have, however, this right only when the deceased has not survived descendants or ancestors. If, however, a daughter of the deceased or of his son survives, the full sister becomes *'aṣabāt ma'a'l-ghairi* (see § 8 (*b*)); and, if the grandfather on the paternal side shares the inheritance, then she becomes *'aṣabāt bi'l-ghairi*; similarly, if a full brother of the deceased shares the inheritance.

(8) Practically the same rules obtain for a half-sister on the father's side. If there is one half-sister, she receives ½; if there are two or more, they receive ⅔ of the estate; if there is a half-brother on the father's side, the half-sister on the father's side becomes *'aṣabah bi'l-ghairi* and receives ½ of her brother's share. Like the full sister, she loses her claim to a *fariḍah* if there are offspring or male ancestors of the deceased, or if his full brother survives. Inheriting together with the grandfather, she becomes *'aṣabāt bi'l-ghairi*; if, on the other hand, she inherits with the daughter or son's daughter, she becomes *'aṣabāt ma'a'l-ghairi*. If there are two or more full sisters of the deceased, they receive together ⅔ of the estate, and there remains no residue of the *fariḍah* for the half-sister on the father's side; if, however, the latter inherits together with one full sister of the deceased, the two have together a claim on ⅔ of the estate; the full sister then receives ½, and the half-sister ⅙. This is the same rule as in the case of the inheritance of daughters together with son's daughters; the ⅙ is in both cases called by Muslim lawyers *takmilah*, *i.e.* the 'filling up' (*sc.* of the ⅔ which the daughter or a full sister receives).

(9) The half-brother on the mother's side follows the rules of the next case.

(10) The half-sister on the mother's side has a claim to ⅙ of the estate. Two or more half-brothers or half-sisters receive together ⅓. They have, however, a claim to a *fariḍah* only if the deceased died without surviving offspring or male ancestors.

(11) The widower receives ½ of the estate of his wife. If, however, she has left children or son's children, he receives only ¼, whether the children are his own offspring or those of another husband.

(12) The widow receives ¼ of the estate of her husband; if, however, he has left children or son's children, she receives only ⅛, both when they are her offspring and when they are those of another wife of the deceased. If there are several widows, they must divide their *fariḍah* equally.

It may happen that, when the various *dhawu'l-*

farā'iḍ inherit together, the sum of the fixed shares to which they have a claim is more than the whole estate. In such a case the share of each must be proportionately diminished.

For example, if there are no sons, two daughters have a claim to $\frac{2}{3}$ of the estate, the father and mother to $\frac{1}{6}$ each. If the deceased has also left a widow, she has in this case a claim to $\frac{1}{8}$ and the sum of the *farā'iḍ* is $\frac{2}{3}+\frac{1}{6}+\frac{1}{6}+\frac{1}{8}=\frac{16}{24}+\frac{4}{24}+\frac{4}{24}+\frac{3}{24}=\frac{27}{24}$. In this case the estate must be divided into twenty-seven equal shares instead of twenty-four; of these the daughters receive sixteen, the parents four each, and the widow three. This diminution of the amount of the shares of the inheritance is called *'awl*. The case here indicated is known as the *minbariyah*, because this problem was proposed for decision to the Khalīf 'Alī while he stood in the pulpit (*minbar*).

(*d*) *Special cases.*—There are still some special cases—the so-called *masā'il mulaqqabah* (*i.e.* cases which are known under special names)—in which, owing to the simultaneous inheritance of various blood-relations, a departure from the general rules is regarded as necessary in order to prevent relatives who usually receive more than others from receiving in a special instance less than them. It is impossible here to enumerate all these cases; the following are examples of them.

If a woman is deceased and her estate has to be shared between her two parents and her husband, the latter has a claim to $\frac{1}{2}$ and the mother to $\frac{1}{3}$ of the estate, so that there would remain over for the father only $\frac{1}{6}$—exactly $\frac{1}{2}$ of the mother's share. To prevent this, after the widower has received the half, the residue is so divided between the two parents that the father receives $\frac{2}{3}$ of it and the mother $\frac{1}{3}$. The same rule obtains when a husband is deceased and his estate has to be divided between his two parents and his widow. The widow receives $\frac{1}{4}$, and of the remaining $\frac{3}{4}$ the father receives $\frac{2}{3}$ and the mother $\frac{1}{3}$. These two cases are called the two 'brilliant,' or the 'decided by Umar,' cases.

Another case is the *akdariyah*. The origin of this name is not certain. According to some Muslim writers, Akdar was the name of a *faqīh* whom Khalīf 'Abd-al-Malik consulted about the following problem. When a woman is deceased and her hsirs consist of (1) her husband, (2) her mother, (3) her paternal grandfather, (4) her sister (whether her full sister or her paternal half-sister), then these have together a claim to $\frac{3}{3}$ of the estate (the widower to $\frac{3}{6}$, the mother to $\frac{2}{6}$, the sister to $\frac{3}{6}$, and the grandfather to $\frac{1}{6}$). According to the rule mentioned above (the so-called *'awl*), the estate must, therefore, be divided into nine shares, so that the widower would receive three shares, the mother two, the grandfather one, and the sister three. To prevent the sister from inheriting three times as much as the grandfather, the $\frac{1}{6}$ share of the inheritance must in this case be so divided that the grandfather receives $\frac{2}{3}$ of it and the sister $\frac{1}{3}$. Thus the grandfather inherits $\frac{2}{9}$, and the sister $\frac{4}{9}$. According to the Ḥanifites, however, the widower inherits $\frac{3}{6}$, the mother $\frac{2}{6}$, and the grandfather $\frac{1}{6}$, while the sister is excluded by the grandfather.

As to the division of the estate among the *dhawu'l-arḥām*, if they inherit, there are two theories.

According to some lawyers, the right of these persons to inherit depends on the principle that only he who is next of kin to the deceased inherits, and that he excludes the more distant relatives. Others think that the *dhawu'l-arḥām* take the place of those blood-relations of the first and second group through whose intermediacy they are related to the deceased. Thus, if the estate must be divided between two persons A and B, of whom A is the daughter of the daughter of the deceased, and B the daughter of the daughter of his son, then, according to the first theory, B would be excluded by A, who is more closely related to the deceased; but, according to the second theory, A would take the place of the daughter of the deceased and thus inherit $\frac{1}{2}$, and B would take the place of the daughter of the son and thus inherit $\frac{1}{2}$ (see § 8 (*c*)). Moreover, according to the second theory, the residue of the estate also must be divided in the same proportion between the *dhawu'l-arḥām*, so that in this case A inherits $\frac{3}{4}$, and B only $\frac{1}{4}$. The latter theory is preferred by the Shāfi'ites, the former by the Ḥanifites.

He who deliberately and illegally has compassed the death of the deceased is unworthy to inherit, like the *murtadd* (*i.e.* he who is an apostate from Islām). The estate of the *murtadd* passes, according to the Shāfi'ites and Mālikites, to the treasury; according to the Ḥanifite scholars Abū Yūsuf and Muhammad ibn Ḥasan, on the other hand, the heirs of the *murtadd* have a right to his estate. Otherwise, according to the unanimous opinion of the *fiqh*-schools, there is no difference in general between believers and unbelievers in the law of inheritance.

No one can be regarded as an heir if it is not certain that he was still alive at the moment when the deceased died. If, therefore, various persons lose their lives by flood, conflagration, or other disasters without its appearing which perished first, there can be no inheritance between those persons. With regard to the case in which an heir is so long absent that his existence is doubtful, see § 2, p. 860[a]. An exception to the general rule is found in the case of a child who was not born at the moment of the death of his father; as soon as such a child comes into the world alive, it is regarded as an heir of its deceased father.[1]

9. **Slaves and freedmen.**—(*a*) *The rights and duties of slaves.*—In Muhammad's time there were many slaves in Arabia. It would have been impossible for him to abolish slavery. Islām, however, so far changed the position of affairs that for the future no Muslim might make a slave of a fellow-believer. According to Muslim canon law, slavery can arise only (1) through captivity, if a non-Muslim prisoner be taken by a Muslim; or (2) by birth, if the mother is a married slave.

Slaves are the property of their master (*saiyid*). He can dispose of them as of the rest of his possessions. He can, for instance, part with them by sale, gift, or testamentary disposition, hire them out, lend them, mortgage them, etc. A child, however, may not be separated from the mother so long as it is still in need of a mother's care (*i.e.* till about seven years old). The master may not make his slave work beyond his power, and must give him the necessary rest after his work. Slaves have also a right to *nafaqah* (maintenance, *i.e.* food, clothing, housing). The legal punishments for the misdemeanours of slaves are, generally speaking, less severe than for those of free persons.

Slaves have no right of property, nor can they, as a rule, make contracts or bind themselves by them. All that they acquire becomes the property of their master. When, however, he wishes to use the service of his slave for commercial purposes, the master may give him authority to carry out the necessary legal transactions (sale and purchase, etc.). The contracts which the slave then makes are binding and valid, so far as he remains within the limits of the power given him, and the goods which the master has entrusted to him to carry on the business serve as guarantee for the engagements made by the slave. If, on the other hand, the slave goes beyond his powers, he is himself alone responsible; and the creditors can obtain satisfaction from him after he has been set free. If slaves injure any one by a punishable act, the *saiyid* is liable to make good the damage, but he can free himself from this liability by giving up the guilty slave to the injured person.

The master has the right to live in concubinage with all his unmarried female slaves, if they confess Islām or belong to the so-called 'people of the book'—in the last case, however, according to the Shāfi'ites, only if the slaves belong to the true *ahl al-kitāb* (see § 5 (*c*) (3)). If any one has become an owner of the female slave of another person by means of sale, donation, or otherwise, he is not permitted immediately to live with her in concubinage, but must wait a definite period to see if she is not already pregnant.

Children born from the concubinage of the owner with his female slave are free (see § 7 (*a*)), and are

[1] See, further, W. Jones, *Al-Sirájiyyah, with a Commentary*, Calcutta, 1792; A. Rumsey, *Al Serajiyyah or the Mohammedan Law of Inheritance, with Notes and Appendix*, London, 1880, [2]1890; N. B. E. Baillie, *The Mookhummudan Law of Inheritance according to Aboo Huneefa and his Followers*, do. 1874; J. D. Luciani, *Traité des successions musulmanes (ab intestat)*, Paris, 1890; L. Hirsch, *Abdul Kadir Muhammed: der überfliessende Strom in der Wissenschaft des Erbrechts der Haneftes und Schafeites übersetzt und erläutert*, Leipzig, 1891; E. Sachau, 'Muham. Erbrecht nach der Lehre der ibaditischen Araber von Zanzibar und Ostafrika,' in *SBAW*, 1894, pp. 159–210.

in all respects equal with children born from marriage with a free wife. Among the Old Arabians a different rule obtained in this case: no children of female slaves were regarded as free. The female slave who has given her master a child is called *umm walad* (lit. 'mother of children,' viz. mother of one or more children of her master). After the death of her master she becomes legally free, and, therefore, after her confinement, may no longer be alienated or mortgaged.

Slaves male and female may contract a legal marriage with both free and unfree persons, so long as the former are not at the same time their owners; for, according to Muslim law, the master may marry only a female slave of another owner and not one of his own; and the same rule applies also to mistresses.

According to the Mālikites, slaves may even have four wives (free or not free); but, according to the other *fiqh*-schools, only two. A female slave is given in marriage by her master, who then acts as owner, not as *walī*, and need not ask her consent for the marriage. He also has the right to refuse to give her in marriage, though she ask him to do so. But, according to the Shāfi'ites, the master has not the right of forcing his male slave to a marriage; he is empowered only to refuse consent to a marriage; whereas, according to the Ḥanifites and Mālikites, the master has the right of giving even his male slaves in marriage against their will.

Just like a free man, the slave is obliged to give his wife a dowry, and must work for this purpose if his master does not pay the *mahr* for him. The dowry which a female slave receives becomes the property of her *saiyid*. A slave has the right of rejecting his wife twice, and the second *ṭalāq* has the same consequence in law for the slave as the third *ṭalāq* for a free man (cf. p. 868). The *'iddah* after the dissolution of marriage by death or divorce is also prescribed for female slaves, and lasts a shorter time than the *'iddah* of a free woman. Instead of the *'iddah* of four months and ten days, the female slave has one of two months and five days; the *'iddah* of three *qurū'* is replaced by one of two *qurū'*, and that of three months by one of a month and a half; in case of pregnancy the *'iddah* of a female slave does not end before her confinement.

Children born of marriages in which one or both of the parents are not free take the rank of the mother. Children of a married female slave are thus always slaves, and become the property of the master of their mother, independently of the question whether their father is a free man or a slave. Since it is regarded as undesirable for the children of a free man to become the slaves of another, the law condemns marriage between a free man and a female slave of another, except under the four following conditions: (1) that he has not sufficient means to pay the dowry of a free woman, (2) that he is not in a position to have conjugal intercourse with a free woman, (3) that the female slave whom he desires is a believer in Islām, and (4) that there is a risk that he will fall into immorality, so that the proposed marriage with a slave is, as it were, the last means of preserving him from that sin (cf. Qur'ān, iv. 29–30). The Ḥanifites, however, regard it as permissible for a free man to marry a female slave of another, without the first three conditions, provided she belongs to the *ahl al-kitāb* (cf. § 5 (*c*)).

(*b*) *Emancipation* (*'itq*) *of slaves.*—The setting free of slaves is regarded as a highly meritorious act for Muslims and well-pleasing to God. Muhammad said, according to a tradition: 'The setting free of a believing slave shall preserve the liberator from hell at the day of resurrection.' It is also one of the means by which a believer who has transgressed Allāh's law can in some cases make a reparation for his fault.

Every one who has the right of disposing of his property has also the right to set free his slaves, unless, *e.g.*, he has mortgaged them. If a slave belongs to various owners, and his freedom is given him by one of them, he becomes free if the liberator has at the same time made good to his partners the value of their share; otherwise, the liberation is valid only for the share of the liberator, and the slave becomes a *muba''aḍ* (*i.e.* partly free and partly not free).

The *umm walad* is legally free after the death of her master; if she has been formerly married and has children of that marriage, these children follow the rank of their mother, and become equally free at the death of the owner of their mother. A male or female slave who becomes the property of a blood-relation obtains a legal freedom *ipso facto*. According to the Shāfi'ites, this rule obtains only when the owner is one of those in the direct line of ascent or descent of the slave; but, according to the Mālikites, also if the slave becomes the property of his own brother or sister; and, according to the Ḥanifites, even if the owner is a *maḥram* of the slave, *i.e.* one who is related to him within the limits of kin which form an obstacle to marriage.

The master may also limit the liberation by certain conditions—*e.g.*, by the *tadbīr* and the *kitābah*.

(1) The *tadbīr* is a liberation by which the master declares that at his death his slave shall be free. So long as the *saiyid* lives, such a slave (*mudabbar*) is not different from others. According to the Shāfi'ites, the master even retains the right of parting with him and thus revoking his liberation; according to the Mālikites and Ḥanifites, such a slave may not be parted with, and the master may not revoke his *tadbīr*. The *tadbīr*, according to the unanimous opinion of Muslim lawyers, must be classed with a testamentary disposition. Since the heirs of one who dies intestate have a claim to at least ⅔ of his estate, the *tadbīr* is valid only if the value of a *mudabbar* is not more than ⅓ of the estate. If the value of the slave is greater, he becomes only partially free, unless the heirs sanction the disposition of the deceased.

(2) The *kitābah* (or *mukātabah*) is a liberation by virtue of an agreement with a slave. The name seems to be derived from the document (*kitāb*) in which the conditions of the contract were originally set out. This kind of liberation was customary among the Arabs before Muhammad. At that time slaves who were not ransomed by their relations sometimes obtained the permission of their master to earn their ransom by work. In Qur'ān, xxiv. 33, Muslims were recommended, if their slaves asked to redeem themselves in this way, to grant their request and to help them in its furtherance—*e.g.*, by giving them money or omitting part of the ransom. Some of the earlier *faqīhs* even regarded the master as obliged to do this.

The *mukātab* (*i.e.* the slave who makes this contract of liberation with his master) must bind himself to pay a definite sum of money to his master (the *mukātib*) as ransom (according to the Shāfi'ites, in at least two or more instalments). By the *kitābah* he obtains the right for the future of acquiring property for himself and of making contracts even without the express permission of his master. In other respects the *mukātab* remains in the same position as other slaves; his master, however, may no longer mortgage him or part with him, and, when he has paid his ransom, he is free.

The master may make another contract of liberation with his slave (the *'aqd al-'atāqah*, *i.e.* the liberation contract). This consists of the purchase of the slave by himself; he becomes free immediately, but is obliged to pay the ransom to the liberator as quickly as possible, or within a period agreed upon.

Between the liberator and his freed slave there continues to exist a certain relationship (*walā'*, *i.e.* patronage). The liberator becomes the *mawlā* (i.e. *patronus*) of the freed slave, and, if the latter has no *'aṣabāt*, the *mawlā* takes their place. The liberator then obtains the rights which usually depend on blood-relationship, such as the right of inheritance, the right to give in marriage his liberated female slaves, the right of retaliation, and others.

The *walā'* exists not only between the liberator and his freed slave personally, but also between the liberator and the descendants (and even the freed slaves) of the freed slave. After the death of the liberator the patronage passes to the next of kin of his *'aṣabāt* (cf. § 7 (*b*)). The same rules are also applied to a woman who has liberated a slave (*mawlāt, i.e.* liberatrix).[1]

III. *CONTRACTS, WILLS, 'WAQFS.'*—**10. General rules.** — The *fiqh*-books contain many special regulations for various contracts, but scarcely any general principles as to the responsibility of the parties, the establishment and annulment of rights and obligations, etc. They expressly forbid only agreements which are not precise or which depend upon accidental chances (*e.g.*, all assurance contracts), and these they declare invalid because of the possibility that one of the parties thereby binds himself to something which he cannot see in advance. The Muslim jurists call such an undesirable chance *gharar*.

No definite form for the making of a contract (*'aqd*) is prescribed. In consequence of Qur'ān, ii. 282, many of the earlier *faqīhs* thought that, when an agreement has not to be immediately fulfilled on either side, since the parties have agreed on certain terms of delay, the contract must be in writing, and concluded in the presence of witnesses. This was considered necessary, *e.g.*, for the so-called *salam* or *salaf*; this contract meant that a future harvest was bought and the price paid in advance. But this did not become the general opinion. The law-books insist only that the parties who make an agreement must make their intentions plain to each other. The legal form of an agreement is called its *ṣīghah*. The mutual declarations of the parties are called *īǰāb* (offer) and *qabūl* (acceptance). Only exceptionally is it permitted to make contracts without such an *īǰāb* and *qabūl* in matters of very little importance.

When two parties transfer to each other rights or claims, these must refer to matters which, according to the *sharī'ah*, have a real value for Muslims. Thus, regarded from a legal standpoint, all contracts are invalid which refer to forbidden musical instruments, to books which treat of philosophy, astrology, and other forbidden sciences, to grapes, which must serve for the preparation of wine, to dogs, pigs, and other ritually unclean things, etc. If such affairs are treated, it is not strictly a change of real ownership (*tamlīk*), according to the Muslim law-books, but rather a method of obtaining a *de facto* possession (*istilā'*).

The *fiqh*-books contain numerous precise regulations concerning the most common contracts and transactions, such as purchase, sale, hire, mortgage, gift, deposit, partnership, security and loan, etc. These transactions have the general name of *mu'āmalāt*. But this part of the law has only a theoretical and no practical value for the Muslim (see above, § 4). Principles different from those of the *sharī'ah* generally obtain in commercial life; and it is usually impossible even for the most pious Muslims to regulate their lives in this matter precisely according to the law-books. Therefore no further discussion in detail need be given here.

Fagnan, Algiers, 1909; Mahmoud Fathy, *La Doctrine musulmane de l'abus des droits* (with introduction by E. Lambert), Lyons, 1913; art. ''Abd,' in *EI* i.

The remarkable regulation of the Muslim law which forbids the charging of interest in trade must, however, not remain unnoticed. Not only usury in the strict sense, but the charging of interest at all is regarded as a great sin (*kabīrah*); and, although this prohibition has always been transgressed by numbers of Muslims, the pious try as far as possible to avoid direct offence against it.[1]

11. The prohibition against charging interest (ribā). — (*a*) *Introduction.* — In Muhammad's surroundings the practice of usury seems to have taken the form especially of a contract of exchange. The money-lender gave money or articles of commerce (*e.g.*, dates or barley) on condition that after a certain period a larger sum of money or a greater quantity of the articles received should be returned. If the debtor could not fulfil his obligation on the day when it fell due, the creditor gave him a postponement of payment, but doubled the amount of his debt. Such contracts of exchange were regarded as a sort of sale and purchase (*baī'*), and the postponement of payment was called *nasī'ah*. This usurious trade is strictly forbidden in various verses of the Qur'ān; see, *e.g.*, ii. 276:

'They say that there is no difference between *baī'* and *ribā*, but Allāh permits *baī'* and forbids *ribā*! . . . They who in future are guilty of *ribā* are destined for hell; they shall remain there for ever.' Cf. also ii. 276–279, iv. 159, and xxx. 38.

Thus no Muslim could doubt that usury was strictly forbidden in Islām, but in the earliest times there were many, and among them well-known companions of the Prophet, such as Ibn 'Abbās, who maintained that Islām prohibited only the abuse of the poverty of the debtor by constantly doubling his debt and ruining him. They regarded usury as forbidden only in a restricted sense; the *nasī'ah* was particularly deprecated. Others thought that by *ribā* (lit. 'multiplication') the Prophet had meant not only usury, but all charging of interest. Later on this opinion became general. Thus, if a Muslim wishes to lend money or articles of commerce to any one, he can do so only on condition that the debtor, after the expiration of a certain period, shall pay him back the same sum of money or the same quantity of articles lent him. No profit may be made out of him; the value which the creditor receives must be the same as that which he has given. If the purpose is not to give a temporary convenience to the other party, but only to exchange goods, this is permitted only if both parties receive goods of the same value and at the same time. One who does not observe these rules is guilty of *ribā*. It is, therefore, necessary to distinguish two kinds of *ribā*: (1) *ribā* by contract of exchange, (2) *ribā* by loan (*mutuum*).

(*b*) *Ribā by contract of exchange.*—The regulations of the law-books concerning the first kind of *ribā* are based on traditions, according to which the Prophet had expressly declared that it was prohibited to a Muslim to exchange gold for gold, silver for silver, dates for dates, etc., unless both parties simultaneously made the same payment to each other. These words of the Prophet are handed down in various recensions, in which gold, silver, barley, wheat, and dates (sometimes also raisins

[1] See, further, for contracts in general, R. Grasshoff, *Die allgemeinen Lehren des Obligationenrechts sowie die Lehre von den Realkontrakten nach der Rechtsschule des Imâm Esch-Schâfi'i: ein Abschnitt aus dem Kitâb el-bujû des Abû Ishâk Esch-Schîrâzî übers. und comm.*, Königsberg, 1895; C. Gatteschi, *Real Property, Mortgage, and Waqf according to Ottoman Law* (tr. A. van Dyck), London, 1884.

and salt) are specially mentioned as the objects of the forbidden contracts of exchange.

Some scholars, and especially the Ẓāhirites, thought that they must keep strictly to the words of these traditions; they regarded the *qiyās* as forbidden only in these cases (see § 2), and considered that the regulations concerning *ribā* could refer only to the exchange of articles expressly named in these traditions. The majority of jurists, however, could not agree to such a limitation of the *ribā*. They thought that gold, silver, and other articles were mentioned in the tradition only as examples. The Ḥanifites considered that the rule which in the tradition was expressly given for dates, barley, etc., could be applied to all other articles of sale which were measured by weight; the Mālikites thought that dates, barley, and wheat ought to be regarded as examples of articles which were kept in shops to be used as food; the Shāfi'ites regarded the prohibition of *ribā* as applicable to the exchange of all articles of value (*athmān*) and all forms of food.

Articles which are regarded as subject to the prohibition of *ribā* are called *māl ribawī*. If it is desired to exchange such articles, two courses are possible. (1) When two articles not of the same kind are concerned (*e.g.*, gold and silver, or dates and barley), delivery must take place on both sides at once, but the parties are not bound to give each other the same quantity. (2) If, on the other hand, two articles of the same kind are exchanged (*e.g.*, gold for gold, and silver for silver), the parties must immediately hand over to each other the same quantity. It is, therefore, possible by the exchange to be guilty of *ribā* in three ways: (*α*) if one of the parties receives more than the other, this is *riba'l-faḍl* (*i.e.* usury because of the greater payment); (*β*) if the two parties do not receive the payment due to them at the same time, they are guilty of *riba'l-yad* (*i.e.* usury with regard to the possession); (*γ*) if they expressly make a condition of postponement, this must be regarded as *riba'l-nasā'* (*i.e.* usury with regard to the conditional postponement). The purpose of these regulations of Muslim law was apparently to prevent men from making themselves guilty of usury by means of the exchanges customary in Muhammad's time, by which the debtor, after the expiration of the period agreed upon, had to pay back a greater amount of money or of articles of sale than he had received.

(*c*) *Ribā by loan.*—When it is not a matter of contract of exchange but of loan (*mutuum*), Muslim law forbids the creditor to make a condition of interest or of other advantage on any pretence whatever. The prohibition of *ribā* is in this case not limited to gold, silver, food, etc., but is applicable to everything that can be lent.

When a Muslim lends money to a co-religionist, this may be merely a kindness exclusively for the benefit of the debtor, and is recommended for this reason. If the debtor wishes to show his gratitude to his creditor for the support he has received, and to return more than he received, this is permissible, but the creditor may not make it a condition beforehand.

As may easily be understood, Muslims have from the beginning endeavoured to escape this prohibition. Means were often found of demanding high interest without openly coming into conflict with the words of the law.

One of these means was the following. Two fictitious contracts of sale were made; the creditor sold an article to the debtor, on condition that he would later on pay the sale price agreed upon; hereupon the creditor bought the same article back again from the debtor, but for a lower price, which he paid at once. By this means the debtor actually obtained a certain sum of money, and was obliged after a fixed time to pay back a much greater sum as purchase money. This double contract of sale was well known in Europe in the Middle Ages. It was called *mohatra*, apparently a corrupted pronunciation of the Arab. word *mukhāṭarah*.[1] This Arabic name proves that the custom did not arise in Europe, but was taken over from the Muslims.[2]

12. Obligations arising from oaths and vows.—Oaths and vows have always played a great part in the various Muslim lands. The obligations which spring from them have a religious character in the eyes of Muslims. The ancient Arabians were accustomed to enforce by oaths not only their alliances and other important agreements, but even every sort of promise and statement in ordinary life;[1] and vows of abstinence were made as a preparation for the holding of religious ceremonies, the prosecution of blood-feuds, and other important acts. No one lightly decided to break the oath or vow which he had once made, for he feared to be punished for such a sin by the wrath of God.

The Prophet himself often strengthened his words, according to the custom of the time, by oaths and vows. He did not, however, consider himself as unconditionally bound by them, but thought that it was in some cases better to appease God's wrath for the breaking of an oath by means of an atoning sacrifice (*kaffārah*) than to hold obstinately to the oath. 'When I have sworn an oath that I will do something, but later on perceive that it is better to act differently, I offer an atoning sacrifice and break my oath,' was Muhammad's customary statement, according to tradition.

In Qur'ān, v. 91, the regulations are given as to the religious acts by which a Muslim who acts contrary to his oath can turn aside God's wrath. The penance (*kaffārah*) must then consist in feeding or clothing ten poor persons, in manumitting a slave, or, in the case of a person who has no means, in fasting for three days (cf. also lxvi. 2). The jurists have worked out these rules in still fuller details—*e.g.*, fixing the minimum of food or clothing which must be given; they differ in their opinions as to the particulars; according to the Shāfi'ites, the manumitting of a slave can serve for *kaffārah* only if the slave is a believer.

An oath is called *yamīn* and a vow *nadhr*. The rules concerning oaths and vows differ in various points. A vow is binding only when a Muslim who is qualified according to the legal regulations to make an independent agreement has voluntarily taken upon himself to carry out an act which is meritorious, regarded from a religious standpoint, and to which he was not bound apart from his vow. In this way it is possible to be bound by a vow to set free slaves, to give alms to the poor, to make a pilgrimage, and so on. He who has bound himself by a vow remains permanently obliged to fulfil it, and cannot free himself from it by a *kaffārah*. If, however, the vow has been made dependent on a condition (*e.g.*, 'If I recover from my illness, I will fast for a certain number of days'), he is bound to fulfil his oath only when the condition has really been fulfilled. A vow to do something which is forbidden or to omit something which is obligatory may not be regarded as binding. Muslim jurists also consider that no one can bind himself by a vow to do or to omit what is merely permitted but not meritorious (or forbidden)—*e.g.*, to drink water. In such cases there is no obligation to a *kaffārah* even if the vow be not fulfilled.

Oaths, on the other hand, are subjected to another rule; for he who has sworn by an oath to do or not to do anything is always bound to a

[1] There are two kinds of oaths: (1) the oath by which it is sworn that a statement or testimony contains the truth; this oath refers to that which has already happened (see below, § 16 (*b*)); (2) the oath by which one swears to act or not to act in a certain way; this oath refers to a future event, and is discussed here.

kaffārah if he breaks his oath, even though he had pledged himself to do something which is forbidden, or to omit something which is obligatory.

Moreover, Muslim jurists deal at length with various special oaths and vows and the questions connected with them; even in very short *fiqh*-books there are usually full details as to this subject. The following cases, *e.g.*, are mentioned in particular. When a man has declared, 'If such and such is done, I will apostatize from Islām,' if the conditions are fulfilled, he may not, it is true, give up his faith, but must nevertheless, according to the Ḥanifites, offer a *kaffārah*. On the other hand, if a man has declared, 'If I do such and such, or if such and such happens, my wife is repudiated, or my slave is set free,' he is actually bound by his words, and, on the fulfilling of the conditions, his wife must be regarded as repudiated and his slave as free.

An oath is valid only when it has been taken either in the name of Allāh (or in that of one of His attributes) or by the Qur'ān. Other oaths, *e.g.*, by calling on the Prophet, are not binding.

13. Wills.—Muslim law only partially recognizes the right to make a will. When the debts of the deceased have been paid, his legal heirs (see § 8) have a claim to ⅔ of the residue of the estate. The testator may dispose by will (*waṣīyah*) of only the remaining ⅓ of the estate. If he has disposed of more than ⅓, his arrangements and legacies are valid only if, and so far as, they are sanctioned by his heirs.

As to this rule, there is no difference of opinion among the *fiqh*-schools. It is based on the following tradition.

Sa'd ibn Abī Waqqāṣ, one of the contemporaries of the Prophet, had decided to devote the whole of his property after his death to pious purposes. Once, when he lay dangerously ill, he explained his plan to the Prophet, who, he thought, would value his pious deed. This was, however, not the case; on the contrary, Muhammad forbade him to disinherit his heirs. 'It is better to leave them rich,' said he, 'than to force them to beg after your death.' Finally, the Prophet consented to Sa'd's petition to dispose of ⅓ of his estate.

From this tradition the Muslim jurists have deduced another principle. Every Muslim may dispose of his property as he wishes during his life, and thus may even give everything away if he wishes; but this right ceases if he is seriously ill. In that case only ⅓ of the property may be disposed of by gift, the manumitting of slaves, etc. The property of a seriously sick person is thus treated as in some degree similar to an estate to which the heirs have a claim.

This rule is also applicable to persons who in other ways are in danger of their lives—*e.g.*, to any one who is taking part in a battle, to a woman during childbirth, to the inhabitants of a district which is suffering severely from plague, etc. If, during a serious illness, or while he was in other respects in danger of his life, a person has given away more than ⅓ of his property, his arrangements are valid only if his heirs offer no opposition to them, or if he has recovered from his illness or escaped the danger in which he was.

Further, the legality of a *waṣīyah* depends principally on (1) the right of the person who makes the will (*al-mūṣī*), (2) the right of the one who benefits by the will (*al-mūṣā-lahu*), (3) the property which is disposed of (*al-mūṣā-bihi*), and (4) the form of the will. The law-books contain the following regulations as to these four subjects. (1) Only those who have the power of independent disposition over their property have the right to make a will; minors are not qualified. Moreover, the *waṣīyah* is valid only if the testator had the right to dispose of what he left, and if he acted without compulsion. The testator remains qualified to revoke his will up to the time of his death. (2) The beneficiary under a will must at the moment at which the will is made be qualified and in a position to become the owner of what is left him. A will made in favour of an unborn child is valid, however, if the child be born within the next six months. Those who already inherit by the enactment of the law have no right to receive further legacies by will. According to tradition, the Prophet forbade the alteration, by means of testamentary disposition, of the shares fixed for them by law (see above, p. 862[a]); if the will is not made in favour of a definite person, but for a hospital, a mosque, or similar institution, then the purpose must be one which is permitted by law; *e.g.*, a will in favour of a Christian church or a Jewish synagogue is invalid. (3) The objects which are left to any one in the will must be accurately described, and of such a nature that it is possible to take possession of them. The testator may not, for instance, leave any forbidden musical instruments or dogs to any one; or a copy of the Qur'ān, or a Muslim slave, to a Christian or other unbeliever. (4) No special form of will is prescribed; the law directs only that the testator should make his will clearly known in the presence of persons who can bear witness that he has really made such a testament. It need not be reduced to writing. Besides the allotment of property, the will may contain certain other dispositions—*e.g.*, the appointment of an executor who is charged with the care of the payment of debts, and of the division of the estate; further, the nomination of a guardian for the children of the testator who are under age, etc.

The beneficiary of the will first receives possession of the property left him when he has accepted the arrangements of the testator (by means of *qabūl*; see § 10). If he should predecease the testator, his heirs are qualified to accept the will in his favour.[1]

14. Regulations concerning the waqfs.—By a *waqf* Muslim law means something which is withdrawn from commerce, in order to reserve it for religious purposes or for the benefit of definite persons. To the question whether such a disposition is lawful in Islām Muslim scholars originally gave various answers. Some considered that the rights of the heir were injured by such dispositions. Others declared that the heirs had no claims on any man's property so long as he still lived, and, therefore, a man might withdraw his goods from commerce, just as he had the right to contract debts, to set free slaves, and to give away property, to the injury of his heirs. According to Abū Ḥanīfah, a *waqf* was not irrevocably binding; 'he who has made a *waqf* of anything,' said he, 'remains the owner of it, and can always revoke his disposition if he will.' The majority of Muslim lawyers, however—and among them Abū Yūsuf and Muhammad, the two pupils of Abū Ḥanīfah—considered that the disposition by which anything was made a *waqf* was irrevocably binding. By making such a disposition, they said, the owner loses his right of ownership; only Allāh remains the owner of that which is *waqf*. Others held that the ownership of a *waqf* passed to those who benefited by it.

Those who regarded the *waqfs* as allowable appealed for support to the traditions according to which various comrades of the Prophet had made such dispositions with his approbation. The best-known tradition is the following. 'Umar, the second Khalīf (or, according to others, his son 'Abd-Allāh), had a piece of land at Khaibar which he valued greatly. He decided to devote it to religious purposes. With the approbation of the Prophet, he made a *waqf* of it, and enacted that it might for the future be neither sold nor given away, and that the income should be devoted exclusively to the poor and to religious purposes.

Waqf properly means the transaction itself, *i.e.* the devotion of property to religious purposes; other words used in the same sense are *tasbīl*, *i.e.* devote to the 'way of God' (*sabīl Allāh*); *taḥrīm*, *i.e.* the declaration that something is *ḥarām* ('forbidden,' 'inalienable'); and *ḥabs*, *i.e.* to make fast (in other words, to make inalienable). Both *waqf* and *ḥabs* are also used to indicate that which is

[1] See, further, F. Peltier, *Le Livre des testaments du Çaḥîḥ d'El-Bokhâri*, Algiers, 1909.

withdrawn from commerce; in the latter sense the plurals of *waqf* and *ḥabs* are *wuqūf* and *ḥubūs*.

The Muslim law-books contain the following regulations concerning *waqf*. (1) *The wāqif*, i.e. *the person who makes a waqf of anything.*—No one is qualified to make such a disposition unless he has the independent right of alienating his property. He who withdraws anything from commerce must at the same time be the owner of it; otherwise his disposition is invalid. Unbelievers have the right of making their property a *waqf* if the purpose of it is not contrary to Islām; *e.g.*, a Christian in a Muslim land is forbidden to make his dwelling a *waqf* in order to have it turned into a church.

(2) *The mawqūf, or waqf*, i.e. *that which is made a waqf.*—According to the Shāfi'ites, it is permissible to make a *waqf* of moveable as well as of immoveable property, at least so far as the moveables are not immediately destroyed by use (*e.g.*, food, or wax candles which are designed for the illumination of a mosque). Forbidden instruments, books whose contents give signs of unbelief, and similar articles cannot in any case be made *waqf*. Many other Muslim scholars regard the regulations concerning *waqf* as applicable only to immoveable property, and recognize only a few exceptions to this rule. According to the Ḥanifites, beasts of burden and weapons may be designated *waqf*. Books are also often withdrawn from commerce in all Muslim lands, and especially devoted to an appointed library or mosque.

(3) *The mawqūf 'alaihi*, i.e. *he who receives benefit from the waqf.*—This person must be qualified to make use of the property; *e.g.*, it would not be permissible to make a copy of the Qur'ān *waqf*, and a believing slave could not make a *waqf* in favour of unbelievers. As to the question whether the person who derived benefit from a *waqf* must be so indicated that the institution may remain for ever, a difference of opinion exists. Some think that it is necessary for the *waqif* to indicate an unending series of persons for whom the *waqf* is destined; others hold that a *waqf* has a permanently valid continuation even if this is not specially indicated by the founder; 'if there are no surviving persons who, according to the disposition of the *wāqif*, have a claim to the income of a *waqf*,' they say, 'then the income is intended for the poor.'

Waqfs need not be exclusively intended for religious or philanthropic purposes; according to the majority of Muslim lawyers, it is sufficient if the purpose of a *waqf* is merely permissible. In the Shāfi'itic law-books it is expressly stated that a *waqf* may even extend to the advantage of the rich. Many *waqfs*, such as mosques, cemeteries, and water supplies, are intended for the rich as well as for the poor. The law-books especially recognize the validity of a *waqf* in favour of some one's family. In this case, if any one has decided that property belonging to him shall be a *waqf* for his children and further descendants, and these become extinct, then, according to the majority of Muslim lawyers, his further relatives have a right to the income of the *waqf*, and after them the poor.

(4) The *ṣīghah*, *i.e.* the form in which the *wāqif* makes his will known, is not generally subjected to special regulations. It is sufficient if the founder makes his meaning plain by pointing out what property shall be *waqf*, and to what purpose it must be given. It is, however, not permissible to make the existence of a *waqf* dependent on a condition or a period of time. Therefore a *waqf* is invalid if the *wāqif*, for instance, declared, 'If I get a son, then is my house a *waqf*,' or if he made his property a *waqf* 'for ten years.' According to many Muslim writers, one may, however, distinguish between *waqfs* which have a general purpose (*e.g.*, for philanthropic purposes) and those which are intended only for definite persons (*e.g.*, for the descendants of the founder). In the first case the disposition of the *wāqif* must be preserved as far as possible, and thus only the conditions or designation of a period must be declared invalid, and not the institution itself; in the latter case there is no opening for this, and the *waqf* itself is invalid.

An exception to this rule is that the *wāqif* may make the existence of a *waqf* dependent on his own death. He may decide that property shall become a *waqf* after his death. Such a disposition is, however, subject to the general regulations concerning wills, and may be withdrawn by the owner up to his death; moreover, only ⅓ of the estate may thus be made a *waqf*, since the heirs have a right to the other ⅔.[1]

IV. *PUBLIC LAW.*—15. **The imām.**—(*a*) *The election of an imām.*—According to the legal theory, the Muslim community must be guided by an *imām*, who is to be regarded as the *khalīfah* (*i.e.* substitute) of the Prophet.[2] The quarrels as to the *imāmat* in the first centuries after Muhammad divided the Muslims into various religious-political parties, which partially continue to the present day. To them belong especially the Shī'ites and Khārijites, who are regarded as heretics by orthodox Muslims. The opinions of these parties differ in many respects—as to political questions, as to who must be regarded as the legitimate *imām*, and as to the requirements which he must fulfil.[3] We must at present limit ourselves to a sketch of the regulations which obtain in this matter among the orthodox.

All questions regarding the *imām* must be decided according to the position of affairs during the first thirty years after Muhammad. That period, in which the Muslim community was led by Abū Bakr, 'Umar, 'Uthmān, and 'Alī—the so-called 'rightly guided khalīfahs' (*al-khulafā' al-rāshidūn*)—with the help and co-operation of the most faithful comrades of the Prophet, is regarded among orthodox Muslims as the 'Golden Age' of Islām; and, according to them, the principles followed at that time must be regarded as the only correct ones.

The *imām*, therefore, like the four immediate successors of the Prophet, must belong to his tribe, and thus be a Quraishite. The Shī'ite doctrine that the *imām* must be also a descendant of the Prophet is rejected by the orthodox. Moreover, (1) the *imām* must be a free, male Muslim of full age, recognized as *'adl* (see p. 864[b]); (2) he must be competent to manage the business of the State, and, above all, have the spirit and courage to fight against the unbelievers and to protect Muslim territory. (3) The *imām* ought also, properly speaking, to be a *mujtahid* (see p. 860[b]), competent, if necessary, to settle difficult religious

[1] See, further, J. Krcsmárik, 'Das Wakfrecht vom Standpunkte des Sarî'atrechtes nach der ḥanefitischen Schule,' in *ZDMG* xlv. [1891] 511–576; E. Clavel, *Droit musulman: le waqf, ou habous, d'après la doctrine et la jurisprudence (Rites ḥanafite et malékite)*, Cairo, 1896.

[2] In most Muslim countries the popular view was that the *imām* was the substitute of Allāh Himself. Accordingly, many *imāms* were called *khalīfat Allāh* (*i.e.* substitute of God), but many Muslim scholars disapprove of this title. See I. Goldziher, 'Du Sens propre des expressions "Ombre de Dieu, Khalife de Dieu" pour désigner les chefs dans l'Islam,' in *RHR* xxxv. [1897] 331–338.

[3] See D. B. Macdonald, *Development of Muslim Theology*, pp. 7–63; J. Wellhausen, 'Die religiös-politischen Oppositionsparteien im alten Islam,' in *AGG*, phil.-hist. Kl., new ser., no. 2 [1903]; I. Friedländer, 'The Heterodoxies of the Shiites in the Presentation of Ibn Hazm,' in *JAOS* xxviii. [1907] 1–80, xxix. [1909] 1–183; I. Goldziher, 'Beiträge zur Litteraturgesch. der Shî'a und der sunnit. Polemik,' in *SWAW* lxxviii. [1874] 439–524; R. E. Brünnow, *Die Charidschiten unter den ersten Omayyaden*, Leyden, 1884.

situations on his own authority, just as the immediate successors of Muhammad were held to have been perfect scholars. Since, however, such *ytihād* was regarded as beyond the reach of later generations, such learning can no longer be demanded even of an *imām*. (4) An *imām* may have no physical infirmity, or defect of intellect; serious defects, such as blindness, deafness, or insanity, disqualify a candidate for the *imāmat*. Consequently, a *khalīf* was often made blind after his deposition, in order to prevent him from attempting to recover his position.

At the election of an *imām* it is necessary to follow the principles which obtained in the 'Golden Age.' Inheritance, according to the law, gives no claim to the *imāmat*. Each *khalīf* must be elected, and his election is valid only if (1) he, like the first *khalīf* Abū Bakr, receives the homage of a certain number of Muslims of high rank ('those who are qualified to bind and loose'); or if, (2) like the second *khalīf* 'Umar, he is appointed by the former *imām* as his successor. 'Those who are qualified to bind and loose' and have the right of electing an *imām* consist of Muslims of full age, of the male sex, free men who are recognized as *'adl*, and can judge what persons have the necessary qualifications to be elected as *imām*, and which among those who come under consideration is the most suitable for the position under existing circumstances.

The election of an *imām* is a *farḍ al-kifāyah*; *i.e.*, as soon as this task is fulfilled by some qualified person, all others are relieved from the duty (see p. 863[b]). 'The election of an *imām*,' say the Muslim scholars, 'it is true, is usually carried out by the leading circles in the capital, and is acquiesced in in the other parts of the land (as at the election of Abū Bakr), but the electors in the capital have no right of preference above those in other places.' If different persons are elected as *imām* in different places, a new election must be held between these candidates. The *faqīhs* are not agreed as to the number of electors which must be demanded for a valid election. Some of them require at least five electors, and in support of this opinion appeal to the election of the third *khalīf* 'Uthmān, but others regard the election by even one elector as valid if he is a universally respected and influential man.

If the *imām* himself nominates his successor, the choice is binding on all Muslims, if the chosen person has the qualities necessary for an *imām* and expressly accepts his nomination. In appointing his successor the *imām* need not consult the electors; he may also indicate several persons to succeed him in a definite order one after the other. But Muslim lawyers consider that a father has no right to appoint his son as his successor, since they regard no one as capable of forming an unprejudiced judgment as to whether his son is fitted for this high dignity.

(*b*) *The rights and duties of the imām.*—The *imām* is not only the spiritual head of the Muslims, as has been often incorrectly assumed in Europe; he is at the same time the highest secular authority in Islām. There is no idea among Muslims of a separation between spiritual and temporal power. In this respect the position of the first thirty years after Muhammad is copied. The *imām* must, like the four 'rightly led' *khalīfs*, wage war against unbelievers, see to the contribution of the *zakāh*, resolve differences of opinion in the community, take care that the regulations of the *sharī'ah* are respected and that transgressions against it are punished, take action against heresies, try to bring the erring back to the right way, etc. If it appears that the *imām* is incompetent to fulfil his office, or that he abuses his power, then 'those who can bind and loose' must depose him and choose a new *imām*.

Every Muslim is bound in loyalty and obedience not only to the legitimate *imām*, but also to any one who has made himself *de facto* master of the highest authority, even though he has not the requisite qualities (*e.g.*, a woman, a person who is under age, ignorant, not an Arabian, or a sinner), and even if he has not been appointed as *imām* in a legal manner. Such a potentate, who in the *fiqh*-books is usually called 'the holder of power' (*dhū'l-shawkah*), is not a legitimate *imām*, but orthodox Muslims nevertheless regard it as necessary for believers to recognize his authority, at least when he does not force them to sin against the law.

This opinion apparently arose as early as the first century after Muhammad. During the incessant strife of the Umayyads against the religious rebels, who would not recognize their authority, the opinion became established, among the majority of the people and among the leading scholars, that it was better, for the prevention of greater disasters, not to resist the tyrant even though he did not fulfil the theoretical ideals. Traditions arose that the Prophet himself had foretold this state of affairs, and had enunciated the doctrine that it was a duty for all Muslims to submit to the ruling princes. 'Thirty years long,' the Prophet is reported to have said, 'shall you be happy under the government of my successors, but after this the dominion shall pass to tyrannous princes.' The companions of Muhammad asked, 'Must we not contend against such godless potentates?' 'No,' he answered, 'so long as they do not interfere with the *ṣalāt*.' According to another saying of the Prophet, 'a Muslim must be obedient both in matters which he approves and in those of which he disapproves, so long as no acts are enjoined on him by which he would transgress the laws of God. In the latter case he need neither listen nor obey.'

On the ground of this theory the later Muslim princes and *khalīfs* had a claim on the obedience of their subjects, even though they were not appointed according to the regulations of the *sharī'ah* and did not possess the legally required qualities. Opposition to princes who are not of Quraishite (or even of Arabian) origin, such as the Turkish Sulṭāns, and who have, therefore, theoretically no right to the Khalifate, is from a religious standpoint not permitted for Muslims, unless the prince has to be deposed because of his bad government.

16. **Legal procedure.**—(*a*) *Regulations concerning the qāḍī and trials.*—A very important duty of the *imām* is to appoint a sufficient number of judges. Acting as judge is regarded by Muslim scholars as a *farḍ al-kifāyah* (see p. 863[b]). Thus no one is obliged to accept the office of judge when the duty can be fulfilled satisfactorily by others; when this, however, is not the case, to act as judge becomes a personal duty (*farḍ al-'ain*); under such circumstances every one who is able to give a decision according to the regulations of the law is obliged to be a judge.

A *qāḍī* (judge) generally must be a free male Muslim of full age, who is recognized as *'adl* (see p. 864[b]), and is fully acquainted with the regulations of the canon law. In theory the judge must even be a *mujtahid* (see p. 860[b]), and be able, in passing a sentence, to deduce independently from the sacred sources the rules to be applied. But, as has already been stated, among the later Muslims no one was any longer regarded as qualified to give an independent judgment in *fiqh*-matters; therefore even a judge can at present be only a *muqallid*, and must keep in every respect to what is prescribed in the authoritative *fiqh*-books of his *madhhab*.

In order to secure the independence of the judge, the law forbids the *qāḍī* to accept presents, except from his relatives in the direct line (because, according to the law, he can never give a decision in their favour). For the same reason, according to all except the Ḥanifites, judges are forbidden to engage in commerce, because it would be possible to give them exceptional advantages in trade, in order to obtain their favour.

The judge controls the trial, and is not generally bound by legal regulations for this purpose. He is obliged only to give sufficient opportunity both

to plaintiff and to defendant (*al-mudda'ī* and *al-mudda'ā 'alaihi*) to present their declaration and arguments. He must treat both parties equally, provided they are both believers; he must also refrain from exercising influence on the witnesses. He is permitted to endeavour to bring about friendly relations between the parties, and to recommend the cause of one party to the good will of the other.

If the defendant admits that the plaintiff is right, the latter is not obliged to prove his contention. Such an *iqrār* ('acknowledgment') may, however, be regarded as valid only if it has been made before the judge by a defendant of full age, in full possession of his intellectual faculties, without any compulsion. If the contention concerns the payment of a debt or other questions concerning property, he who makes the acknowledgment must also be *rashīd* (see p. 871[a]).

If, on the other hand, the defendant contests the contention of the plaintiff, he cannot lose his case until the plaintiff has proved his claim by evidence. If, however, the matter in hand is so accurately known to the judge that he can himself give evidence, he may, according to the Shāfi'ites and Ḥanifites, give sentence without further proof on the sole ground of his personal knowledge; according to the Mālikites, he has not this right. All Muslim schools are agreed that the judge is never obliged to give sentence on the ground of formally valid proof, against his better knowledge.

(*b*) *Legal theory regarding evidence.*—Written documents cannot be regarded as valid evidence, unless their contents are confirmed by trustworthy witnesses; the force of the proof, however, is then no longer in the document, but in the oral evidence. An exception is formed to this rule by documents sent from one judge to another. In practice it is frequently necessary to recognize exceptions to this rule.

Legally recognized evidence consists principally in (1) proof borne by witnesses, and (2) the sworn testimony of the parties before the judge.

(1) Testimony (*shahādah*) has the force of proof only if it is borne by a Muslim of full age, who is not under guardianship, and is recognized as *'adl* (see p. 864[b]). If the judge knows a witness personally, he need not inquire whether he is *'adl*; otherwise, according to the Shāfi'ites and Mālikites, he may give no credence to the testimony till two trustworthy male witnesses have assured him that the witness is *'adl*, even though the other party in the case make no objection to his credibility; according to the Ḥanifites, such an inquiry is called for only in the case of *ḥadd* and *qiṣāṣ* (see art. CRIMES AND PUNISHMENTS [Muhammadan], §§ 2, 5), and if the other party throws doubt on the credibility of the witness.

Inquiry into the credibility of the witnesses is usually handed over by the judge to two of his officers who bear the title of *muzakkī*, *i.e.* one who declares the witness to be *zakī* ('without sin,' 'pure'). In many Muslim lands there are also persons with the title of *'adl* or *shahīd*, who fill much the same rôle as a notary. They are appointed by the *qādī*. If two parties wish to make an important contract or sale, or to set on foot other transactions, they may go to such an *'adl* that he may witness the contract. If, later on, there is litigation between the parties with reference to this transaction, the *'adl* may be heard by the judge as a trustworthy witness.

When it is established that a witness is *'adl*, his evidence is held to be worthy of belief, without his having to swear on oath that he will speak the truth. Only in a few cases may the judge attach to the evidence of an *'adl* no value as proof—*e.g.*, when the witness is related in the direct line to one of the parties and testifies in his favour, or if he is an enemy of one of the parties and testifies against him. According to the Ḥanifites and Mālikites, husband and wife cannot give valid evidence against each other, though the Shāfi'ites allow this.

Since only a few Muslims live so strictly according to the regulations of the canon law that they may really be regarded as *'adl*, the judges in Muslim lands must very often content themselves with the declarations of witnesses who do not fulfil the legal requirements. In such cases their declarations are not legal testimony in the strict sense.

The testimony of Christians, Jews, and other unbelievers must be regarded as worthless; the judge may attach no credence to the declarations of persons who deny the most important truths in the sphere of Muhammadanism.

The number of witnesses by whom either of the parties can prove a declaration depends on the subject in hand. If the parties are disputing as to debt or property, then, according to Qur'ān, ii. 282, the evidence of at least two men, or of one man and two women, is required; according to the Shāfi'ites and Mālikites, one male witness is in such a case sufficient, if the party who calls him takes an oath that he (himself) has spoken the truth (and, according to the Mālikites, even two women in this case may take the place of the male witness).

If the case is not concerned with money, the law demands (*α*) the witness of two men, if they must testify as to subjects which are generally known only to men—*e.g.*, retaliation and the price of blood; (*β*) the testimony of a definite number of women, if points have to be proved which are usually known only to women—*e.g.*, the physical infirmities of women, foster-relationship, childbirth, etc. As to the number of female witnesses required in the latter case, the opinions of the *fiqh*-schools differ; the Shāfi'ites demand four women or two women and one man, the Mālikites two women, and the Ḥanifites one only. If the case concerns a *ḥadd*, the witness of women must be regarded as worthless; in this case proof can usually be given only by two male witnesses, and in cases of adultery only by four male witnesses.

(2) The oath (*yamīn*), according to the Shāfi'ites and Mālikites, may be administered by the judge to one of the parties in order to make the evidence of one male witness or of two female witnesses a sufficient proof. The defendant is obliged to take an oath that the plaintiff is in the wrong, if the latter cannot prove his claims legally. If the defendant refuses to take this oath, the plaintiff, according to the Shāfi'ites, must be given the verdict if he is ready to swear to the truth of his contention; according to the Ḥanifites, this oath of the plaintiff is not necessary, and the judge must immediately condemn the defendant if he refuses to swear that the plaintiff was in the wrong; according to the Mālikites, the oath of the plaintiff is required only in some special cases.

The expiration of a long time is not properly recognized in Muslim law as a means of acquiring property or gaining freedom from debt, but, when it appears that a plaintiff has neglected to institute a suit for an exceptionally long time without good reason, this must be regarded as a proof that he knew himself that he had no case. As to the length of this term of limitation the opinions of Muslim scholars differ. In practice an ordinance of the Turkish Sulṭāns is usually followed, who decreed (towards the end of the 16th cent.) that the judges might not grant a suit if it appeared that the plaintiff had without good reason neglected to bring forward his case for fifteen years (see C. Snouck Hurgronje, 'Iets over verjaring in het Moeham. recht,' in *Tijdschrift Bataviaasch Genootschap*, xlii. [1900] 393–427).

17. The holy war (jihād).—(*a*) *The duty of believers to take part in the holy war* (*jihād*).—

Another important religious duty of the *imām* and the Muslim community is the holy war against unbelievers—the *jihād* (*i.e.* 'to take trouble,' 'exert oneself,' striving 'on the way of Allāh' [*fī sabīl Allāh*])—in order violently to convert the heathen to the true faith, or at least to subject them to the yoke of Islām.

In the earliest period of Islām, Muslims were forbidden to take measures against the unbelieving inhabitants of Mecca who persecuted and ill-treated them, but after the *Hijrah* the position was altered. In Qur'ān, xxii. 39–42, Allāh declared that in future Muslims should be permitted to defend themselves if they were attacked, and that in so doing they could count on God's support.

'When they strive against their persecutors,' it is stated in these verses of the Qur'ān, 'it is permissible: Allāh is powerful enough to help those who are driven out of their homes unrighteously, merely because they said, "Allāh is our Lord." If God did not help men against each other, hermitages, churches, synagogues, and all places of prayer where God's name is often glorified would be rendered desolate,' etc.

This permission to ofier defence against attacks was soon afterwards changed into a command actually to attack the unbelievers, and, since the various expeditions for robbery and pillage on both sides brought about a state of perpetual war between the inhabitants of Mecca and the Muslims at Medīna, the *jihād* gradually became one of the most important religious duties of Muhammad's adherents.

Cf. Qur'ān, ii. 212–213: 'The strife is prescribed for you; you have, it is true, an antipathy to it, but it is possible that you have an antipathy to that which nevertheless is good for you.'

Those who could not personally take part in the campaign must at least assist in the *jihād* by payments of money according to their means.

Even after Mecca was taken, and the inhabitants had been converted to Islām, the *jihād* against unbelievers remained a religious duty. Though the Prophet at that time did not persecute the heathen for their unbelief alone, the *jihād* against many tribes of the heathen Arabs was necessary because they frequently broke their treaty and otherwise showed signs of their untrustworthy and dangerous disposition. The doctrine that all heathen must be subjected to Islām 'because of their unbelief' first arose in the time of the Great Conquests, after the death of the Prophet, when the Muslim armies succeeded in conquering an extensive territory outside Arabia, and in making tributaries of many unbelievers. At that time the Prophet is said to have declared: 'I am commanded to fight against men until they bear witness that there is no God but Allāh, and that Muhammad is God's messenger; only by pronouncing these words can they make their property and blood secure from me.'

The *jihād* is a duty for every male Muslim who is free, of full age, and not only in the full possession of his intellectual powers, but also physically fit for service and able to obtain the necessary weapons. A son, however, may not go to war without the permission of his parents (if they are Muslims), or a debtor without the permission of his creditors. According to the Shāfi'ites and Ḥanifites, no one is bound to the *jihād* unless he has a mount to cover the distance between his dwelling and the scene of war, and also the necessary sustenance for himself and for those for whose sustenance he is responsible; according to the Mālikites, the duty of taking part in the war is independent of these conditions.

The *jihād* is generally a *farḍ al-kifāyah*, and, when a sufficient number of Muslims take part in the war, the others are permitted to give themselves up to the study of the law and to the practice of the various callings by which the sustenance of believers must be maintained. Only in case of an attack by unbelievers and the invasion of a Muslim land is participation in the *jihād* an individual duty (*farḍ al-'ain*) both for the inhabitants of the threatened districts and for all believers living in the neighbourhood. If the land is conquered by unbelievers, according to the *fatwās* of the later scholars, every Muslim who is in a position to leave the land is then obliged to do so as quickly as possible, at least if he is hindered in the practice of his religious duties.

All lands not belonging to 'the territory of Islām' (*dār al-islām*) must gradually be conquered by the Muslims, and are therefore called 'territory of the war' (*dār al-ḥarb*). The *imām* has to settle when the attack shall be begun. According to theory, one campaign at least must be undertaken against the unbelievers every year; but this became impossible in the later periods, and, according to several Muslim scholars, at present it may be regarded as sufficient if the *imām* keeps the army in good condition and trains it for carrying on the *jihād*.

The many regulations concerning the ways in which Muslims must wage the *jihād* cannot be treated in detail here; they have no practical importance for the later generations. Generally speaking, the war must be carried on as humanely as possible, the helpless must not be killed, and the property of the enemy must not be needlessly destroyed. Before the *imām* invades territory inhabited by unbelievers, he must urge the inhabitants to be converted to Islām. If he neglects this, according to the Shāfi'ites (but not the other *fiqh*-schools), the *diyah* must be paid for every believer who is killed.

(*b*) *Regulations concerning booty.*—The sharing of booty (*ghanīmah*) among those who have a claim to it is carefully regulated in the *fiqh*-books. The regulations on this subject depend on Qur'ān, viii. 42. This verse was revealed when the Muslims had obtained great booty in the battle of Badr, and it was necessary to establish rules for its division. Among the ancient Arabians the head of the tribe usually received a fixed proportion (*e.g.*, a quarter) of the booty, while the rest was divided among the fighting men of the tribe. The head of the tribe received the largest share, but was bound to heavy expenditure in the interests of the tribe. He had, above all, to uphold the honour of the tribe, by hospitality and kindness not only to his relations but to all who had need of help, such as the old, widows, orphans, the poor, and the guests of the tribe. In agreement with this old Arabian custom, Qur'ān, viii. 42, regulated the division of the *ghanīmah* in the following words: 'Know that of that which you make booty a fifth part belongs to Allāh—to His messenger, his family, the orphans, the poor, and travellers—if you believe in Allāh,' etc. Thus the head of the Muslim community, *i.e.* Allāh or His messenger, for the future took the place of the former head of the tribe, and had to use the fifth part of the booty for the same purposes as the Arabian heads of the tribes had formerly been accustomed to use it.

According to Muslim law, ⅘ of the booty of war must be divided among the troops which have taken part in the battle. If a Muslim kills an unbeliever in battle, according to the Shāfi'ites, he has a right to his weapons (*salab*); but, according to the Ḥanifites and Mālikites, only if he had expressly made this condition with the *imām* beforehand. The remaining fifth part (*khums*), according to the Shāfi'itic system, based on the words of Qur'ān, viii. 42, must be divided into five equal parts. One of these parts (namely, that which was formerly designed for the Prophet) must after his

death be used for the common good of the general Muslim community, and the four remaining parts are to be given respectively to (1) the relatives of the Prophet, (2) the orphans, (3) the poor, and (4) travellers, at least so far as they have need of help. According to the Ḥanifites, the share of the Prophet has lapsed since his death, and so also has that of his family, so that the *khums* must be divided into three equal parts and paid out to the three remaining parties. According to the Mālikites, the *imām* has the right to decide according to his own judgment how the *khums* shall be used in the general interest of Muslims.

To the booty belong not only the weapons and mounts which have been captured in battle, but all moveable property of the enemy; on the other hand, the land and all immoveable property in conquered territory is not divided as booty (see below, § 18 (*a*)). Prisoners are also part of the booty. If unbelievers are converted to Islām before they fall into the hands of the conquerors, they and their children must be regarded by the Muslims as fellow-believers, and they also keep their property. In the opposite case they become slaves (the men as well as the women and children) and are divided among the persons who have a right to a share in the booty. The *imām* is entitled to put prisoners of war to death; according to the Shāfi'ites and Mālikites, he may spare them and set them free, either in exchange for ransom or for Muslim prisoners of war, or even without compensation.

18. Rights and duties of unbelievers in Muslim lands.—(*a*) *Tribute.*—The population of the lands conquered by Muslims after Muhammad's death originally retained their old faith. They were allowed to remain in their old dwellings, both in the towns and in the country; but they had to pay tribute to their conquerors. The tribute consisted chiefly of payment of part of the harvest. Villages and sometimes whole districts were commanded by the magistrates to deliver definite quantities of crops, which were afterwards converted into money by the Muslim officials. The forms of government existing in the ancient times in the different districts were preserved in many respects.[1]

The tribute is called both *jizyah* and *kharāj*; both names have originally the same meaning. The word *jizyah* is taken from Qur'ān, ix. 29: 'Strive against the "people of the Book" who do not believe in Allāh and the Last Day, and do not regard as forbidden what Allāh and His messenger forbid, until they pay you *jizyah* in abasement.' Muslim writers are accustomed to explain *jizyah* as that which is paid 'as compensation' by the 'people of the Book' because the Muslims allow them to keep both their faith and their life and give them protection. *Kharāj*, on the other hand, is borrowed from the language of the conquered, especially in Irāq, where the word is used in the general sense of taxation.[2] Later on, however, a difference was made between the two words, *kharāj* being taken to mean—probably because it was originally understood in the sense of produce of the field—taxation connected with the occupation of land, in distinction from *jizyah*, which came to be used exclusively in the sense of poll-tax.

The land in the conquered territories was declared by Muhammad's successors to be a national domain, in agreement with the opinions of the companions of the Prophet. They would not divide the land among the troops, but kept it as a permanent source of income for all future generations of Muslims. The conquered population were allowed to cultivate the land as they had formerly done, but they had to pay part of the produce as tribute (*kharāj*).

The Prophet himself had acted in some respects in the same way at the conquest of certain districts inhabited by Jews to the north of Medīna. When these places fell into the hands of Muslims without much fighting, the Prophet commanded that the captured land should not be divided among the Muslim troops, but, like the *khums* of the *ghanīmah*, should be left to his personal disposition. See Qur'ān, lix. 7: 'What God allows to fall to His messenger as *fai'*[1] belongs to God—to His messenger, his family, the orphans, the poor, and travellers; accept what God's messenger gives you, but refrain from that which he forbids you; fear God, for His punishments are fearful.' Apparently the intention was that property which could not be regarded as booty should be managed by the Prophet, in order that the income might be used in the same way as the fifth part of the booty.

The land which was declared to belong to the State dominion in conquered countries was also called *fai'*, and to secure the use of the income of the *fai'*-land to the Muslim community it was arranged that *kharāj* should be for ever attached to the possession of that land. Even if the population which cultivated the land went over to Islām, they must continue to pay the *kharāj*. This rule has proved unworkable in practice, since the payment of the *kharāj* was regarded as an act of subjection to which only unbelievers could submit.[2] The new converts rejected this obligation, in spite of all measures taken by the magistrate. After their conversion they refused to pay more than the tithe which the Arabian Muslims were also obliged to pay from the product of their harvests.

In the second century after the *Hijrah* several separate works were written by Muslim scholars about the *kharāj*. Among these is the well-known book written by Abū Yūsuf at the instance of the 'Abbāsid Khalīf Al-Manṣūr.[3] In these works it is accurately established which lands belonged to the *fai'*-territory and were thus the State's dominion, and how much their inhabitants must pay as tribute. But, after the whole population had gradually accepted the faith of the Arabian conquerors, and the sharp distinction between them and the latter was becoming less and less marked, the payment of the *kharāj* passed completely out of use. Both the Arabs who had settled on the State domain and the new converts refused to submit to such a tribute, and in the end the land was no longer regarded as *fai'*-land.

(*b*) *Poll-tax, and other obligations of the dhimmīs.*—In the later law-books there is usually no longer an exhaustive discussion of the *kharāj*, but only of the *jizyah*. By this was understood in later times, as has already been noted, a fixed sum of money which was to be paid per head by unbelievers as tribute (on the ground of Qur'ān, ix. 29). According to the Shāfi'ites, only the *ahl al-kitāb*, *i.e.* possessors of a revelation (esp. Christians and Jews who already confessed their faith before Muhammad had preached Islām [see above, p. 866[b]]), are allowed to submit to the Muslims on condition that they shall pay the *jizyah*. Other believers must, ac-

[1] See C. H. Becker, *Papyri Schott-Reinhardt*, i. (Heidelberg, 1906) 37 ff.

[2] Cf. T. Nöldeke, *Gesch. der Perser und Araber zur Zeit der Sasaniden*, Leyden, 1879, p. 241; M. von Berchem, *La Propriété territoriale et l'impôt foncier*, Geneva, 1886, p. 20; C. H. Becker, p. 39. Another name, originally a Byzantine term, was *ṭasq* (Gr. τάξις); cf. Nöldeke, *ZA* xxiii. [1909–10] 145–148.

[1] Lit. 'what God *makes return* (Arab. *afā'a*) to His messenger. All the possessions of the unbelievers must 'return' to the Muslims. From this peculiar expression of Qur'an, lix. 7, the name *fai'* originated. By this name Muslim law understands all goods returning to the Muslims, without being booty in the proper sense of the word. The tribute paid by unbelievers also belongs to the *fai'*.

[2] Hence the earlier Muslim *faqīhs* used to forbid Arab conquerors to own land, at least in countries in which the land belonged to the State domain (*fai'*). There was no objection, however, to Arabs possessing land in countries in which the land did not belong to the *fai'*, and where, therefore, no *kharāj* was to be paid.

[3] On the Arabic books about the *kharāj* see I. Goldziher, *Deutsche Lit.-Zeitung*, xvii. [1896] 1514 f.

cording to them, be fought against until they have accepted Islām. According to the other *fiqh*-schools, the regulations concerning the *jizyah* are applicable also to all other unbelievers, and the latter may be permitted to submit to the Muslims and at the same time to retain their faith. According to the Ḥanifites, the heathen Arabians were the only exception to this rule; and, according to the Mālikites, the heathen Quraishites, so that only these had to choose between death and conversion to Islām.

The submission of unbelievers must take the form of a statement by which the rights and duties of both parties are accurately described. The unbelievers must bind themselves to pay the *jizyah*, and to fulfil the other duties that Islām enjoins on them. The Muslims in exchange for this must bind themselves for the future not only to leave them in peace, but also to protect them. The subjugated unbelievers who are thus under the protection (*dhimmah, i.e.* responsibility) of the Muslims are therefore called *dhimmīs* in the law-books.

Only those *dhimmīs* who are of full age, free, male, and in full possession of their intellectual faculties are obliged to pay *jizyah*. According to the Shāfi'ites, the amount of this payment depends on the agreement made at the drawing-up of the act of submission; the *imām* or his deputy must demand at least one *dīnār* per head, but, if it is possible, preferably more; according to the Mālikites, the *imām* has the right to act in the interests of the Muslims according to his own judgment; according to the Ḥanifites, he has no choice, but must demand from every poor *dhimmī* one *dīnār*, from each who is well-to-do two *dīnārs*, and from each who is rich four *dīnārs*. According to the conviction of Muslims, however, at the 'end of the days' Jesus will once more come back to the earth and show to Christians as well as to Jews that Islām is the only true religion. In the ideal period, which will begin at His coming, all unbelievers must be converted, and the *jizyah* can no longer be accepted from any one.

Like other taxes which unbelievers have to pay (*e.g.*, the customs which they must pay for their goods if they trade in Muslim lands), the *jizyah* belongs to the *fai'*. As to the question how the *imām* must use the money belonging to the *fai'* there is a difference of opinion among the *fiqh*-schools.

According to the Shāfi'ites, the rules concerning the division of the *khums* of the booty (see above, p. 881 f.) are also applicable to the *fai'*; thus ⅕ of the *fai'* must be divided between the same five categories of persons who have also a right to the *khums* of the booty, while the remaining ⅘ are destined for the general interests of Muslims. According to the Ḥanifites and Mālikites, the rules concerning the distribution of the booty are not applicable to the *fai'*, but the whole *fai'* must be used in the interests of all Muslims (*e.g.*, for the payment of judges, troops, and officials, for the building of forts, roads, bridges, mosques, etc.).

Unbelievers in Muslim lands not only have to pay tribute, but are also subjected to other regulations which involve indignities; *e.g.*, they have to fasten a coloured piece of cloth (*ghiyār*) on their clothes, and wear a special kind of girdle (*zunnār*), in order that they may readily be distinguishable from Muslims. Christians must preferably wear a blue, Jews a yellow *ghiyār*. They may not ride on horseback, their houses may not be as high as, or higher than, those of their Muhammadan neighbours, and they may carry no weapons. They must not give offence to Muslims—*e.g.*, by ringing their church-bells, or by openly slighting Islām, the Prophet, or the Qur'ān, by drinking wine, or eating pork, etc. On the other hand, they may practise their own religious observances. In the towns in which at the conquest of the land there were no churches or synagogues, they may not be built later; Christians and Jews may restore these buildings only if they are in danger of ruin; according to Abū Ḥanīfah, even this was permitted only in those lands which had not been conquered but had voluntarily submitted at the approach of the Muslim army. As a matter of fact, however, in the first centuries of Islām the Muslims conceded to Christians much greater freedom as to the building of churches (cf. I. Goldziher, in *ZDMG* xxxviii. [1884] 674). Otherwise the *dhimmīs* are in many respects on an equality with their Muslim fellow-citizens: they may acquire property in the lands of Islām and carry on trade; this last is under certain conditions permitted even to unbelievers who have not submitted.

LITERATURE.—Besides the works on special subjects of Muslim law cited above and various artt. in *EI* and *DI*, the following general works must be mentioned here: Ash-Sha'rānī, *Balance de la loi musulmane*, Fr. tr. by M. A. Perron, Algiers, 1898; Joanny-Pharaon and T. Dulau, *Droit musulman*, Paris, 1840.

ḤANIFITE LAW.—N. B. E. Baillie, *A Digest of Moohummudan Law*, i. (on the subjects to which it is usually applied by British Courts of Justice in India), London, 1865, ²1875; W. H. Macnaghten, *Principles and Precedents of Hindu and Mohammadan Law*, Calcutta, 1825; C. Hamilton, *The Hedayá, or Guide; a Commentary on the Mussulman Laws*, London, 1791, 2nd ed., with preface by S. Grove Grady, do. 1870; J. M. d'Ohsson, *Tableau général de l'empire othoman*, Paris, 1787–1820.

SHĀFI'ITE LAW.—E. Sachau, *Muhammedanisches Recht nach schafiitischer Lehre*, Berlin, 1897; Th. W. Juynboll, *Handbuch des islāmischen Gesetzes*, Leyden and Leipzig, 1910; L. W. Querry, *Droit musulman: Recueil de lois concernant les musulmans schyites*, Paris, 1871–72; N. von Tornauw, *Das moslemische Recht aus den Quellen dargestellt*, Leipzig, 1855. TH. W. JUYNBOLL.

LAW (Roman).—**1. Fas and ius.**—Law, according to Roman ideas, had a double foundation, being based partly upon divine revelation and partly upon human ordinance. Here we have the root of the distinction between *fas* and *ius*, and this again corresponds to the division of law into *ius divinum* and *ius humanum*:

'Fas et iura sinunt id est divina humanaque iura permittunt; nam ad religionem fas, ad homines iura pertinent' (Serv. *Georg.* i. 269; the explanatory clause, however, fails to hit the mark, as the distinctive character of the *fas* lay, not in its relation to religious things—there were also secular laws 'de religione'—but in its divine origin [cf. Isid. *Orig.* v. ii. 2, 'fas lex divina est, ius lex humana']); Cic. *de Harusp. Resp.* 34, 'oratores contra ius fasque interfectos . . . ius legatorum cum hominum praesidio munitum sit, tum etiam divino iure esse vallatum'; Livy, xxvii. xvii. 13, 'ubi ius ac fas crederent coli . . . '; *ib.* 16, 'ubi nec divini quicquam nec humani sanctum esset.'

On the other hand, the later threefold division of the law into *ius sacrum*, *ius publicum*, and *ius privatum*[1]—a division unknown in professional jurisprudence[2]—does not rest upon diversity of origin, but is based upon the division of affairs into *res sacræ*, *res publicæ*, and *res privatæ*, of which groups the *res sacræ* (and *res religiosæ*) come under *ius divinum*, and the other two under *ius humanum*.[3] The fact that the term *fas* is neuter and indeclinable shows that the corresponding concept was a pure abstraction; the attempts to personify it were of relatively late date, and never quite

[2] Mommsen, *Staatsrecht*³, ii. 52.
[3] Gaius, *Inst.* ii. 2, 'Summa itaque rerum divisio in duos articulos diducitur; nam aliae sunt divini iuris, aliae humani. Divini iuris sunt veluti res sacrae et religiosae . . . '; 10, 'hae autem quae humani iuris sunt, aut publicae sunt aut privatae' (cf. Mommsen, *loc. cit.*).

succeeded, for the prayer which Livy (I. xxxii. 6) puts into the mouth of the *Pater patratus* of the *Fetiales* at the *Clarigatio*, and which begins with the invocation, 'audi Juppiter, audite Fines, audiat Fas' (cf. VIII. v. 8, 'audite Ius Fasque'), shows traces of extensive adulteration by annalistic tradition, while the deity whom later poets designate Fas (Seneca, *Herc. Fur.* 658; Valer. Flacc. i. 796) is in reality the Greek Themis.[1] This view of *fas* never found admission into the cultus, while, on the other hand, the divine personification of *ius*—*i.e.* Iustitia—was in the Augustan Age not merely represented by the poets as the counterpart of the Greek Dike,[2] but even honoured by the erection of a special temple.[3]

To the Romans *fas* was by no means simply an eternal and universal law, a justice equally valid for all peoples and for all times, natural and therefore traceable to a divine source—a *ius naturæ* or *κατὰ φύσιν δίκαιον*—although in the later period and under the influence of Greek philosophy it was certainly attenuated to an indefinite abstraction of this kind,[4] for, in the sense of a natural or customary law,[5] even without written formulation, *fas* was conjoined with the *mos maiorum*,[6] or with *fides*,[7] and the classical jurists sometimes criticized current law by an appeal to *fas* as of higher authority;[8] it was from this point of view, in fact, that the phrase 'contra fas' was often simply a rather severe characterization of the illegality of an action,[9] and the frequent expression 'fas est' came to signify nothing more than 'par est,' 'licet,' 'fieri potest.'[10] Originally, however, the scope of the *fas* did not extend beyond the Roman people. Nor had the *fas* existed from eternity: it was believed that the founders of the Roman State had made a compact with certain deities, who thereupon became the national gods, and, while this compact secured for the Roman people the protection and favour of these gods, and therefore also all good fortune and prosperity, it likewise required from them the strict fulfilment of certain clearly defined duties and commandments.[11]

These divine laws were all included under the one term *fas*, which, accordingly, was not confined to the demands of natural justice, as, *e.g.*, those referring to the relation of children to parents, etc., but comprehended also the extensive and intricate ritual law in its entirety. We have the clearest evidence for this in the earliest extant document which makes mention of *fas* and its opposite *nefas*, viz. the Roman Calendar of festivals. That the abbreviations Q·R·C·F and Q·ST·D·F found there are to read as 'quando rex comitiavit fas' and 'quando stercus delatum fas' respectively is proved on adequate grounds; moreover, the symbols F and N attached to the majority of the days in the calendar meant originally, not *fastus* and *nefastus*, as was supposed at a later period, but *fas* and *nefas*, as is shown by the symbol N·F·P, subsequently contracted to ℕP, and signifying 'nefas feriae publicae.'[1] In these phrases *fas* can be construed grammatically only as the predicative noun of a clause which in full would run: 'hoc die lege agere fas est';[2] 'fas est' signifies 'is in accordance with *fas*,' just as 'ius est' was employed in an analogous sense.[3] Thus the distinctively Roman practice of dividing the days of the year into the two classes of 'holy days' and 'working days,' belonging respectively to the gods and to men, comes under the *fas*.[4] As bearing a like sense, and with express reference to the ordinances of sacred law, the word *fas* is frequently used not only in the technical phraseology of sacred things,[5] but also in the literature generally, as, *e.g.*, with reference to dedication (Cic. *de Domo sua*, 138), the legal position of 'loca sacra' (Paul. *Dig.* XXXIX. iii. 17. 3), questions of marriage law (Ulpian, *Dig.* III. ii. 13. 4), and adoption (Cic. *de Domo sua*, 35); similarly, in Cic. *Verr.* v. 34 ('contra fas, contra auspicia, contra omnes divinas et humanas religiones') and Marcian, *Dig.* XLVIII. xviii. 5 ('incestum, quia cognatam violavit contra fas'), the phrase 'contra fas' still bears the pregnant sense of a violation of divine law, and passages of like tenor are of frequent occurrence down to the later literary period.

It is a widely prevalent view that the *ius* was disengaged from the *fas* in relatively late times, and was indeed developed from it, and that in a broad sense the whole public and private law of the Romans rested upon the basis of the religious law.[6] This theory, however, requires considerable qualification, as has recently been most efficiently shown by L. Mitteis (*op. cit.* p. 22 f.). Mitteis (p. 26) rightly emphasizes the circumstance that there is hardly a single significant trace of the influence of the *fas* in the law of property as relating to living persons, while the occasional occurrence of *fas* and *ius* in family law and the law of inheritance is explained by the fact that marriage was regarded as a 'divini humanique iuris communicatio' (Modestinus, *Dig.* XXIII. ii. 1), and all the questions relating to the *sacra* of family and clan came as decisively within the province of the *fas* as questions relating purely to property within that of the *ius*. In criminal jurisprudence a religious penal law of earlier origin maintained a place beside a later secular one, and the provisions of each are clearly distinguished by the form of the punishment imposed (*sanctio*); thus, while the secular law relegates the execution of the penalty to the authorities, and attaches definite penalties in person or property to particular crimes, the religious law knows nothing whatever of penalties inflicted by human means, but either declares that the trespass against a sacred ordinance can be made good by the proper expiatory offerings (*piacula*) or else, by pro-

[9] *e.g. CIL* viii. 10570, ii. 3, '(praevaricationem) . . . contra fas atq[ue] in perniciem rationum tuarum sine modo exercuit.'

[10] Cf. R. Hirzel, *Themis, Dike und Verwandtes*, Leipzig, 1907, p. 51.

[11] As is distinctly expressed in Cic. *pro Sest.* 91, 'tum res ad communem utilitatem, quas publicas appellamus, tum conventicula hominum, quae postea civitates nominatae sunt, tum domicilia coniuncta, quas urbes dicimus, invento et divino iure et humano, moenibus saepserunt'; similarly it is said, *e.g.* in *CIL* vi. 1302, 'is preimus ius fetiale paravit,' although the Fetial Law was undoubtedly regarded as a part of the *fas*.

[1] Cf. W. Soltau, in A. Fleckeisen's *Neue Jahrbücher für Philologie*, cxxxvii. [1888] 836; Wissowa, *op. cit.* p. 438.

[2] The present writer is at a loss to understand the view of W. W. Fowler (*The Religious Experience of the Roman People*, p. 487 f.), viz. that *fas* is here an adverb.

[3] *e.g.* Plaut. *Persa*, 105, 'pernam quidem ius est adponi frigidam postridie.'

[4] Hence Verg. *Georg.* i. 268 f., 'quippe etiam festis quaedam exercere diebus fas et iura sinunt.'

[5] *e.g. CIL* vi. 576, 'extra hoc limen aliquid de sacro Silvani efferre fas non est'; Fest. p. 315. 'neque fas est eum immolari.'

[6] Of recent writers cf. especially E. Lambert, *La Fonction du droit civil comparé*, i. (Paris, 1903) 632 ff.

nouncing the formula 'sacer esto,' devotes the offender to the deity for such punishment as the latter may decree. The *leges sacratæ* with which the inviolability of the plebeian magistracy was guaranteed at its institution were simply laws which pronounced the sentence (*sanctio*) 'sacer esto,'[1] just as, in fact, the penalty imposed upon one who violated the privileges of the *plebs* was, according to the literary tradition, 'ut . . . eius caput Iovi sacrum esset, familia ad ædem Cereris, Liberi, Liberaeque venum iret.'[2] What we have here, accordingly, is not a secular ordinance in the forms of public law, but a contract under the protection of the *fas*. The person declared to be *sacer* was a proscribed outlaw, and any one had the right to execute the divine sentence under which he lay, and might kill him with impunity.[3] The same consequences were incurred by one who committed an act of violence upon a tribune of the people,[4] though at a later period the State itself saw to the due infliction of the penalty by secular law, viz. by bringing the crime before the magistrates in the form of a process of perduellion.[5] A similar reinforcement of the sentence 'sacer esto' by a secular penalty is authorized also by the Law of the XII Tables as given by Pliny, *HN* xviii. 12:

'Frugem . . . aratro quaesitam noctu pavisse ac secuisse puberi XII tabulis capital erat suspensumque Cereri necari iubebant, . . . impubem praetoris arbitratu verberari noxiamve duplionemve decerni,'

where the reference to Ceres indicates that the original formula of the *sanctio* was 'Cereri sacer esto,' and that the penalty of crucifixion (or, in the case of those under age, scourging) was a later addition. It is possible that in other cases as well the sanction of secular law was added to or substituted for that of sacred law, and, as the former was naturally more certain in its operation than the latter, *fas* gradually lost its practical significance, and came to be regarded more as an ideal ratification and reinforcement of a secular law that was in itself perfectly competent to administer the penalty. Only so can we explain the circumstance that the often[6] purely conventional phrase, 'ius et fas' or 'ius fasque,'[7] is found, almost without exception, with its terms in that order,[8] even in passages where the reverse order might seem the more natural, as, *e.g.*, Livy, XXXIII. xxxiii. 7, 'ius fas lex,' and Cic. *de Harusp. Resp.* 43, 'deos hominesque, pudorem, pudicitiam, senatus auctoritatem, ius, fas, leges, iudicia violavit' (where 'deos hominesque' would lead us to expect 'fas iusque'). The same sequence occurs also in the technical language of religion, as in the Lex aræ Narbonensis, *CIL* xii. 4333, ii. 14, 'Si quis tergere ornare reficere volet, quod beneficii causa fiat, ius fasque esto,' in accordance with which the corresponding passage in the law of the temple at Furfo (*CIL* ix. 3513. 7) should probably be restored thus: 'utei tangere sarcire tegere . . . [ius] fasque esto.' This also explains why the *fas* should be specially appealed to in matters which the arm of the civil law did not reach, as, *e.g.*, affairs of international law, which regulated the relations of war and peace among the nations; thus Tacitus speaks of the 'fas gentium'[1] and the 'fas armorum et ius hostium.'[2]

[1] Hence the term 'sacrosanctus,' the implications of which A. Rosenberg (*Hermes*, xlviii. [1913] 359 ff.), whose arguments so frequently carry conviction, has failed to grasp with sufficient clearness.

[3] Fest. p. 318; Macr. *Sat.* III. vii. 5; Dion. Hal. II. x. 3; cf. also W. W. Fowler, *Journal of Roman Studies*, i. [1911] 57 ff.

[4] Cic. *pro Tullio*, 47, 'legem antiquam de legibus sacratis, quae iubent impune occidi eum, qui tribunum plebis pulsaverit'; cf. Livy, III. lvi. 5; Dion. Hal. VI. lxxxix. 3.

[5] Mommsen, *Röm. Strafrecht*, Leipzig, 1899, p. 581.

[6] First in Plautus, *Cist.* 20; Terence, *Hecyra*, 387.

[7] Cf. R. Hirzel, *Themis, Dike und Verwandtes*, p. 161.

[8] The sequence in Verg. *Georg.* i. 269 ('fas et iura sinunt') and Amm. Marc. XIV. i. 5 ('velut fas iusque perpensum') is due no doubt to the writers' conscious purpose; in Livy, VII. xxxi. 3 ('sicut fas iusque est') E. Wölfflin, in view of his author's regular usage, has substituted 'ius fasque' for the traditional reading.

2. **Codification.**—It is only natural to expect that there could be no complete or public codification of the ordinances of the *ius divinum*, as, although the latter was traced back to a definite compact with the gods, it was in reality the result of a gradual development. The duty of preserving this sacred law was committed to the State priests, who had, as required, to give their professional opinions for the enlightenment and instruction both of the authorities and of private individuals. There was, however—apart from the penal authority of the Pontifex Maximus in relation to his subordinate priests—no official administration of sacred law, and no official infliction of its penalties. In general, offences against the *fas* were regarded as falling under the maxim 'deorum iniuriae dis curae' (Tac. *Ann.* i. 73), and the *piacula* assigned to particular ritual misdeeds were not penalties, but were designed simply to show the delinquent how he might propitiate the offended deity. A person who did not avail himself of this opportunity, and who refused to offer the required *piaculum*, or one who violated the *fas* in so gross a fashion that expiation was deemed impossible, was *impius*, was excluded from the *pax deorum*, even if neither the sacred nor the secular authorities took proceedings against him;[3] the only thing that could affect such an offender, indeed, was the reprimand of the Censor. Those who violated the ordinance regarding holy days, or did not fulfil a vow that they had made, or broke an oath made by appealing to the gods, did not thereby become liable to human retribution at all, whether of priests or of magistrates; and even with regard to those provisions of the sacred law which, by means of the formula 'sacer esto,' committed the defender to the divine retribution, the intervention of the State in the infliction of punishment was, as noted above, a later development. Likewise, in cases which did not relate to penal offences at all, but involved civil matters falling within the scope of the *fas*, as, *e.g.*, the mode and extent of the required fulfilment of a vow, the inheritance of the *sacra familiaria*, etc., the priests did not deliver a judgment that could be enforced by law, but merely gave an opinion regarding the legal position, though it is true that this opinion was almost always accepted by the parties concerned.

Corresponding to the respective spheres of the several colleges of priests, the codification of the *ius divinum* is found in three distinct forms, viz. the *ius pontificium*, the *ius augurale*, and the *ius fetiale*. The *ius fetiale* contained the articles relating to matters of international law which could not be consummated without religious ceremonies, and also the form of such ritual; the vital element in the *ius augurale* was the widely ramified and imposing doctrine of the *auspicia*; the *ius pontificium* embraced not only the ritual ordinances designed for the guidance of the priests, *i.e.* the ceremonial law in the proper sense, but also all the essential principles of the legal and other relations between the Roman citizen or the Roman nation and the State gods; and in a State whose citizens, alike as individuals and as a people, attached the utmost significance to the maintenance of the *pax deum*, and as 'religiosissimi mortales' (Sallust, *Cat.* xii. 3) applied themselves to their religious

concerns with the most painful conscientiousness, this pontifical law bore upon every phase of private and public life, so that the Pontifex Maximus was actually designated as 'iudex atque arbiter rerum divinarum humanarumque' (Festus, p. 185). This certainly does not in the slightest alter the fact that the jurisdiction of the Pontifices, as of all other priests, was wholly confined to the province of the *ius divinum*;[1] nevertheless those invested with the priestly office, just because they expounded and administered the *fas*, had, on the one hand, the opportunity of acquiring great experience in the application and interpretation of law, and thus also great acuteness in juridical thinking and reasoning; while, on the other hand, in view of the numerous points at which the *fas* came into touch with questions of secular life and secular law, they required to have a thorough knowledge of the *ius civile* also,[2] so that the Pontifices were the earliest jurists of Rome, and in virtue of their *responsa* exercised no small influence upon the development of the civil law as well. It should be noted, however, that these *responsa*, so far as they transcended the proper sphere of the *ius divinum*, were not official deliverances, and thus were never given by the *collegium* as a whole, but were pronounced by individual Pontifices, who in such things had no higher authority than a private person learned in the law. From the circumstance that the body of consulting lawyers was largely recruited from among the Pontifices the ancient reading of the history, to which modern scholars have attached too much importance, wrongly assumed that the Pontifical College as such was officially concerned in the preservation and application of the civil law, and asserted that the form of words necessary to the institution of a suit (the *legis actiones*) was officially communicated to the parties by a member of the Pontifical College annually appointed for the purpose,[3] and even that the knowledge of the civil law as a whole was confined to the Pontifices.[4] As a matter of fact, the official function of the Pontifical College was restricted to the administration of the sacred law, and a similar limitation must be assigned to the juristic writings *de iure pontificio*, which drew their materials from the pontifical archives, the *libri* (or *commentarii*) *pontificum*, and of which, with an older work by Q. Fabius Pictor, the comprehensive treatises of M. Antistius Labeo and C. Ateius Capito may be singled out for special mention.

An important step in the publication of the sacred law was taken when the register of court-days and holy days, the *Fasti*, was made accessible to the public—an event brought about, as Mommsen[5] rightly infers from Cic. *ad Att.* VI. i. 8, by the promulgation of the Code of the XII Tables; while the well-known disclosure of Cn. Flavius, the protégé of the revolutionary Appius Claudius, Censor in 312 B.C., marks the earliest issue of the calendar in a codified form. Another extensive collection of articles from the sacred law, the publication of which cannot be precisely dated, was current among the jurists of the later period under the title of *Ius Papirianum*,[1] and was annotated by Granius Flaccus, a contemporary of Cæsar.[2] The meaning of the name 'Papirianum' had been forgotten by the ancients themselves, but was believed to go back to an editor called Papirius (the *prænomen* is variously given), said to have been the first Pontifex Maximus after the expulsion of the kings,[3] while a rather unconvincing modern theory[4] would assign the compilation to Sextus Papirius, a jurist of Cicero's time, who is mentioned as a pupil of Q. Mucius Scævola.[5] While the collection as a whole may be of fairly late date,[6] there can be no doubt that its individual statutes go back to a very remote period and were drawn from the writings of the Pontifices. They are called *Leges Regiæ*,[7] and were arranged in the order of the kings to whom—somewhat arbitrarily, it is clear—they were ascribed.[8] As regards their matter, they lie wholly within the range of the *ius divinum*, and, in cases where they prohibit something, the penalties imposed are exclusively of a religious kind—the offering of a *piaculum* for less serious offences,[9] and, for more serious, condemnation by the formula 'sacer esto.'[10] Moreover, many of the provisions bear directly upon the ceremonial of sacrifice,[11] and of other proceedings regulated by religious law, as, *e.g.*, the interment of the dead,[12] so that we can quite easily understand the reference of Servius (*Æn.* xii. 836) to the 'lex Papiria *de ritu sacrorum*' (cf. also Macr. *Sat.* III. xi. 5). In all cases where the code seems to encroach upon the sphere of secular law, it deals with matters which originally were regulated by the *fas* alone, but were subsequently brought within the scope of the ordinary criminal law, as appears to have been the case even with *paricidium*.[13] The ordinances of the *fas* formulated in the *Leges Regiæ* bore with special frequency upon matters in which private law was palpably defective,[14] as, *e.g.*, the unintentional slaying of a human being,[15] and many questions of family law: thus we find ordinances concerning the punishment of children who ill-treat their parents,[16] the exposure of children,[17] the repudiation and selling of wives,[18] the period of a widow's mourning and her re-marriage,[19] etc.; the protection of clients[20] and landmarks[21] also fell within the scope of the sacred law. When the extreme penalty of 'sacer esto' is imposed, the deities to whom the criminal is delivered are always those of the earliest Roman cultus, and above all Juppiter,[22] Vediovis,[23] and the *divi parentum* or

1 Cic. *de Leg.* ii. 47, 'quid enim ad pontificem de iure parietum et aquarum aut ullo omnino nisi eo quod cum religione coniunctum est?'

2 *Ib.* 'pontificem bonum neminem esse nisi qui ius civile bene nosset.'

3 Pompon. *Dig.* I. ii. 2. 6, 'omnium tamen harum interpretandi scientia et actiones apud collegium pontificum erant, ex quibus constituebatur quis quoquo anno praeesset privatis'—a statement which Mommsen (*Staatsrecht*[3], ii. 46) justly characterizes as confused and incredible, while R. Maschke (in *Festschrift zum 60-jähr. Doktorjubil. L. Friedländers*, Leipzig, 1895, p. 322 ff.) makes it the basis of far-reaching inferences.

4 Livy, IX. xlvi. 5, 'civile ius repositum in penetralibus pontificum evulgavit,' and, following this statement, Valer. Max. II. v. 2, 'ius civile per multa saecula inter sacra caerimoniasque deorum immortalium abditum solisque pontificibus notum Cn. Flavius . . . vulgavit.'

ancestral spirits.[1] The Δημήτηρ to whom one half of the husband's property was assigned when he unjustly repudiated his wife[2] must undoubtedly have been the ancient Roman goddess Tellus, of whom we read as the goddess of marriage;[3] and to her also belonged the oblation of a cow in calf ('forda bos'), which, according to Plut. *Numa*, 12, was demanded from a widow who married again during her period of mourning. The Ceres to whom the spoiler of crops was delivered was without doubt the ancient Roman goddess of vegetation,[4] and not the Greek Demeter; it was the latter, however, to whom, as Ceres Liber and Ceres Libera, the statutes of the *Leges Sacratæ* (a reproduction of the *Leges Regiæ*) assigned the property of one who infringed the privileges of the *plebs*.[5]

As the sentence of 'sacer esto' was attached only to the statutes derived from the sphere of the ancient *fas*, we must not, with Mommsen (*Strafrecht*, p. 900 ff.), regard the formula as equivalent to the capital penalty of the secular law; in reality it simply handed the offender over to divine retribution, nor did it ever signify more than this except in so far as the State supplemented the religious penalty by a civil one. The youth who beat his father, and thereby became 'divis parentum sacer' was not called to account by the civil magistrates, though in legislating for certain other offences the State fixed definite penalties and so undertook to enforce them. As we saw above (p. 885[a]), the peculiar form of the penalty imposed by the XII Tables upon the injurer of crops ('suspensum Cereri necari' [Pliny, *HN* xviii. 12]) clearly implies that the secular penalty of crucifixion was an addition to the older religious penalty of 'Cereri sacer esto.' The like holds good with regard to another offence: if a patron wilfully injured his client, he was, by a *lex regia* ascribed to Romulus, delivered, as *sacer*, to Vediovis (Dion. Hal. II. x. 3), and the XII Tables formulated this ordinance as 'patronus si clienti fraudem fecerit, sacer esto' (Serv. *Æn.* vi. 609); the fact that the deity's name is omitted in the latter formulation shows that the phrase 'sacer esto' had lost its original meaning, for it was necessary that the sentence of *sacratio* should always specify a particular deity.[6] That the whole procedure of *consecratio capitis et bonorum*[7] lay outside the sphere of secular justice, and belonged exclusively to that of religious law,[8] to which all formal judicial procedure was alien, appears from the fact that the *consecratio bonorum*, which was still inflicted in historical times, and manifestly on the grounds of the *Leges Sacratæ*, by the tribunes of the people upon those who resisted them,[9] was carried out in purely religious forms, and neither required a forensic process nor permitted of an appeal.

As the *ius divinum* was believed to have come into being at the foundation of the city, it could of course be developed indirectly by the expositions of the priests, but could not be added to by the creation of fresh laws. From the institution of the Republic, accordingly, there was no specific sacred legislation, and the *ius sacrum* was a division of the *ius publicum*,[10] as finds clear expression in the formula with which the magistrate rejected private claims to property, 'aut sacrum aut publicum esse,'[1] *i.e.* 'the property of the gods and that of the State are one in relation to private property.' In the so-called *Lex de imperio Vespasiani*[2] the two great divisions of *divinæ humanæ res* and *publicæ privatæque res* (the *publicæ res* embracing also the *sacræ res*) are not conjoined in such a way as to imply that the latter pair is a subdivision of the *humanæ res*; and Ulpian's definition of (secular) jurisprudence as 'divinarum atque humanarum rerum notitia, iusti atque iniusti scientia' (*Dig.* I. i. 10. 2) no longer recognizes any distinction between sacred and secular law.

G. WISSOWA.

LAW (Teutonic and Slavic).—1. Terms denoting 'law.'—As the conceptions of justice and law are everywhere of higher antiquity than the knowledge and use of writing, we may assume that among the Teutons and the Slavs there were at one time only ἄγραφοι νόμοι, 'unwritten laws.' The nature of such unwritten laws can be discovered only by an analysis of the general terms used to designate them. Among the Slavs one of the most typical terms for the idea of law is *zakonŭ*, a word found in all the Slavic tongues, and the word *pokonŭ* was employed in the same sense. As both of these words are etymologically akin to the O. Slav. *za-čina*, Czech *po-čnu*, 'I begin,' they must originally have meant something like 'beginning,' *i.e.* that which existed or was in force from the first. This is the fundamental sense also of the O. Russ. *pošlina*, 'law,' lit. 'the past,' and *starina*, 'law,' lit. 'antiquity'; cf. such phrases as *po staroj pošline Novgorodčkoj*, 'by ancient Novgorod law,' *dirzati vŭ starine*, 'to observe the laws,' *na vsej starine*, 'in retention of all previous law.' An essentially similar idea lies at the root of the term for 'law' common to the West Teutonic dialects, O.H.G. *êwa*, O.S. *êo*, A.S. *æ*, *æw*. It is true that some philologists regard this Teutonic word as cognate with the Lat. *æquum*, so that it would mean originally 'fairness,' 'equity,' and this is certainly possible by phonetic laws (O.H.G. *êwa* from * *aihva* = Lat. *æquum* from * *aiquo*); but the Slavic data just noted seem to make it much more probable that O.H.G. *êwa* is related to Lat. *ævum*, 'eternity,' Gr. *αἰών*, 'long space of time,' *αἰεί*, 'ever,' and thus, like the Slavic *zakonŭ*, *pošlina*, *starina*, will mean 'the law which has been in force from eternity, from the beginning, from of old.'

A second concept connoting 'law' and 'equity,' and common to both Teutons and Slavs—though found also in other branches of the Indogermanic stock—is that of 'straightness' as contrasted with 'crookedness.' Thus Goth. *raíhts*, O. Norse *réttr*, A.S. *riht*, O. Sax. *reht* (cf. also O. Irish *recht*, 'law,' 'justice'), are philologically equivalent to Lat. *rectus*, 'straight,' 'right,' Avest. *rāšta*, 'straight,' 'right,' 'correct'; and similarly the Slav. *pravĭda*, *pravo*, 'law,' 'justice,' is derived from *pravŭ*, 'straight.' We cannot doubt that this 'straight' signifies 'running in the same line with something else,' *i.e.* 'in accordance with it.' This, however, raises the question as to what that 'something else' was. According to R. Löning (*Über Wurzel und*

7 The abundant literature on this subject is given in J. Marquardt, *Röm. Staatsverwaltung*, iii.[2], Leipzig, 1885, p. 276.
8 Cf. Macr. *Sat.* III. vii. 4, 'sacrationis vocabulo observantiam divini iuris implevit.'
9 Instances in Mommsen, *Strafrecht*, p. 49.
10 Ulpian, *Dig.* I. i. 1. 2, 'publicum ius est quod ad statum rei Romanae spectat, privatum quod ad singulorum utilitatem . . . publicum ius in sacris, in sacerdotibus, in magistratibus.'

1 *CIL* ix. 439, 440; cf. Plaut. *Trin.* 1044; Livy, XXV. i. 12, XL. li. 8.
2 *CIL* vi. 930, line 17, 'quaecunque ex usu reipublicae maiestateque divinarum humanarum, publicarum privatarumque rerum esse censebit.'

Wesen des Rechts, Jena, 1907, *passim*), the norm was a sense of justice inherent in man. In view of the above interpretations of Slav. *zakonŭ*, *pošlina*, *starina*, and O.H.G. *êwa* (Lat. *œvum*), however, the present writer thinks it more natural and more in keeping with primitive thought to explain Germ. *Recht*, Slav. *pravo*, as signifying that which agrees with the usages of the earliest times.

Other two Teutonic groups of terms denoting 'law' are derivatives of roots originally signifying 'statute,' 'something fixed.' One of these is Eastern Teutonic, the O. Norse *lög* (from which A.S. *lagu* and hence 'law' itself are derived), Goth. (as in Jordanes, 11) *bel(l)agines*, 'laws' = * *bi-lagineis*, connected with *lagjan*, 'to lay,' and, if cognate with Lat. *lex*, going back to the primitive Indogermanic language. The other group, which is represented in all the Teutonic dialects, and tends rather to assume the sense of 'judgment on grounds of law,' includes the Goth. *dôms*, in *dômjan*, O. Norse *dómr*, A.S. *dóm* (the regular term for 'law,' as in *dómbók*, 'law-book'), O. Fris. *dōm*, O. Sax. *dôm*, O.H.G. *tuom*—all cognate with Gr. *τίθημι*, 'set,' 'place,' 'lay,' and Skr. *dhāman*, 'seat,' 'law,' 'order.' As we can hardly suppose that the reference here is to statutes of the primitive gods, whose sphere of authority lay as yet 'beyond good and evil' (cf. art. ARYAN RELIGION, vol. ii. p. 50[b]), any more than to the statutes of kings, who in primitive times had no independent authority to make laws (cf. art. KING [Teut. and Litu-Slav.], above, p. 728), we must regard O. Norse *lög* and Goth. *dôms* as denoting the statutes of those tribal assemblies, presided over by kings, which can be traced back to the Indogermanic epoch, such statutes being then carried in the memory of the people and so handed down from one generation to another (cf. O. Schrader, *Reallexikon der indogermanischen Altertumskunde*, Strassburg, 1901, *s.v.* 'Volksversammlung').

Reference must be made, finally, to a very peculiar term for 'law' found in all the Teutonic languages, viz. Goth. *witôþ* ('*νόμος*'), O. Norse *vitað*, O.H.G. *wizzôd*, etc. It is formed from the Goth. *witan*, 'to know,' and is manifestly to be understood in the sense of the late M.H.G. *wîstuom* (Eng. 'wisdom'), 'legal precedent,' 'instruction in law,' but lit. 'learning,' *i.e.* the learning that consists in the knowledge and application of legal views and usages.

2. Law as oral tradition.—If we want a concise characterization of the legal side of primitive life among the Teutons and Slavs, we cannot do better than take the words of Nestor's *Chronicle*, ch. x.: 'they had the customs and the law of their fathers and traditions; each [tribe] its own usage.' As writing was not yet in use, this ancient law of custom (Slav. *zakonŭ*, O.H.G. *êwa*) could, of course, be preserved from age to age only by oral tradition. How this was done in remote antiquity we have no direct or definite means of knowing, but we may gain some idea of the method by observing the corresponding state of matters found among peoples who still remained without legal documents till far on in historical times. Among Teutonic peoples this was the case with the Scandinavians.

'The highest civic position was that of "the man of law" (*lögmaðr*, *lögsögumaðr*). He was the living code and the custodian of the law for the province and the diet; he was the director of the Thing, he announced its decisions to the public, and in cases of doubt expounded the law. It was his duty to keep a knowledge of law alive among the people, and, as is prescribed by the Icelandic *graugans* and recommended by the Scandinavian statutes, he had every three years to stand upon the "cliff of the law" and recite intelligibly to all the whole civil law, and once a year the procedure of the law-courts (*þingsköp*)' (K. Weinhold, *Altnordisches Leben*, Berlin, 1856, p. 400).

Such 'men of law,' as official guardians and preservers of primitive legal tradition, who in Scandinavia were preferably resorted to even when at length movements were made towards reducing the laws to writing, must have played a part also among the other Teutonic peoples from remote times. In references to the documentary formulation of ancient popular laws, we often hear of *sapientes*, *i.e.* 'the learned' (cf. Goth. *witôþ*, 'law,' 'legal decision'), as those to whom the work was committed. Thus Charlemagne (*Capit.* ann. 789, cap. 62) says: 'lex a sapientibus populo composita.' From a prologue to a collection of ancient popular laws we learn that Theodoric, king of the Franks, when at Chalons, selected a number of men learned in the laws ('viros sapientes qui in regno suo legibus antiquis eruditi erant') with a view to recording the usages of the Franks, Alamans, and Bavarians. The law of the Frisians contains supplements by the *sapientes* Wlemarus and Saxomundus, and that of the Thuringians by the former. With reference to the ordinance of the *Lex Salica*, a prologue dating from the 6th cent. states that in the days when the people were still heathens four men selected by the 'rectores' of the people had expounded the Salic law in three assemblies (cf. O. Stobbe, *Gesch. der deutschen Rechtsquellen*, Brunswick, 1860–64, i. 16 f.; H. Brunner, *Deutsche Rechtsgesch.* i.[2], Leipzig, 1906, p. 298). These *sapientes*, whose legal formulæ are referred to in the sources as *iudicia* ('decisions,' 'opinions'), may be compared to the Scandinavian 'men of law,' and we may safely assume that among the Teutons there had existed from time immemorial a class of 'erudite men' who carried in their minds the ancient law of custom in fixed formulæ, and publicly recited it on given occasions. From traces still found in Scandinavia (cf. K. von Amira, *Grundriss des germ. Rechts*[2], Strassburg, 1901, p. 50 ff.), it may be inferred that these fixed forms were at first metrical; and with this we may compare what Aristotle says of the Agathyrsians, a Transylvanian people, viz. that before they had a knowledge of writing they expressed their laws in song, so that they might not forget them.[1]

3. The beginnings of codification.—Whether, like the Teutons, the Slavs had among them in pre-historic times a special class of learned men who carried in their memories the ancient law of use and wont, and on given occasions communicated it to the people, we have no definite means of knowing. The two races, however, are certainly so far alike that their first attempts to reduce their laws to writing (and it is only with such beginnings that the present article can deal) were due to their contact with the civilized peoples of the South, and to the need of having their relations with these regulated by law, the movement, in the case of the Teutons, being a result of their coming into touch with the Romans, while the Slavs (Russians) were similarly influenced by their intercourse with Byzantium. In the Romanic area arose the *Lex Salica* and the *Lex Ribuaria*; the two West Gothic law-books and the Edict of Theodoric, king of the Eastern Goths; the two Burgundian codes and the Edicts of the Longobards. These, as well as the *Lex Alamannorum*, the *Lex Baiwariorum*, and the three sets of popular laws (Thuringian, Frisian, Saxon) reduced to writing at the instance of Charlemagne, were all in Latin, while the Anglo-Saxon code, which is closely connected with the *Lex Saxonum*, was the only one of the West Teutonic law-books which used the native language.[2]

[1] ἢ ὅτι πρὶν ἐπίστασθαι γράμματα, ᾖδον τοὺς νόμους, ὅπως μὴ ἐπιλάθωνται, ὥσπερ ἐν Ἀγαθύρσοις ἔτι εἰώθασι (*Problem.* xix. 28).

[2] Further details are given fully in O. Stobbe, *op. cit.*; H. Brunner, *op. cit.*; R. Schröder, *Lehrbuch der deutschen Rechtsgesch.*[5], i., Leipzig, 1907; R. Schmid, *Die Gesetze der Angelsachsen*[2], Leipzig, 1858; F. Liebermann, *Die Gesetze der Angelsachsen*, Halle, 1903.

On Slavic soil, again, it was the relations between the Russians and the Greeks that gave occasion to the earliest written formulations of legal enactments. These were the treaties of peace (*dogovory*) between Prince Oleg and the Greeks (A.D. 912), and between Prince Igor and the same people (A.D. 945).[1] The investigations of Ewers[2] seem to show that Oleg's document is the main treaty, and that Igor's contains later supplements. The purpose of each was to bring the relations between Russians and Greeks under legal regulations; cf., *e.g.*, § 3 of Oleg's treaty, referring to homicide:

'If a Russian kills a Christian, or a Christian a Russian, he shall die at the place where he committed the homicide. If, however, he who committed the homicide flees, then, if he possesses property, the nearest kinsman of the slain man shall take his portion *according to the law* (*po zakonŭ*), but the wife of the slayer shall take as much as falls to her *according to the law*,' etc.

As may be inferred from this extract, the treaty makes frequent reference to the Russian law (*zakonŭ*) which, in view of what has already been said, would be no more than an unwritten law of custom, and of which we have the earliest written deposit in the treaties of Oleg and Igor designed to regulate the intercourse of Greeks and Russians. As was shown above, similar considerations, *mutatis mutandis*, underlie the various *leges Barbarorum*. The earliest codification of the Russian law of custom, or of part of it, for the Russians themselves, will then be found in the first form of the *Russkaja Pravda*,[3] which, according to tradition, Jaroslav (A.D. 1019–54) presented as a gift to his allies, the Novgorodians, '. . . and gave them a law (*pravdu*), and caused a statute to be written, saying, "Walk according to this document."' As Ewers remarks, 'So arose the earliest legal document of the Russians, intended primarily for Novgorod, but it must soon have become operative throughout Russia, as there was no other written law in its way.'

It ought to be noted, however, that L. K. Goetz[4] takes quite a different view from the foregoing. He is of opinion (p. 238) that the references to 'Russian law' found in the treaties of Oleg and Igor really presuppose the existence of a *document*—the *Pravda* in its original form (as in Goetz, pp. 6–11; Jireček, iii. 1–17; Ewers, pp. 264–270)—since, as he believes, that earliest formulation of the Russian law of custom was free from all extraneous (Greek or Teutonic) influence, and dates from a time anterior to Vladimir—from the first half of the 9th, if not indeed from the 8th century. He certainly admits that it was in no sense an official document, and supposes that it was written for purely private purposes by, say, a judge of the local law-court (see KING [Teut. and Litu-Slav.]), who 'made these notes to serve as a guide in cases where he might have to pronounce a legal decision regarding the amount of compensation' (p. 230). It is hardly possible to arrive at certain conclusions regarding these matters, although the theory that the *Russkaja Pravda* had a private origin such as Goetz conjectures does not appear to the present writer to be very probable.

LITERATURE.—This has been sufficiently indicated in the course of the article.

O. SCHRADER.

LEAVEN.—Leaven is that which produces fermentation in a mass of dough. The Hebrew word *s'ôr* was the designation of the piece of dough already infected by the leaven which was put into the flour to communicate the leaven to the entire mass before it was baked. Dough that had risen through the influence of this leaven was called *ḥāmēṣ*. Leaven might either be communicated by contagion, by mixing yeast with water, or spring up spontaneously, especially in a warm climate like Palestine. Bread that was entirely free from leaven was called *maṣṣāh*, 'unleavened bread.' Ordinarily in the warm climate of Syria twenty-four hours was sufficient for a mass of dough to become thoroughly leavened. Pliny (*HN* xviii. 26) states that the best yeast was made among the Romans by kneading millet or a fine brand of wheat with must at vintage time. The early Hebrews, however, appear to have depended entirely upon the *s'ôr*, or leavened piece of dough, to preserve and transmit the leaven. The later Jews probably used the lees of wine as yeast.

Leaven, like all striking forms of germ growth, made a profound impression upon the thought and institutions of the Hebrews. Ignorant as they were of its real nature, they interpreted it as it appealed to their senses. The fact that it soured the dough in which it was placed led them to classify it as a type of corruption. Therefore everything infected with leaven was in time regarded as unfit for use in certain parts of the sacrificial ritual. Plutarch has most clearly voiced this widely held belief:

'Now leaven is itself the offspring of corruption and corrupts the mass of dough with which it has been mixed' (*Quaest. Rom.* 109).

Am 4^5 indicates, however, that leaven offerings, either in principle or in practice, were not wholly forbidden in the ritual of northern Israel. Lv 7^{13} and 23^{17} also provide that the bread eaten by the priest might contain leaven, and indicate that leavened cakes were presented in connexion with the Feast of Weeks. Here the early use of wine (Lv 23^{13}; cf. also Ex 29^{40}, Nu 15^5 $28^{7\text{-}14}$), which must in many cases have been fermented, in connexion with sacrifices presents a suggestive analogy and indicates that the provision against that which contained evidence of corruption was not primitive or absolute. W. Robertson Smith (*Rel. Sem.*[2], London, 1894, p. 221) has suggested that in its earliest form the legal prohibition of leaven applied only to the Passover, and in the oldest code (J) of Ex 34^{25} and 23^{18} the prohibition is thus limited. The extension of the prohibition to the shewbread and then to all cereal offerings (Lv $2^{4.\ 11}$ 7^{12} 8^2, Nu 6^{15}) evidently represents a later stage of development, under the influence of the popular idea that leaven represented corruption, and from the desire (so manifest in the Holiness Code and Ezekiel) absolutely to exclude from the ritual everything inconsistent with the idea of Jahweh's perfect holiness. The original reason for the use of unleavened bread in connexion with the Passover meal appears to have been simpler. In primitive times, and still among the Arabs on a low stage of civilization, bread was made and cooked at once. The Passover, in its latest Jewish form, evidently represented a blending of the older nomadic spring festival and the first of the three great Canaanite harvest festivals. After the Hebrews passed over to the agricultural stage, it marked the time when the sickle was first put in the standing grain and the people brought to the Deity the first sheaves gathered from their fields (cf. C. F. Kent, *Israel's Laws and Leg. Precedents*, London, 1907, p. 258 f.). During this busy first week of harvest the people had no time to wait for the slow working of the leaven, but gladly ate the bread made hastily from the unleavened dough. Thus the custom grew into an institution confirmed by the earliest Hebrew laws. In later times it presented such a marked contrast to existing usage that the Passover itself was frequently designated as the Feast of Unleavened Bread. The tendency to regard leaven as a type of putrefaction doubtless

[1] Texts in H. Jireček, *Svod Zákonuv Slovanskych*, Prague, 1880, p. 1 ff., tr. in J. P. G. Ewers, *Das älteste Recht der Russen*, Dorpat, 1826, p. 132 ff.

[2] *Op. cit.* p. 123.

[4] *Das russische Recht* (*Russkaja Pravda*), i., 'Die älteste Redaction des russischen Rechts,' Stuttgart, 1910.

fortified this earlier custom and explains the tendency, already noted, to extend the prohibition to all cereal offerings. It is paralleled by the extension of a similar prohibition so as to include all fermented liquors.

Because of its peculiar characteristics leaven was used figuratively in early literature in two very different senses. In Mt 13^{33} and its parallel, Lk $13^{20f.}$, it is used by Jesus as a symbol of the quiet, pervasive, and rapid extension of the principles of the rule or kingdom of God in human society. Its more common use is illustrated by Mt 16^{6-12} (cf. Mk 8^{15}, Lk 12^{1}), where Jesus warns His disciples against the leaven of the Pharisees, Sadducees, and Herodians. It is a pregnant, concrete figure, which well describes the secret, persistent, corrupting influence of Jesus' foes, who were seeking in an underhand way to pervert the loyalty even of His immediate followers. The Rabbinical writers also used leaven as a symbol of sin and corruption. St. Paul, in 1 Co 5^{6} and Gal 5^{9}, evidently quotes a familiar proverb which graphically reflects this current idea: 'A little leaven leaveneth the whole lump.' In 1 Co $5^{6f.}$ he goes on to develop a figure based on the well-known Jewish custom of thoroughly cleansing their houses of all leaven in preparation for the joyous Passover feast: 'Know ye not that a little leaven leaveneth the whole lump? Purge out the old leaven, that ye may be a new lump, even as ye are unleavened. For our passover also hath been sacrificed, even Christ: wherefore let us keep the feast, not with old leaven, neither with the leaven of malice and wickedness, but with the unleavened bread of sincerity and truth.'

The Roman Flamen Dialis was forbidden to touch 'farinam fermento imbutam' (Aul. Gell. x. xv. 19). In other ethnic religions leaven plays little part.

LITERATURE.—There is no literature beyond what is cited in the article.

C. F. KENT.

LEGALISM.—See NOMISM.

LEIBNIZ.—1. Life.—Gottfried Wilhelm Leibniz, or Leibnitz, was born at Leipzig on 1st July 1646. His father, a professor of Moral Philosophy at the University of the same town, died in 1652, leaving his son under the care of his young widow (his third wife), who appears to have discharged her duties with admirable skill. The family was well-connected, of the official class, with considerable means, and the mother, a religious woman, impressed on her children the importance of maintaining the good name of their ancestors. Leibniz became in great measure his own teacher, and even in his earliest days his love of study was extraordinary. He learned Latin by himself at the age of eight, and at ten, by the advice of a neighbour, his father's library was to his great joy opened to him, with the words, 'Tolle, lege.' One study succeeded another in the case of this extraordinary boy, who, after mastering Latin and Greek, devoted himself to the learning of the Schools. At the age of fifteen, in 1661, he became a student at the University of Leipzig. But the teaching there was not such as to satisfy him, and it was through his private study that he became acquainted with the philosophy of Descartes. He also read Francis Bacon, Cardan, Campanella, Kepler, and Galileo, and he soon realized the distinction between the new and the old methods of science. The summer of 1663 was spent at Jena under Weigel, a mathematician as well as a philosopher, and his interest in mathematics developed from this time, though it was not until later in life that he reached the deeper study of the science. The years 1663–66 were occupied in legal studies, and in the last of those years he obtained his doctorate of law at Altdorf (not having already received it at his own University of Leipzig), and the brilliancy of his dissertation procured him the offer of a professorial chair. This, however, he declined, having, as he said, different ends in view. His mother died in 1664, and he never visited his native town again except in passing. Although not yet twenty-one, he had already written several remarkable essays, which showed the trend of his later work. One of them dealt with the importance of the historical method in law. Nüremberg was Leibniz's next place of abode, and there he became (like his great predecessor, Descartes) acquainted with the Order of the Rosicrucians, of which he became, indeed, a member. What was more important, he also became acquainted there with J. C. von Boineburg, who had been first minister to the Elector of Mainz, and by whose advice he both printed his *Nova Methodus* in 1667 and dedicated and presented it to the Elector. This act determined the young man's future life, for he entered the Elector's service in consequence of the acquaintance then made. Leibniz now took to political writing; he defended (unsuccessfully) the claims of the German candidate to the crown of Poland in 1669, and in 1670, in his *Thoughts on Public Safety*, he advocated a new league ('Rheinbund') for the protection of Germany. He also brought forward the proposal that the French king, Louis XIV., instead of marching on Holland (a step then imminent), should make an expedition to Egypt. Letters referring to this scheme were sent to Louis by Boineburg, and in 1672 Leibniz, as the author of the memorial, was requested to go to Paris. This he did, but he was never granted the interview which he desired. The history of the scheme was hidden in the archives of the Hanoverian Library until Napoleon learnt of it on taking possession of Hanover in 1803.

In Paris Leibniz became acquainted with Descartes's successors Arnauld and Malebranche, and also with physicists such as Christian Huygens, and he was soon immersed in the study of the philosophical and scientific questions on which he proceeded to write. As early as 1671 he had written *Hypothesis physica nova*, an essay on physics, and more especially on the subject of gravitation, so that he was already known in the scientific world. His tour was extended to London, where he became acquainted with Boyle, Oldenburg, and Newton. A calculating machine (an improvement on that of Pascal), which was one of his many scientific inventions, was exhibited at the Royal Society of London, and he was elected a Fellow in 1673. It is from this period that his studies in higher mathematics date, and he now entered upon the series of investigations which culminated in his discovery of the differential and integral calculus. This gave rise to a long controversy with Newton as to which of them first invented the mathematical method of the calculus. This famous controversy resulted in the conclusion that, though Newton was in possession of a similar method as early as 1665, in all probability it was not known to Leibniz. Each discovered the method independently. Leibniz published his account of the method in 1684; Newton's was first published in 1693.

In 1673 Leibniz entered the employment of Duke Frederick of Brunswick-Lüneburg as librarian and private councillor, and in 1676 he removed to Hanover, visiting Spinoza in Holland on his way. At Hanover he passed the rest of his life. He supported by his pen the claims of the dukedom in various ways, and also wrote a history of the Brunswick-Lüneburg family, for which work he had to travel in Germany, Austria, and Italy. At Rome he was offered the custodianship of the

Vatican Library by the pope, but one of the conditions was that he should become a Roman Catholic, and to this Leibniz would not consent. He was, however, interested in a scheme which was then being mooted for the reunion of the Protestant and Roman Catholic Churches, and it was in connexion with this discussion that he wrote, in 1686, *Systema theologicum*, in which he tried to find some common standing-ground between the two religions. The letters to Leibniz from Bossuet and others show that the writers hoped to convert him to Roman Catholicism; and, when it was clear that they would not succeed, the letters ceased. He later attempted to reconcile the Reformed and Lutheran Churches, also without success. In addition to his literary pursuits, Leibniz interested himself in the mining operations carried on in the Harz Mountains and in the coining of silver found there.

In 1690 Leibniz was appointed librarian at Wolfenbüttel, and some years later he formed a friendship with the Electress Sophia Charlotte of Brandenburg and her mother Princess Sophia of Hanover. It was through this friendship that his connexion with Berlin arose, and he was invited thither in 1700. In this year the Academy which he planned was founded by Frederick I. of Prussia with Leibniz as President for life. He proceeded to suggest the establishment of similar societies in St. Petersburg, Dresden, and Vienna, with various degrees of success. In recognition of this work Leibniz was made privy councillor of justice by the Elector of Brandenburg; the same honour was given him by the Elector of Hanover and by Peter the Great of Russia. He likewise had the distinction of being granted an imperial privy councillorship when on a visit to Vienna in 1712, while he was also made a baron of the Empire (Reichsfreiherr). While in Berlin he had much pleasant intercourse at Charlottenburg with his royal pupil the Electress Sophia Charlotte, and her death in 1705 was a severe blow to him. Indeed subsequently to that event his visits to Berlin became less frequent, and that which took place in 1711 was the last. After the visit to Vienna in 1712 he returned to Hanover in 1714, but the Elector George had by that time gone to England to assume the crown, and Leibniz was disappointed at not being asked to accompany him, since he had supported his father's claims to the Elector's hat. He was directed instead to remain in Hanover and finish his history of Brunswick. This was the last work of his life. He died on November 14th, 1716, and his last years were far from happy. He was ill, neglected after his royal friend's death by those who should have helped him, and embittered by many controversies; and, when the end came, hardly any notice was taken of it either in Berlin or in London, whither his sovereign had gone. His only mourner in Hanover was Eckhart, his secretary, and not till 1787 was a monument erected to his memory. To the last he showed a marvellous power of work in very many directions; indeed his attainments were those of an almost universal kind, and such as have seldom been equalled. As he was naturally ambitious, the neglect from which he suffered pained him greatly.

It is matter for regret that Leibniz's teaching has to be derived in great measure from isolated papers, sketches, and letters. In 1703–04 he worked out his criticisms on Locke's *Essay*, but the author's death prevented their publication. In 1710 appeared his most important philosophical work, the *Essais de théodicée sur la bonté de Dieu, la liberté de l'homme, et l'origine du mal*. In 1714 he wrote *La Monadologie*, and in that year there also appeared the *Principes de la nature et de la grâce*. During his latter years he corresponded (by the desire of the Queen of England) with Samuel Clarke 'sur Dieu, l'âme, l'espace, la durée.'

2. **Philosophy.**—Leibniz's philosophical doctrines are mainly concerned with the mode in which substance is to be conceived. They represent a distinct advance on the Cartesian view, which took for granted that there were *two* substances, connected only, if indeed they were connected at all, by the power of God. Thus Cartesianism showed itself to be a dualism which successive philosophers have in different ways done their best to solve. Spinoza, of course, endeavoured to absorb them into one Divine Substance. For him 'determination is negation,' and so far did he carry this doctrine that in his case unity is preserved only at the expense of the reality of the parts; the Substance, that is to say, is self-existent and unconditional, requiring no other thing from which it is formed, or part which may determine it. This development of the Cartesian doctrine is, no doubt, a consistent one, and one which carried the principle to its logical conclusion, but it ends in something which much resembles the Oriental theory of absolute self-identity. Leibniz, on the other hand, accepts the multiplicity of substance (the ultimate reality), which he terms monads (an expression originally perhaps adopted from the Pythagoreans, but more directly from Giordano Bruno), and these monads he proceeds to determine. Assuming that substance can be conceived only as force, he states that the metaphysical view of monads is that they are simple substances without parts, and, as there are no parts, there can be 'neither extension, form, nor divisibility.' No dissolution of these elements need be feared, and there is no conceivable way in which they can be destroyed by natural means. Nor can they by these means come into being. Thus a monad can become existent or come to an end only all at once, *i.e.* by creation in the one instance or annihilation in the other.

These monads are therefore, so to speak, centres of force, as distinguished from manifestations of world-force. They are not to be confused with the atoms of Democritus or the materialists, inasmuch as they have within them the power of action; indeed it is their nature to act, and they also have what might be called a spiritual nature. In his *Monadology*, Leibniz states that the monad likewise has 'perception and appetition.' The perception is, however, not necessarily conscious perception, since conscious perception represents another stage, which he calls 'apperception.' In perception we have a unity which has a multiplicity of relations, and is thus variously modified. Likewise the appetition is not necessarily conscious desire or will; it represents change within the identity of a simple substance. Hence we must conceive the monad as possessed of spontaneity and as capable of evolving its nature and experience from itself. It is not inert and passive, but is a microcosm, 'the universe in little'; indeed Leibniz goes so far as to make use of the Aristotelian term, and say that the monads are entelechies because they have a

> 'certain perfection which makes them the sources of their internal activities, so to speak, incorporeal automata' (§ 18).

They are not, however, pure entelechies, as is shown by the differences among themselves.

> 'Each monad must be different from every other. For in nature there are never two beings which are perfectly alike' (§ 9).

He considers that the Cartesian view of perception is wrong, because it treats as non-existent those perceptions of which we are not commonly aware, and he believes that this causes a failure to distinguish between a prolonged unconsciousness and death; this error has even 'confirmed ill-

balanced minds in the opinion that souls are mortal' (§ 14).

Leibniz does not give the name 'soul' to everything that has perception and desires; for such, he says, the general name monads or entelechies should suffice.

The name of 'souls,' he considers, should be reserved for those 'in whom perception is more distinct, and is accompanied by memory' (§ 19). 'Memory provides the soul with a kind of consecutiveness which copies [*imite*] reason, but which is to be distinguished from it' (§ 26). 'It is the knowledge of necessary and eternal truths that distinguishes us from the mere animal and gives us Reason and the Sciences, raising us to the knowledge of ourselves and of God. And it is this in us that is called the rational soul or mind [*esprit*]' (§ 29).

This knowledge makes us conscious of ourselves, of substance, and of God; it teaches us that what is limited in us is in Him without limits.

Reasoning is founded by Leibniz on two great principles: (1) that of Contradiction, by which we judge that to be false which involves a contradiction and that true which is contradictory to the false; and (2) that of Sufficient Reason, whereby we hold that there can be no fact, real or existent, 'unless there is a sufficient reason why it should be so and not otherwise, even although these reasons usually cannot be known to us.' There are also two kinds of truths, those of reasoning and fact.

'Truths of reasoning are necessary, and their opposite is impossible; truths of fact are contingent, and their opposite is possible' (§ 33).

Then, again, the organic body of each living thing is a kind of divine machine or natural automaton,

'which infinitely surpasses all artificial automata. . . . For a machine made by the skill of man is not a machine in each of its parts. . . . But the machines of nature, namely living bodies, are still machines in their smallest parts *ad infinitum*' (§ 64).

Each portion of matter is not only infinitely divisible but also actually subdivided without end. The smallest particle of matter has in it a world of creatures—living beings, animals, entelechies, souls—and nothing is sterile, or fallow, or dead, or confused save in appearance. Each living body has a dominant entelechy (in the animal the soul), but the members of this body are full of other living beings, plants, and animals, each of which has its dominant entelechy or soul.

There is never absolute birth (*génération*) nor complete death consisting in the separation of soul from body.

'What we call *births* are developments, growths, while what we call *deaths* are envelopments and diminutions' (§ 73).

Organic bodies do not really proceed from chaos, but always from seeds in which there was some pre-formation.

'The organic body was already there before conception, but also a soul in this body, and in short the animal itself' (§ 74).

The animal is merely prepared for the great transformation of becoming another kind of animal.

The fact that the soul and the animal itself are alike indestructible makes it easier for Leibniz to explain his theory of the union of or material agreement between soul and organic body. Both soul and body follow their own laws, and

'they agree with each other in virtue of the pre-established harmony between all substances, since they are all representatives of one and the same universe' (§ 78).

Souls and bodies, the two realms of efficient causes and final causes, are in harmony with one another. This is the famous doctrine of pre-established harmony, which is often misrepresented, since it is said to be arbitrarily dependent on the will of God, whereas in reality it proceeds from the very nature of the monads themselves as percipient, spontaneous beings. Leibniz believes that Descartes was not far off from his doctrine, and that he would have arrived at it had he known that there was a

'law of nature affirming the conservation of the same total direction in matters' (§ 80).

The Leibnizian and Cartesian theories of mechanical physics were the subject of much controversy. For Descartes's theory of the constancy of the quantity of motion in the world, Leibniz substitutes the principle of the conservation of *vis viva*, but the long controversy was probably due in great measure to the ambiguity of the terms employed. It really concerns the conservation of momentum as compared with the conservation of energy, which is what Leibniz maintains. For Leibniz, motion is simply a change of position. It is not a positive quality belonging to the moving of a body, but a relative one, and rest itself is merely an infinitely small degree of motion.

Leibniz illustrates his theory of pre-established harmony by the well-known example of the two clocks. There are three alternative methods by which they may be made to keep perfect time with one another: (1) the machinery of the one may actually move the other, being connected, *e.g.*, by a piece of wood, which represents Locke's theory of mutual influence; (2) whenever one moves the mechanism, a similar alteration may be made in the other by a skilled workman, which is the doctrine of the Occasionalists; or (3) the clocks may have been so perfectly constructed at the first as to continue to correspond at every instant without any further influence or assistance, which is Leibniz's view of a pre-established harmony. Another simile that he uses is, however, a more adequate one: he compares the monads to two independent bands of musicians playing in perfect harmony.

As regards our knowledge, it is all developed by the soul's own activity, and sensuous perception is but a confused sort of knowledge. Locke had denied that there were any innate ideas, and held that all our knowledge must reach us from outside, and through the senses. Descartes believed that it came from pure thought and independently of the senses. Leibniz held that his theory harmonized the two. The soul of man as monad is an active spontaneous force, and its ideas are innate, but they are not clear and distinct, as Descartes would have us believe. To begin with, they are confused and imperfect, and it is only by means of a developing force that they reach clearness and self-evidence. Locke's sensation is really confused perception, and it is made clear only by the result of an internal experience. Human knowledge is both *a priori* and *a posteriori*.

'As there is a perfect harmony between the two realms in nature, one of efficient and the other of final causes, there is another harmony between the physical realm of nature and the moral realm of grace, *i.e.* between God, as Architect of the mechanism [*machine*] of the universe, and God considered as Monarch of the Divine City of spirits [*esprits*]' (§ 87).

Thus Leibniz justifies the ways of God to man, the punishment of some, and the reward of others, as being in accordance with the divine harmony. Could we sufficiently understand the order of the universe, we should find that it is impossible to make it better than it is. Leibniz therefore makes God the necessary postulate of morality, and in his *Théodicée* he works out his theology and defends his view of the universe as the best possible world, and shows how faith and reason may be found to coincide and harmonize. God must either exist as a self-existent Being or be impossible. The will is an effort towards that which one finds good, and is free only in the sense of being exempt from external control, and, as it has a sufficient reason for its action, determined by what seems good to it. Freedom consists in following reason, while servitude comes from following the passions which proceed from confused perceptions.

Probably few philosophers have suffered more

than Leibniz from misrepresentation of their systems. We have Voltaire's stinging satire of the doctrine of the 'best possible world' in his *Candide*, but that was a satire more than a misrepresentation. The doctrine of the pre-established harmony, however, lent itself to easy caricature, as did that of the living monads. Few of Leibniz's writings were published during his lifetime, and he left masses of MSS in detached papers and little treatises, difficult to sort out. His two principles of contradiction and sufficient reason were never clearly related to one another, and existed, so to speak, side by side in independence. Newton's physics did not altogether accord with Leibniz's metaphysics, and Newton's triumph meant corresponding discredit to Leibniz. His successor, Christian Wolf, though he systematized his philosophy, was not a true follower, or at least he followed him in a pedantic way. Perhaps Kant understood his position better, although he advanced far beyond it. Hegel terms it an 'artificial system,' but he appreciates its worth as showing forth the principle of individuality. Goethe adopted the Leibnizian conception of monads and souls. Later on Lotze re-constructed the philosophy of Leibniz on his revolt as a man of science against the idealism of Fichte, Schelling, and Hegel, though he was influenced by Kantian doctrines and rejected much of Leibniz's teaching.

[3. **Mathematics.**—Leibniz was a pioneer in the science of comparative philology, and compared and collected various remote languages; this was but one of his very numerous studies outside philosophy. It was to mathematics, however, that he specially devoted his attention. Leibniz's mathematical studies were carried beyond what was usual at the time under Weigel at Jena in 1663. The *de Arte Combinatoria*, which he wrote in 1666, is of logical rather than mathematical interest. In 1673, when in London, he told Pell that he had obtained the summation of infinite series by differences, but in this he had been anticipated. After this he studied under Huygens in Paris. Among other results at this period, he obtained the important series $\frac{\pi}{4} = 1 - \frac{1}{3} + \frac{1}{5} - \frac{1}{7} + \frac{1}{9} - \ldots$

He now began his great work on the infinitesimal calculus. He started with the conception, previously employed by Barrow, Newton's teacher, of a 'triangulum characteristicum' at any point on the curve. This consists of the chord joining two adjacent points, together with parallels to the axes of co-ordinates drawn through these points. In the limit when these points come to coincide with the given point, the chord becomes the tangent at it. With the aid of this conception he attacked problems of tangency, showing that the so-called 'inverse problems of tangents' could be reduced to quadratures, or, in modern terminology, integrations. He regarded integration as a summation of infinitesimals. His original notation for $\int y dx$ was '*omn.y*,' *omn.* standing for *omnia*. Later he introduced the symbols $\int$, standing for *S*, or *Summa*, and *d*, for *differentiâ*, which are still used in the calculus. By 1676 he had applied the new methods to the 'direct problems of tangents' and to solid geometry, and in the following year he gave correct rules for the differentiation of sums, products, powers, and other functions.

In 1684 he published his first paper on the differential calculus in the Leipzig *Acta Eruditorum*. Besides tangency, maxima and minima and refraction are treated; dy and dx are still apparently taken as finite, though small.

Two years later he gave a sketch of the integral calculus in the same journal. Here dy and dx are regarded as quantities, though infinitely small. His final position appears to have been that they are 'quantitates assignabiles' which spring from 'quantitates inassignabiles' by the law of continuity, but on the whole question he showed considerable vacillation. His view of the calculus, though more general, and perhaps more fruitful, than Newton's, was on the whole less consistent and logical. Thus he always seems to have regarded a curve as a polygon with infinitesimal sides, whilst Newton usually considered it as generated by the continuous motion of a point. In the minds of both, however, there was probably enough confusion to justify Berkeley's attack in *The Analyst*.

Some idea of the variety and magnitude of Leibniz's mathematical achievements can be gathered from the fact that, besides the notation of the calculus, we owe to him the words 'co-ordinate' and 'axis of co-ordinates' in analytical geometry, the beginnings of the theories of determinants, osculation, and envelopes, and the method of partial fractions. 'Leibniz's theorem' deals with the repeated differentiation of a product. In mechanics his work, though fruitful, contains many errors. He regarded *vis viva*, which varies as the square of the velocity, as the proper measure of the force in a moving body, whilst Descartes had used momentum, varying directly as the velocity, for this purpose. Though the attack on Descartes was unjustified, yet this view ultimately led to the fundamental modern conception of energy.—J. B. S. HALDANE.]

LITERATURE.—None of the many editions of Leibniz's works is complete. There is, first of all, the *Opera Omnia*, by L. Dutens, Geneva, 1768, which was held to be complete when published. In 1843 G. H. Pertz began an edition of his works (1st ser. 'History,' 4 vols., Hanover, 1843–47, 2nd ser. 'Philosophical,' 1 vol., incomplete, Berlin, 1846). The only complete edition of his mathematical works is the third of the same series, 'Leibnizens mathematische Schriften,' ed. C. J. Gerhardt, 7 vols. and supplementary vol., Halle and Berlin, 1850–63. The most important edition of his philosophical works is by C. J. Gerhardt, *Die philosophischen Schriften von G. W. Leibniz*, 7 vols., Berlin, 1875–90. There are also Leibniz's *Deutsche Schriften*, ed. G. E. Guhrauer, 2 vols., Berlin, 1838–40; A. Foucher de Careil, *Œuvres de Leibnitz*, 7 vols. (planned in 20 vols.), Paris, 1859–75; Onno Klopp, *Die Werke von Leibnitz*, 10 vols., Hanover, London, and Paris, 1864–77, containing the historical and political works; and A. Jacques, *Œuvres de Leibnitz*, 2 vols., Paris, 1847. There is an edition (not complete) of his philosophical works by J. E. Erdmann, Berlin, 1839–40, and one by P. Janet, 2 vols., Paris, 1866.

For the life and teaching of Leibniz we have Robert Latta, *The Monadology and other Philosophical Writings*, Oxford, 1898 (gives a translation of the *Monadology* and other philosophical works); J. T. Merz, *Leibnitz*, in Blackwood's Philosophical Classics, Edinburgh, 1884; W. R. Sorley, art. 'Leibnitz,' in *EBr*[11]; E. Boutroux, *La Monadologie: accompagnée d'eclaircissements*, Paris, 1881; cf. also Le Bovier de Fontenelle, *Eloge* (=vol. i. of the *Opera Omnia*, Geneva, 1768 [see above]), in the *Acta Eruditorum*, and L. Grote, *Leibniz und seine Zeit*, Hanover, 1869; E. Pfleiderer, *Leibnitz als Patriot, Staatsmann und Bildungsträger*, Leipzig, 1870; F. Kirchner, *G. W. Leibniz: sein Leben und Denken*, Köthen, 1876. There are countless monographs on Leibniz, besides good accounts of him by Kuno Fischer, 'G. W. Leibniz, Leben, Werke, und Lehre' in *Gesch. der neueren Philosophie*, Heidelberg, 1902; E. Zeller, *Gesch. der deutschen Philosophie*, Munich, 1873. Among the critical works may be mentioned Bertrand Russell, *Critical Exposition of the Philosophy of Leibnitz*, Cambridge, 1900. Further literature is cited in *DPhP* iii. [1905] 330–338.

LEPROSY.—See DISEASE AND MEDICINE.

LESSING.—1. Life and times.—It is easy for us to see in retrospect that the achievement of Lessing lay in preparing the way for the complex creative movement associated with the names of Goethe and Schiller; Lessing himself, however, looked forward to a future only dimly illumined by rays of hope, and he went out perforce 'not knowing whither he went.' The century following the close of the Hundred Years' War had seen a very slow and partial recovery of the German national life from the utter barbarism, the degeneration of morals, of manners, and of educational and political institutions which resulted from that devastating war. But at the middle of the 18th cent., when Lessing's literary career began, a new life was stirring; universities were

being founded, and the latent national genius was re-asserting itself in the varied interests that we should comprise under the term 'culture.'

Gotthold Ephraim Lessing was born at Kamenz, in the Saxon province of Upper Lusatia, on 22nd Jan. 1729, the second child and eldest son of a family of twelve born to a Lutheran clergyman, afterwards head-pastor of the town, and his worthy but not remarkable wife. The boy was brought up in simple circumstances and in a very orthodox family circle. In 1741 he was sent to the Klosterschule of St. Afra at Meissen, in which the monastic spirit was associated with a thorough classical education, a strict discipline, and a healthy intermixture of boys from different social strata. In his spare hours he supplemented his vigorously pursued studies by extensive reading in his favourite authors—Theophrastus, Plautus, and Terence—and, when he left in June 1746, in consequence of the disturbed condition of the town after the battle of Kesselsdorf, it was with a thorough mastery of Latin and Greek, some knowledge of modern languages, and well-developed mathematical powers. His farewell oration was on 'Mathematics among the Ancients.' He next entered Leipzig University, where he came under the influence of J. A. Ernesti and J. F. Christ in classics and of A. G. Kästner in mathematics. Fearful lest keen study should make him a dry pedant, he entered society and acquired the accomplishments suited to a man of the world. Introduced into dramatic circles, he completed his first play, which he had commenced at school, and it was performed at Frau Neuber's theatre. His new interests gave his good father much anxiety, for the young student had been destined for the Church; and he had to promise to study medicine before his parents' confidence was restored.

Leaving Leipzig in consequence of debts which he had contracted by standing security for some actor-friends, he went for a time to Wittenberg, but in 1749 he found himself in Berlin, earning a living by translating, and at the same time making a literary venture with his friend Christlob Mylius, in the shape of a *Quarterly Review* intended to form a history of dramatic poetry and to contain translations of classical and foreign dramatic works. The *Review* ceased to appear in the following year, since Mylius had made a statement in it with which Lessing refused to be associated. Another periodical appearing in parts from 1754 to 1758 showed Lessing's determination to devote himself to the reform of the stage.

He published at this time in the *Vossische Zeitung* a series of criticisms which attracted much attention. On returning to Wittenberg for a few months, he was engaged in theological studies, and wrote the well-known *Rettungen* (the defence of certain little-known and much-maligned authors of the past). At the same time he made a special study of Horace and Martial, and entered into a controversy with a certain pastor, S. G. Lange, utterly destroying the latter's claims to be 'the German Horace,' and securing a respectful hearing for any critiques which he might care to publish. Once again in Berlin, Lessing became the friend of the learned Moses Mendelssohn and the publisher C. F. Nicolai.

His literary activity was now great, and, apart from his translations of important foreign books, he published from 1753 to 1755 six volumes of collected works, containing songs, odes, epigrams, letters, critiques, fables, and his tragedy, *Miss Sara Sampson*. For a second period he resided in Leipzig, and then started an abortive grand tour as travelling companion to a rich young man. Back again in Leipzig, he developed an intimate friendship with the soldier-poet E. C. von Kleist (destined to be cut short after two years by von Kleist's untimely death), and then, disappointed by his failure to obtain an official post in Prussia, he returned to Berlin (1758).

Lessing's next production was the *Letters upon Current Literature*; these were epoch-making in German literature. Saddened by the loss of his friend von Kleist, and lonely in his conscious superiority to the literary circles of Berlin, he went for a time to Breslau, acting as secretary to the governor, General Tauentzien, developing a strange love of the gaming-table, collecting a large and valuable library, working at his *Laocoon*, and sketching out his play *Minna von Barnhelm*. After an illness due to overwork, he gave up his post in 1765, and, refusing a professorship which involved certain duties uncongenial to an independent man, returned to Berlin. He was unable to obtain the post of librarian to Frederick the Great, and turned to finish the *Literaturbriefe*, the *Laocoon*, and *Minna von Barnhelm*. We next find Lessing at Hamburg, acting as 'critic of the plays and actors' in connexion with a newly founded National Theatre, issuing the criticisms which are preserved under the title *Hamburgische Dramaturgie* ('Hamburg Dramatic Writings'), and engaging in violent single-handed controversy with C. A. Klotz (professor of rhetoric at Halle), whom he ultimately laid low by his *Antiquarische Briefe* ('Letters upon Archæology'). In 1770 he accepted the post of librarian of the Wolfenbüttel Library under a Brunswick prince, but his life at Wolfenbüttel was dull in the extreme. He was importuned by his family for financial help, and cut off from intercourse with congenial companions. He was betrothed in 1771 to Eva König, but was unable to marry her till five years later. In the meantime he published his *Emilia Galotti* and afterwards some 'fragments' by his friend H. S. Reimarus, which aroused another controversy. He then went to Austria, and, when just about to marry, felt compelled to accept an invitation to accompany Prince Leopold of Brunswick on a journey to Italy. The journey lasted nine months, but involved Lessing in uncongenial ceremonies, and left him few opportunities of studying Italian works of art. In 1776 he was married, and he had a happy life with his cultured and refined wife; but their joy was short-lived, for in 1778 a son died after only a few hours of life, and his wife died a fortnight later. *Nathan the Wise*, *The Education of the Human Race*, and *Dialogues for Freemasons* mark the remaining years of his life, which ended at Brunswick suddenly after a brief illness on 15th Feb. 1781, when he was only fifty-two years of age.

Perhaps the greatest service which Lessing rendered to his age lay in his devotion to truth even more than in his influence in changing the direction of creative literary work, in revolutionizing the principles of criticism, and in stimulating theological study. 'In his person,' said D. F. Strauss, 'allegiance to truth and love of truth personified guard the portals of our literature' (*Lessing's Nathan der Weise*[2], Berlin, 1866). It was righteous indignation rather than cynical irony that gave point to his most acute criticisms. Sham and the worship of mere appearances were hateful in his eyes.

'Not the truth which a man possesses or believes himself to possess, but the sincere attempt which he has made to reach the truth, constitutes his worth. For not through the possession of truth, but through inquiry after truth, are developed those powers in which his ever-increasing perfection consists. Possession makes the mind stagnant, inactive, proud. If God held in His right hand all truth, and in His left only the ever-active impulse to search for truth, even with the condition that I must for ever err, and said to me, "Choose!" I should humbly bow before His left hand and say, "Father, give! Pure truth belongs to Thee alone!"' (*Sämmtliche Schriften*, ed. Lachmann and Maltzahn, xi. (2) 401).

Though Lessing's mind sought creative expression, its bent was in the long run predominantly critical. While he could not create without stimulating his own critical faculty, and could not arrive at critical conclusions without desiring to apply them, we owe more to his insight as a critic than to his genius as a creative artist. And our debt has found striking expression in words which give an illuminating estimate of the critic as well as a testimony to his influence on subsequent authors.

Macaulay once said that the reading of Lessing's *Laocoon* formed an epoch in his mental history, and that he had learned more from it than he had ever learned elsewhere (G. H. Lewes, *Life of Goethe*[2], London, 1864, p. 57). Carlyle said in his 'Essay on the State of German Literature' (*Works of T. Carlyle*, London, 1857, ii. 36): 'It is to Lessing that an Englishman would turn with readiest affection. . . . As a poet, as a critic, philosopher, or controversialist, his style will be found precisely such as we of England are accustomed to admire most; brief, nervous, vivid; yet quiet, without glitter or antithesis; idiomatic, pure without purism, transparent yet full of character and reflex hues of meaning.'

2. Contributions to æsthetics.—Æsthetics has always occupied an important place in modern German philosophy, but it is questionable whether Kant or Schelling, Hegel or Schopenhauer, exercised so potent or so far-reaching an influence as Lessing, whose *Laocoon* (written between 1760 and 1765 and published in 1766) gathered together in a suggestive form the results of previous critical theory and handed them on to a dawning new age along with an arresting presentation of several new problems. The book deals only by way of illustration with the sculptured group which gives it its title. Its theme is the dissimilarity of poetry on the one hand and painting and plastic art on the other; it attacks the current but uncritically held view summed up in Plutarch's quotation from Simonides referring to poetry as a speaking picture and painting as a dumb poem. Lessing shows that peculiar laws govern these different arts, and, in particular, that the choice of a 'pregnant moment,' essential to the artist, is not the task of the poet. The artist must select a moment at which the object of his art is so acting that the representation of it shall be most suggestive to the imagination—suggestive both of past and of prospective action; the poet, however, is able to prepare the imagination of his hearer or reader beforehand and even to influence it subsequently;

in other words, he is able to lead up to his critical moment and to tone down the effects of his treatment of it. Virgil could for this reason represent Laocoon as screaming with anguish; but the sculptor shows him to us as emitting deep sighs.

'That choice which allows free play to the imagination is alone a happy one. The more we gaze, the more must our imagination add; and the more our imagination adds, the more we must believe that we see. Now in the whole course of an emotion there is no moment which offers this to so little advantage as its climax. There is nothing higher beyond this, and to present the extreme to the eye is to clip the wings of fancy and to compel her, since she cannot get beyond the impression of the senses, to seek lower and weaker images wherewith to occupy herself, shunning, as her limit, the visible fulness of expression. Thus, if the Laocoon sighs, the imagination can hear him shriek. But if he shrieks, it can neither rise a step above, nor descend a step below this representation, without beholding him in a more endurable and consequently less interesting condition. It either hears him merely moaning or sees him already dead' (*Laocoon*, ch. iii.).

With some of the exaggeration of an advocate, Lessing inveighs against descriptive poetry; action in the widest sense of the word, we might say 'the dramatic,' that which changes, moves, and progresses (including feeling), is to him the primary object of poetry. So far as poetry represents things co-existing in time, it must do so by representation of things in succession. A fruitful illustration of this, as of so many of his theses, is drawn from Homer.

'Now a shield, at any rate, it will be said, is a single material object, and consequently a description of it, according to its parts in juxtaposition, would not form a suitable subject for poetic representation. And yet this very shield [that of Achilles] has been described by Homer, in over a hundred magnificent lines, with such minuteness and exactitude as regards its material, its form, and all the figures which filled its vast surface, that modern artists have experienced little difficulty in producing a drawing corresponding with it in every detail. My reply to this particular objection is that I have already replied to it. What Homer does is not to describe the shield as it is when finished and complete, but as it is being wrought. Here again, therefore, he has availed himself of that admirable device of transforming what is co-existent in his subject into what is consecutive, thus giving us a vivid picture of an action instead of a tedious painting of a material object. We do not see the shield, but the divine craftsman in the act of making it. He steps, with hammer and tongs, before his anvil, and, after the plates have been forged out of the raw material, the figures destined by him to adorn the shield rise from the bronze one by one before our eyes, beneath the finer strokes of his hammer. We do not lose sight of *him* until *the work* is completed. At length it is finished, and we marvel at it with the confident astonishment of an eye-witness who has beheld the actual operation' (*ib.* ch. xviii.).

Incidentally Lessing discusses a number of special topics of interest to the student of art from the comparative point of view. The book, as we have it, is but a fragment of Lessing's projected work, but its charm lies in the skill with which the main themes are relieved, and at the same time illustrated, by digressions which stimulate the imagination instead of wearying the critical faculties.

'We are plunged at once into the midst of his argument; then he draws back, alternately approaches and recedes from his goal, taking occasionally a side-glance at objects he meets on his way. We see him in the very act of conquering the truths he intends to expound, witness his hesitancy while they are still uncertain, share his pleasure as they burst upon him in their full significance. . . . If we except the best of Plato's dialogues, it would be difficult to name any book which gives opportunity for so much of the most valuable kind of mental gymnastic' (J. Sime, *Lessing*, i. 251 f.).

3. Dramatic writings.—Lessing's dramatic works interest us here only in so far as they reflect his social and religious ideals. *Miss Sara Sampson*, the scene of which is laid in England, is a tragedy of middle-class life, interesting as a hint of the new day about to dawn on the German drama. *Minna von Barnhelm* is a charming study in human character, full of local colour and contemporary feeling, and presents its characters before a background of political significance.

The Seven Years' War ended for political reasons, and harmony of national sentiment did not immediately take the place of the bitterness which accompanied the conflict. *Minna von Barnhelm* made for true peace, whether Goethe was right or wrong in saying that it was the design of the play to effect by art a result which could not be achieved by diplomacy. 'The Saxon felt most painfully the wounds inflicted upon him by the proud Prussian.' In this play 'the grace and amiability of the Saxon ladies subdue the stolid character, the dignity, the obstinacy of the Prussians' (*Dichtung und Wahrheit*, Stuttgart and Tübingen, 1837, pt. ii. bk. 7). The play was of great importance, since its originality, and the breach which it made with contemporary imitation of French and English drama, stimulated the national consciousness and genius.

Nathan the Wise, a dramatic poem rather than a drama, secured Lessing's European fame. It saw the light first in 1779, but had long been planned. While Lessing declined to admit that his play contained allusions to the controversies in which he had been engaged with a Hamburg pastor, J. M. Götze, he declared that he would have nothing to say against the surmise that his purpose was to show how in olden time and in many lands, as among modern peoples, there have lived individuals who, though holding aloof from the religious systems of their age, were yet respectable and good; or against the conclusion that he intended to present such persons in a less repulsive light than that in which they had hitherto been regarded in Christian communities.

We cannot here detail the plot, but the idea of the play—and there is more idea than action—centres in the story of three rings in the possession of three sons of a dead man, one of them being the true heirloom, the others fraudulent imitations. The central characters of the play are a Christian, a Jew, and a Muslim. Nathan, the Jew, teaches what Lessing admitted was his own conviction, not, as some have supposed, that of the three religions one is true and the others false, the true to be discovered by observation of the results of each in the lives of its adherents, but rather the deep truth that, so long as Christians, Muslims, and Jews quarrel about their systems, the truth of religion (present in each) can never be discovered. When the power of the true ring has shown itself acting from within its owner, there will be nothing left to quarrel about. Creeds are accidents of birth and circumstances, but true religion is seen in character and action and must be the achievement of those who profess it.

Nathan the Wise was played in Berlin in 1783, but by indifferent actors. Only when Goethe and Schiller produced it at Weimar in 1801 did it take the place that it holds to-day in the repertory of the best German theatres. In it Lessing still teaches his lessons of toleration and broad-minded sympathy.

4. Literary and dramatic criticism.—In literary and dramatic criticism Lessing occupied an original standpoint and maintained it with brilliance and learning. His various contributions to periodicals and his *Literaturbriefe* ('Letters upon Current Literature') carried him into the arena already occupied, on the one side, by J. C. Gottsched, who blindly imitated the stilted masterpieces of the French, and therefore gave supremacy to formal standards, and, on the other, by the Swiss writers J. J. Bodmer and J. J. Breitinger, who insisted on the supreme importance of creative imagination. Lessing took up an independent position, criticizing both schools, though championing the main thesis of the anti-French school. From the frankest criticism of Gottsched, a renowned Leipzig professor, the young critic proceeded to the still more daring venture of criticizing Rousseau and Voltaire. In his *Hamburgische Dramaturgie* (published while he was 'critic' at the Hamburg Theatre and collected in 1769) he urged that the Greek dramatists and Shakespeare should be regarded as models, and he succeeded in severing the tie between German literature and the classic French school. In a brief but striking essay on 'How the Ancients represented Death' (*Wie die Alten den Tod gebildet*, 1769), Lessing maintained in reply to Klotz, who had criticized a remark in *Laocoon*, that the ancients represented the god of Death, not by the symbol of a skeleton, but by that of a boy, twin-brother of Sleep. He argued that skeletons represented the departed souls of evil men.

'It must presumably be our religion which has banished the ancient cheerful image of Death out of the realm of art. Since, however, this religion did not wish to reveal this terrible truth [that even natural death is the wages and fruit of sin] to drive us to despair, since it too assures us that the death of the righteous cannot be other than gentle and restoring, I do not see what should prevent our artists from banishing the terrible skeletons, and again taking possession of that other better image. . . . Only misunderstood religion can estrange us from beauty, and it is a token that religion is true and rightly understood, if it everywhere leads us back to the beautiful' (*Lessing's Prose Works*, Bohn's Library, 1879, p. 225 f.).

5. Theological opinions.—Lessing was always most powerful in the expression of his opinions when he was compelled to defend them against the traditionalist, whether of the literary or of the theological world. In addition to early Essays, 'The Origin of Revealed Religion' and 'Contributions to History and Literature' (containing essays on the theories of Leibniz), controversies in which he was engaged led to the publication of the following tracts: 'The Demonstration of the Spirit and of Power,' 'The Testament of John,' 'A Rejoinder' (*Ein Duplik*), and 'The Religion of Christ.' His chief theological controversy arose over papers that he published anonymously which were the work of H. S. Reimarus, who died at Hamburg while Lessing was there. These papers, which were transcripts from an essay left by Reimarus entitled 'An Apology for Rational Worshippers of God,' dealt with the questions of revelation, immortality in the OT, and the inconsistencies in the accounts of Christ's Resurrection. That they did not reflect adequately his personal views may be judged by his own words:

'What has the Christian to do with the hypotheses, the explanations, the proofs, of the theologian? The letter is not the spirit, and the Bible is not religion' (*Sämmtliche Schriften*, x. 14).

The foremost critic of these papers was Götze, head-pastor of Hamburg, whose utterances were the occasion of some of Lessing's most brilliant controversial writings. Lessing strenuously upheld the right of the intellect to discuss with perfect freedom all subjects, whatever their nature, which are of deep concern to mankind.

'If you could bring it about that our Lutheran pastors should become our popes; that they should have power to prescribe to us where we must cease to investigate Scripture, to put limits to our investigation and to our right of publishing the results; I should be the first to exchange the popelings for the pope' (*ib.* p. 161).

Lessing insisted on the distinction between Christianity and the religion of Christ:

'that which He Himself as a man recognised and practised, which every man may have in common with Him, which every man must wish to have in common with Him in proportion as the character ascribed to Christ simply as a man is sublime and lovely' (*ib.* xi. (2) 243).

In the dialogue entitled 'The Testament of John,' Lessing asks, 'Are not Christian love and the Christian religion the same thing?' (*ib.* x. 46). In his treatment of Biblical questions Lessing was very frank. He left it to others to write appreciations of the Bible, taking their results for granted. He himself set out to show that the Bible is not the only sustenance for man's spiritual life, and the suggestions which he threw out in the course of these controversial writings (which belong chiefly to the year 1778) led to those inquiries and researches which were only much later recognized as the legitimate studies of NT Canon and Early Christian History. Indeed, it was Lessing who first among the Moderns drew attention to the essential difference between the first three and the fourth Gospels (see the fragment, 'New Hypothesis concerning the Evangelists,' *Sämmtliche Schriften*, xi.).

Lessing's contributions to theological study were vividly summarized in a work consisting of a hundred propositions and entitled 'The Education of the Human Race' (*Die Erziehung des Menschengeschlechts*, 1780). Humanity is represented as passing through three stages of education. The first is that reflected in its school-book, the OT. We see there the gradual development from the worship of a patriarchal and local deity to that of one God, and the transition from the ethics of a virtue which is dependent on rewards and punishments in this life to the doctrine of the immortality of the soul, to learn which the Hebrew people had been 'sent abroad' to Babylon. The second is that in which Christ taught the eternal sanctions of righteousness in place of immediate retribution, and the NT is the school-book of this stage. Before the third stage is reached, revealed truths are to be transformed into truths of reason.

'It will come, the time of consummation, when man, however firmly his mind is convinced of an ever better future, will yet have no need to borrow motives for his conduct from that future. For he will do what is right because it is right, and not because arbitrary rewards are attached to it, which were merely intended to attract and strengthen his wandering attention, so that he might recognise its inward and better rewards. It will certainly come, the time of this *new eternal Gospel*, which is promised us already in the elementary books of the New Covenant' (Proposition 85 f.).

After remarking that each individual human being must first traverse the ground along which the race advances towards its perfection, he meets the objection that in one and the same lifetime a man cannot pass through all the stages, making the interesting, and at that time novel, suggestion of pre-existence (see Propositions 93–100). This little treatise is closely related to *Nathan the Wise* in its teaching of the relative worth of different religions, and in its insistence that each is fitted for a particular race and epoch and that none can claim supremacy over all the others.

6. Political opinions.—In *Ernst and Falk, Dialogues for Freemasons* (*Gespräche für Freymäuer*), published without his permission in 1780, Lessing expresses his views of society, devoting but little space to freemasonry, which should, he says, overcome all distinctions of caste and fortune, of nationality and religion. He admits a preference for natural life as opposed to the social state.

Speaking of ants, he says: 'What activity and yet what order! Everyone carries, drags, and pushes, and not one is a hindrance to the rest. See, they even help one another; . . . they have no member that holds them together and rules them; . . . each individual is able to govern himself' (*Sämmtliche Schriften*, x. 257).

But at the same time he recognizes that the good of individuals depends at present on a certain degree of organization. With no uncertain courage, considering the circumstances of the age, Lessing insists on the basis of social life in the needs and satisfactions of individual life.

'States unite men that through and in this union every individual man may the better and more surely enjoy his share of welfare. The total of the welfare of all its members is the welfare of the state; besides this there is none. Every other kind of welfare of the state, whereby individuals suffer and must suffer, is a cloak for tyranny. . . . As if nature could have intended the welfare of an abstract idea, State, Fatherland, and the like rather than that of each individual' (*ib.* x. 258).

LITERATURE.—i. Works.—*Sämmtliche Schriften*, ed. K. Lachmann, 13 vols., Berlin, 1825–28; re-edited W. von Maltzahn, Leipzig, 1853–57; and re-edited F. Muncker, 21 vols., Stuttgart, 1886–90; *Gesammelte Werke*, 6 vols., Leipzig, 1912.

ii. Translations.—*Selected Prose Works of G. E. Lessing* (*Laocoon, How the Ancients represented Death*, and *Dramatic Notes*), tr. E. C. Beasley and H. Zimmern, London, 1879; *Lessing's Laocoon*, tr. E. C. Beasley, do. 1887; *Laocoon and Other Prose Writings*, tr. and ed. W. B. Rönnfeldt, do. 1895; *Laocoon*, tr. with introd. R. Phillimore, do. 1905; *Lessing's Dramatic Works*, ed. E. Bell, 2 vols., do. 1879; *Plays of Lessing* (*Nathan the Wise, Minna von Barnhelm*), tr. R. D. Boylan, ed. E. Bell, do. 1888; *Nathan the Wise*, tr. with introd. R. Willis, do. 1867; *Nathan the Wise*, tr. E. Frothingham, New York, 1868; *Cambridge Free Thoughts and Letters on Bibliolatry*, tr. from German of G. E. Lessing by H. H. Bernard, London, 1862; *The Education of the Human Race*[4], tr. F. W. Robertson, do. 1896.

HAROLD E. B. SPEIGHT.

LETTERS CELESTIAL AND INFERNAL.—With the development of writing the belief arose that the gods themselves kept records of their proceedings, and thus among the Egyptians Thoth was the scribe of the gods (A. Wiedemann, *Religion of the anc. Egyptians*, London, 1897, pp. 227 f., 248), while the Indians believed Brahmā to be a writer god (cf. *Vāsavadattā*, tr. L. H. Gray, New York, 1913, p. 115), particularly the deity who writes the fate of each mortal on the individual's forehead (*brahmarekhā*).

As a natural corollary it was thought that the gods could communicate their will to man by written as well as by spoken words.

In the Egyptian *Book of the Dead*, the rubric of ch. xxx. b. states that 'this chapter was found in the city of Khemennu [Hermopolis Magna] under the feet of [the statue of] this god. [It was inscribed] upon a slab of iron of the south, in the writing of the god himself, in the time of . . . Men-kau-Rā [of the IVth dynasty] . . . by the royal son Ḥeru-ṭā-ṭā-f' [son of Cheops, the builder of the Great Pyramid] (*Book of the Dead*, tr. E. A. W. Budge, London, 1901, p. 151; cf. 221 f., 418).

In some forms of revelation the document is written in heaven by the deity. This is notably the case with the Decalogue (Ex 24^{12} 31^{18} $32^{15f.}$ $34^{1.\ 28}$, Dt 5^{22} 9^{10} $10^{2.\ 4}$), and the archetype of the Qur'ān is written 'on the preserved table' (*fī lauḥⁱⁿ maḥfūẓⁱⁿ*, lxxxv. 22; cf. also xiii. 39, xcvii. 1), the word for 'table' (*lauḥ*) being the one employed also in reference to the tables of the Ten Commandments (vii. 142, 149, 153; cf. the equivalent Heb. לוּחַ, Ex 24^{12} etc.). Mention is likewise made in the Bible of books sent down from heaven and eaten by Ezekiel and St. John the Divine, who then prophesied the contents of the volumes (Ezk $2^{9ff.}$ Rev $10^{8ff.}$). Similarly, in the Book of Mormon an angel gives Lehi a book foretelling the Babylonian Captivity (1 Nephi $1^{11ff.}$). According to the *Zôhar*, Adam, while yet in Eden, received from God a book containing, in 670 writings, the 72 sorts of wisdom, and giving the 1500 keys of knowledge—matters which were unknown even to the angels. Adam consulted this book daily till he was driven from the Garden, when it flew away from him. In pity for his grief, God caused it to be restored to him, and it was in the possession of his descendants until Abraham (J. E. Eisenmenger, *Entdecktes Judenthum*, Königsberg, 1711, i. 375 f., ii. 675).

The sacred book of the Elkesaites was believed to have fallen from heaven (Eus. *HE* vi. 38), or, according to another version, to have been brought from heaven to Elkesai by a gigantic angel (Hippol. *Refut.* ix. 8; see *ERE* v. 263ᵃ).

The belief may, however, be traced much farther back. Towards the end of the 3rd or during the 2nd cent. B.C. Menippus, a Syrian from Gadara, inaugurated the *genre* of the 'Menippean satire.' Among his productions were *ἐπιστολαὶ κεκομψευμέναι ἀπὸ τοῦ τῶν θεῶν προσώπου* (Diog. Laert. VI. viii. 101), and Dieterich (*Kleine Schriften*, p. 244) suggests that the non-Greek phrase *ἀπὸ τοῦ τῶν θεῶν προσώπου* may be a reminiscence of a Heb. מִפְּנֵי אֱלֹהִים. It may have been these compositions that gave another Semite, Lucian of Samosata, the inspiration for his 'Letters of the Gods.' Servius (*ad Æn.* vi. 532) mentions a certain Tiberianus who 'inducit epistolam vento allatam ab antipodibus, quae habet superi inferis salutem,' and Pausanias (X. xxxviii. 7) records that Æsculapius sent the poetess Anyte to Naupactus, bearing a sealed tablet given her by the god, to heal Phalysius, who was well-nigh blind, but who, obeying the divine command to read the tablet, received full vision again. Other instances of more doubtful interpretation might be cited, as, *e.g.*, Juvenal's phrase (xi. 27), 'e caelo descendit *γνῶθι σεαυτόν*,' although here the most obvious meaning is that Chilon was divinely inspired with the maxim, not that a missive inscribed '*γνῶθι σεαυτόν*' was wafted to him from the sky.

Within Christianity one of the earliest mentions of a celestial letter occurs in the 23rd Ode of Solomon (tr. J. H. Bernard, *TS* VIII. iii. [1912] 97 f.; probably second half of the 2nd cent. A.D.), in which the decree of the Most High descends in a letter 'like an arrow which is violently shot from the bow.' It was 'a great Tablet, which was wholly written by the Finger of God.' The contents of this letter were apparently Mt 28^{19}. In the Ethiopic Acts of Peter the apostle receives from Christ books 'written with His own hand . . . wherein were written the mysteries which the tongues of the children of men are neither able to utter nor to understand with their hearts, except those whose hearts are arrayed in the strength of the gracious gift of baptism' (tr. E. A. W. Budge, *Contendings of the Apostles*, London, 1899–1901, ii. 469–471). In the 4th cent. Georgian Life of St. Nino (tr. M. and J. O. Wardrop, *Stud. Bib. et Eccles.* v. 1 [1900]) the saint receives, in vision, a book from a divine visitor, its contents being Mt 26^{13}, Gal 3^{28}, Mt 28^{19}, Lk 2^{32}, Mk 16^{15}, Mt $10^{40.\ 28}$, Jn 20^{17}, and two other sentences—all apparently being selected to promote Montanistic teachings.

To the category of celestial letters belongs the very interesting 'letter for hallowing Sunday,' whose history may be traced at least to the 6th cent., and which has spread, despite many efforts to check it, throughout both Western and Eastern Christendom. Although much study has already been devoted to this letter, its history is by no means clear. Its general character is thus summarized by Delehaye (*op. cit. infra*, p. 174):

'La lettre est écrite par le Christ lui-même, en lettres d'or ou avec son sang. Elle est portée sur la terre par l'archange Michel, ou bien elle tombe du ciel, à Rome sur le tombeau de saint Pierre, à Jérusalem, à Bethléem ou en d'autres lieux célèbres, suivant l'occurrence. Son objet principal est d'enculquer l'observation du dimanche. Subsidiairement, d'autres préceptes y sont recommandés. Vient ensuite une série de menaces terribles contre ceux qui mépriseront ces ordres, et assez souvent une vive protestation destinée à rassurer les chrétiens qui concevraient des doutes sur l'authenticité du document. Ordinairement, le texte du message divin est encadré d'un prologue racontant les circonstances de la promulgation, et d'un court épilogue.'

The principal specimens of this letter are as follows:

(*a*) Latin: J. A. Fabricius, *Codex apocr. Novi Testamenti*², Hamburg, 1719, i. 308–314; J. P. Migne, *Dict. des apocryphes*, Paris, 1856–58, ii. 367–369; Delehaye, 179–185.

(*b*) Anglo-Saxon: Four homilies are edited by A. S. Napier in *Wulfstan*, Berlin, 1883, a fifth by him in *Eng. Miscellany presented to Dr. Furnivall*, Oxford, 1901, pp. 355–362, and a sixth has been published by R. Priebsch in *Otia Merseiana*, i. (Liverpool, 1899) 129 ff.

(*c*) Middle English: John Audelay's poem is edited by R. Priebsch in *Eng. Miscellany*, 397–407.

(*d*) German: Delehaye, 191–193; Dieterich, 234–237, 248 f.; A. Wuttke, *Deut. Volksaberglaube*³, Berlin, 1900, p. 178 f.; L. Strackerjan, *Aberglaube und Sagen aus dem Herzogtum Oldenburg*, Oldenburg, 1868, i. 59 ff.; K. Bartsch, *Sagen, Märchen und Gebräuche aus Mecklenburg*, Vienna, 1879–80, ii. 341 ff.; U. Jahn, *Hexenwesen und Zauberei in Pommern*, Breslau, 1887, p. 40 ff.; F. Closener, *Strassburgische Chronik*, Stuttgart, 1842, pp. 89–95; *Chroniken der oberrhein. Städte*, Strassburg, i. (Leipzig, 1870) 111–116; M. Haupt, *Altdeut. Blätter*, ii. (do. 1840) 241–264.

(*e*) Icelandic: J. Arnason, *Íslenzkar þjóðsögur og æfintyri*, Leipzig, 1861–64, ii. 53–55.

(*f*) French: Delehaye, 194–196; an unedited O. Fr. text is mentioned by Priebsch, *Eng. Miscellany*, 397.

(*g*) Celtic: E. O'Curry, *Lectures on the MS Material of anc. Irish Hist.*, Dublin, 1861, p. 663 (referring to *Leabhar Lecain*, do. 1896, col. 217); P. W. Joyce, *Soc. Hist. of anc. Ireland*,

London, 1903, i. 386 f. (referring to *Leabhar Breac*, Dublin, 1876, pp. 202–204); Welsh 'Ebostul y Sul,' in *Y Cymmrodr*, viii. [1887] 162 f.

(*h*) Slavic: Vesselovsky, *Journ. Ministry of Public Instruction*, clxxxiv. [1876] 50–116 (Russ.).

(*i*) Greek: A. Vassiliev, *Analecta Græco-Byzantina*, Moscow, 1893, pp. 23–32, xiv–xx.

(*j*) Ethiopic: F. Praetorius, *Mazhafa Tomar, das äthiop. Briefbuch*, Leipzig, 1869; R. Basset, *Apocryphes éthiop. tr. en français*, ii., Paris, 1893.

(*k*) Oriental in general (Greek, Armenian, Syriac, Karshuni, Arabic, Ethiopic, and Hebrew): M. Bittner, 'Der vom Himmel gefallene Brief Christi in seinen morgenl. Versionen und Rezensionen,' *DWAW*, 1905.

The earliest known mention of the 'Sunday letter' is its condemnation, as a diabolical forgery (*diaboli figmentum*), by Licinianus, bishop of Carthage, towards the end of the 6th cent.[1] (*Ep. ad Vincentium* [*PL* lxxii. 699 f.])—a condemnation which was repeated at the Lateran Council of 745 (J. D. Mansi, *Sacrorum conciliorum . . . Collectio*, xii. [Florence, 1766] 384*p*). Originally the letter emphasized the keeping of Sunday, but later it came to insist on other duties as well. It often concluded with maledictions on the disobedient and unbelieving, but some specimens also contain a benediction on those who do its bidding (Delehaye, 185; *Eng. Miscellany*, 362, 404, 406 f.). Peter the Hermit carried with him a 'chartulam de caelo lapsam,' and the Flagellants of the 14th cent. also claimed to possess 'letters from heaven' (Delehaye, 187, 189), some of these alleging that 'the Lord God deprived the Roman Pope, all bishops, prelates, and priests of all authorities.

With the addition of a blessing for obeying the commands of the heavenly letter the way was opened for what is to-day the most important function of the epistle—its use as an amulet to ward off all harm. The origin of the apotropæic aspect of the 'heaven letter' is obvious, but cannot be supported at present by documentary evidence. A Swiss letter of, at latest, the early 16th cent. (Dieterich, 248 f.), purporting to be that which 'bapst leo kunig karolo von himmel sant,' promises to gain honour and prosperity for its bearer and to protect him against enemies, death by water or fire, and false witnesses, to bring a travailing woman to happy delivery, and to keep the whole house from injury. This particular text does not mention the Sunday law, but in another, of 1604 (Delehaye, 191 f.), the mandatory and apotropæic functions are combined. The letter is still a favourite amulet among the German soldiery, and is also used for general protection of person and house (Dieterich, 240, 249 f.). It is also found among the Slavs (E. Kozac, *JPTh* xviii. [1892] 155).

The origin of the wide-spread 'Sunday letter' is, as Delehaye has conclusively shown (207 ff.), the West, not the East, and, in all probability, Africa or Spain (the latter country being the more likely, since Vincentius, to whom Licinianus wrote, was bishop of Iviza, in the Balearic Islands).

The counterpart to the 'heaven letter' is the 'hell letter.' Apart from a cursory mention by T. Trede (*Wunderglaube im Heidentum und in der alten Kirche*, Gotha, 1901, p. 257) of a letter written by Satan and preserved in Girgenti, however, no instance of an infernal epistle seems to be recorded. On the other hand, letters to the infernal gods are known from classic times (Dieterich, 251). In the 14th and 15th centuries a number of epistles were ascribed to Satan, but these were solely satirical in purpose (see W. Wattenbach, 'Über erfundene Briefe in Handschriften des Mittelalters,' *SBAW*, 1892, pp. 91–123, and for an admirable specimen *ib.* 104–122).

[1] This date may be carried back to the early 4th cent., and to the East, if the Coptic exhortation to Sunday-hallowing by Peter of Alexandria († 311) be genuine. Even so, however, the origin of the 'Sunday letter' seems, from internal evidence, to be Occidental, not Oriental. On this letter of Peter see C. Schmidt, 'Fragmente einer Schrift des Märtyrerbischofs Petrus von Alexandrien,' *TU* II. v. 4b [1901]), and Delehaye's review in *Analecta Bollandiana*, xx. [1900] 101–103. It may be remarked, moreover, that the association with Peter the Apostle, as in the letter of Licinianus, would naturally be the oldest, and that from him the transfer to Peter of Gaza, Antioch, or Nimes was made later.

LITERATURE.—In addition to the works mentioned in the art. see I. F. Knorrnn, *Diss. . . . de libris et epistolis cælo et inferno delatis*, Helmstedt, 1725; H. Delehaye, *Bull. de la classe des lettres . . . académ. roy. de Belgique*, III. xxxvii. [1899] 171–213; A. Dieterich, *Kleine Schriften*, Leipzig, 1911, pp. 234–251; K. Abt, 'Von den Himmelsbriefen,' *Hessische Blätter für Volkskunde*, viii. [1909]; T. O. Radlach, 'Zur Lit. und Gesch. der Himmelsbriefe,' *Zeitschr. des Vereins für Kirchengesch. in der Provinz Sachsen*, v. [1908] 238–248; R. Priebsch, *Diu vrône botschaft ze der christenheit*, Graz, 1895; V. G. Kirchner, *Wider die Himmelsbriefe*, Leipzig, 1908; W. Köhler, 'Himmels- und Teufelsbriefe,' *Religion in Gesch. und Gegenwart*, iii. (Tübingen, 1912) 29–35. Many German specimens are given in such periodicals as *Schweiz. Archiv für Volkskunde*, *Hessische Blätter für Volkskunde*, etc.; see also above, p. 761a.

LEUCIPPUS.—See DEMOCRITUS.

LEVI BEN GERSHON.—1. Life and influence.—Levi ben Gershon, familiarly known in Hebrew literature as Ralbag, from the initials of his name, called also Gersonides, Leon de Bagnols, Magister Leo de Bannolis, and Magister Leo Hebræus, Jewish philosopher, exegete, mathematician, and astronomer, was born in Bagnols (S. France) in 1288, and died on April 20th, 1344. Levi lived at Orange and at Avignon, where it is supposed that he practised as a physician. His life fell in a period when discussion raged furiously between the followers of tradition and those who read their philosophical conceptions into the text of Scripture. Levi belonged to the latter class, and, though under the influence of the great Stagyrite and his Arabic interpreter, Averroes, he was not afraid to criticize them—just as he was sufficiently open-minded to differ from Ptolemy in matters of astronomy.

He was, like most of the great scholars in the Middle Ages, a polyhistor; but his interest in Jewish theology, as well as his studies in metaphysics, accentuated his occupation with many of the exact sciences. Just as Aristotelian theories regarding the spheres and the stars as the virtual intermedium between the Deity and man made a study of astronomy necessary, so did occupation with questions concerning the Jewish calendar necessitate a knowledge of both mathematics and astronomy. Of Levi's life we know very little; but its end must have been darkened by the clouds that hung over his people and led him to compute the Year of Redemption to be 1358, and to write horoscopes for the years 1343 and 1344.

In Hebrew literature Levi's chief influence was as a philosopher and Bible commentator. He was the first after Maimonides to present to his fellow Jews a complete system of philosophy; and, while he found many followers, his comparative freedom from the fetters of tradition evoked strong opposition. Ḥasdai b. Abraham Crescas († 1410) severely criticized his philosophical deductions; and he was decried as unorthodox by such writers as Isaac b. Sheshet († 1408), Abravanel (1450), Shem Ṭob b. Shem Ṭob (1461), Messer Leon (1475), Elias Delmedigo († 1497), and Manasseh b. Israel (1627). Indeed, in 1546 it was dangerous to print his chief work on philosophy. But the opposition which he aroused is proof that he was widely read. His influence extended outside his own circle. Spinoza adopted his theories regarding miracles; Pico de Mirandola praised his astronomical treatise,

part of which Pope Clement VI. (1342) ordered to be translated into Latin; and he is mentioned by Reuchlin and Keppler. Further, he was the real discoverer of the *baculus*, or 'Jacob's Staff,' an instrument for measuring angles and distances on the earth and in the spheres—a discovery which has been attributed to Regiomontanus. He also invented the *camera obscura*, in order to be able to find out the relation of the radii of the sun and the moon to the radius of a circle, to measure the size of the eclipse of these two bodies, and to ascertain the relation of the diameter of the whole body to that of the part obscured. He laid down these results in his *Luḥôth ha-tᵉkunnāh* ('Astronomical Tables'), incorporated in the fifth part of the *Milḥămôth*. This was 200 years before Leonardo da Vinci and Porta.

2. Philosophy.—Levi's philosophical system is contained in his *Milḥămôth Adhônai* ('Wars of the Lord,' Riva di Trenta, 1560, Leipzig, 1856). His controversy with Maimonides centred about the creation of matter and the immortality of the soul. In order to posit God's interference in natural phenomena and to form a basis for the existence of miracles, Maimonides had denied the eternity of matter, while he had not proved the possibility of individual immortality. Levi held opposite views; but, in order to justify his standpoint, he found it necessary to explain the physical and metaphysical theories upon which his idea of the co-eternity of matter with God was based. The *Milḥămôth*, which is in six parts, covers the whole ground of natural philosophy, metaphysics, and theology in the following order: theory of the soul; prophecy; God's omniscience; providence; astronomy, physics, and metaphysics; Creation and miracles.

According to Levi, the basis of human intellect is in reality the imaginative soul, something akin to the animal soul. This human intellect is moved to action by the universal intellect; when joined to the acquired ideas and conceptions, it becomes the acquired intellect. This acquired intellect is made up of universals; and Levi holds, with the realists, that such universals have a real existence. It is therefore possible that the acquired intellect may continue to exist after death, thus affording us a philosophical basis for the theological doctrine of the immortality of man. In a similar manner he lays the foundation for the belief in prophecy by connecting the rational faculty in man, which then comes into play, with the universal intellect. Prophecy is thus differentiated from divination, in which the imaginative power in man is, so to speak, the receiving instrument, and to whose workings no certainty can be attached. Maimonides had based his theory upon the imaginative side of the human mind and upon the will of God, without attempting to explain the psychological process. Levi, on the other hand, demands moral as well as intellectual perfection in the prophet.

There are three grades of superhuman forces—the planetary intelligences, the active intellect, and the primary cause of all, God. God's existence is proved by the phenomena of creation; and His oneness is deducible from the evident hierarchy in the forces that move the universe. The planetary intelligences are made up of the spirits of the stars, which are to be thought of as immaterial bodies swinging in recurring periods in the world harmony. There are forty-eight such sphere intelligences and eight astral ones, corresponding to the forty-eight spheres and the eight planets. No one of the sphere intelligences can be—as Averroes supposed—the primary cause, since they affect a part of the universe and not the whole. In contradistinction to Aristotle, Levi holds that the world had a beginning, since neither matter nor motion is infinite; but, like the heavenly bodies, it has no end. At creation, matter was inert and undetermined. Form and various attributes were given to it by God, but the diverse separate intelligences proceeded directly from the Divine Being. Miracles do not proceed from the Deity, but from the active intellect. Natural laws are of two kinds: those governing the heavens, upon which sublunary phenomena are dependent, and those governing the active intellect. Miracles are natural events, and are meant to act as a counterpoise to the inflexibility of the celestial bodies. According to Levi, there is a definite analogy between the knowledge of God and that of man; but there is a clear distinction to be made between them. God's knowledge extends over all the cosmic laws of the universe, and over the influence exercised upon sublunary things by the celestial bodies; but He does not know the details of what happens in the sublunary world. This explains the possibility of the freedom of the will, which does not in any way derogate from God's omniscience or imply any imperfection in Him, as He knows all that is essential.

God's providence does not extend to every individual, as Maimonides had supposed; nor does it deal only with mankind as a whole—the theory of Aristotle. Levi strikes a middle course, and holds that some human beings are under a general providence, others under a special, and that the quantity of special providence meted out to any individual is in direct relation to the scale in creation which he has reached—*i.e.*, to the degree of nearness to the active intellect attained by him. The solicitude of this special providence, appreciated only by beings of the highest perfection, manifests itself in a warning to avoid evil influences emanating from the celestial bodies, all of which are regulated by eternal laws known to the Deity.

These philosophical and metaphysical doctrines are found again in Levi's commentaries on various books of the Bible, written between the years 1326 and 1338—notably in those on the Pentateuch and the Former Prophets—and they have even been excerpted and published in separate form under the title of *Tôʿălīyôth* (Riva di Trenta, 1550–64). In addition to these he wrote comments on Job, Daniel, Proverbs, Canticles, Esther, Ecclesiastes, and Ruth. Levi's explanations are quite consciously two-faced. He is perfectly well aware of the literal meaning of the text, which he explains with lucidity and clearness, following in many cases Ibn Ezra; even miracles, *e.g.*, he explains in a natural sense. But behind this literal meaning he sees a philosophical and historic sense, which he deduces out of the text with great skill. He also finds his scientific principles rooted in the Bible—on the theory that all knowledge is one, the separate parts of which cannot contradict each other.

This philosophic bent of mind is likewise seen in his works on pure science. He believed himself to be an absolute rationalist, and held that no problem was insoluble to man. He even dared to explain geometric axioms. His work on arithmetic (*Maʿăsēh Ḥôshēbh*) differs from that of Ibn Ezra, which may be said to be dogmatic and mechanical, in that it attempts to build up a theoretic system founded upon an algebraic basis taken from the elements of Euclid. The same spirit is shown in his tract *de Numeris harmonicis*, dealing with a question in algebra put to him by Philip of Vitry, Bishop of Meaux. Levi was also one of the first writers in Europe to study trigonometry, and he worked out a commentary on the first five books of Euclid.

His views on astronomy are, of course, the integral part of his general system of philosophy, and are largely contained in the fifth section of his *Milḥāmôth*. Here again he shows his freedom of judgment. He is not afraid to criticize both Alpetragius (al-Bitruji) and Ptolemy. He takes into consideration a system akin to that of Copernicus, but only to reject it as quite impossible. According to Levi, the various movements of a star depend upon more than one sphere, so that the number of the heaven-circles equals the number of all these movements. Each planet also belongs to several spheres—which accounts for the complicated courses of the stars. Yet he is not satisfied with so simple a statement, the current mysticism of his day leading him to seek a deeper meaning in these movements. The object of the stars, he says, is to exercise an influence here on earth in order to make good the evident incompleteness of earthly things. This influence, however, is not plenary; man's freedom of will can break through the causal nexus of the dominance of stars, and the higher a man ascends in the scale of humanity the greater is his power to overcome this influence. Levi is thus a firm believer in astrology, the existence of which, he says, 'no one can doubt.' The light of the sun warms the earth because there is some secret connexion between the sun and the element of fire which is not possessed by the other heavenly lights.

3. Appreciation.—Levi's method is, in all cases, first to state the opinions of his predecessors, to criticize these opinions, and then to state his own view. It is significant that the first work that he wrote was one on logic, in which he reviews Averroes' interpretation of the *Analytics* of Aristotle. His general position can be stated best in his own words:

'If thought carried us to a conclusion which does not seem to result from the simple wording of Holy Writ, we would still have no scruple to speak the truth; for to do this would not run counter to Biblical ethics, which cannot ask us to believe that which is false.'

He must not in any way be considered as a sceptic; he found means to harmonize the truth, as he saw it, with received tradition. Nor did he in any way care for the applause of the multitude, though he did believe that some subjects were not fit for discussion. Indeed, he says on one occasion:

'By God, it is the intention of the author to hide his words from the crowd, in order to be understood only of the few, and to do no harm to others.'

In view of this, it seems impossible to hold, as some have done, including Curtze, Cantor, and Günther, that, very late in life, Levi became a convert to Christianity. The basis for this view is found in some expressions in the dedication (in 1342 to Pope Clement VI.) of the Latin translation of a part of the chapters on astronomy contained in his *Milḥāmôth*. But there was no need to adopt such a course in Avignon, where the Jews were treated by the popes with conspicuous kindness. All Levi's writings exhibit a strong Jewish feeling, and none of his literary and philosophic opponents mentions the charge. Carlebach suggests rightly that this dedication must have been composed for him by some one else, who wrote what he pleased, as Levi was unacquainted with Latin.

RICHARD GOTTHEIL.

LIBERAL JUDAISM.—The changes in thought which marked the close of the 18th cent. and so powerfully affected the course of the 19th did not pass without influencing Judaism. Moreover, the external barriers between the Jews and the rest of the world were broken down by the changes which preceded and followed the French Revolution, and the problem arose as to the harmonization of the new social life with the old religious institutions. These two causes, the intellectual and the social, have not always had the same relative importance; sometimes the one, sometimes the other, has predominated. But they have not been isolated, because the two are essentially related. The social changes in the position of the Jews were bound up with the modification of the European intellectual outlook. Those who have led the liberal Jewish cause have mostly been the intellectually and socially 'emancipated'—those, in short, who have most deeply felt the consequences of the altered attitude of men in general towards the problems of thought and of intercourse.

There has been nothing in the nature of schism, because, on the one hand, there has been no established synagogue (see HERESY [Jewish]), and, on the other, the leaders of the new movements have invariably been animated with a strong loyalty to the common cause of Judaism. But from time to time these new movements have been distinctly marked off from the older Judaism by less reliance on tradition. The earlier Reform in Judaism was an attempt to re-state Judaism in the light of the new Jewish learning, which did so much to promote the 'higher criticism' of the Talmud. It was seen that the Rabbinic Codes were the result of growth, that they had a history which, while it made them more interesting as expressions of the progressive life of Jewry, necessarily undermined their authority as unalterable norms. The older Rabbinic Judaism had made far fewer claims to the permanent validity of traditional forms than did the conservative Judaism of the 16th, 17th, and 18th centuries. In the Jewish life of the 18th cent. there were many customs—ritualistic and social—which, in the light of historical criticism, were seen to be of very various date and significance. Reform, accepting this criticism, busied itself with the valuation of traditions, establishing or accepting the validity of some and not of all. More and more, too, the conception became firmly formed—though there are at the present day some 'liberals' who are also 'Zionists'—that the Jews were not a nation but a religious community, and that, while the maintenance of the synagogue as an independent organization was absolutely essential for the vitality and continued existence of Judaism, yet it was imperative to find as a basis for the maintenance of independence other means than the retention of separative customs.

The course of Reform in Judaism thus became in part a matter of detail. Some of these details were of small significance, such as the question whether to pray with covered or uncovered heads. But others were of greater importance. One of these was the position of women. Woman always occupied a high position in Jewish esteem (see I. Abrahams, *Jewish Life in the Middle Ages*, London, 1896, ch. v.). But the Reform movement tended to express this esteem of woman by admitting her more fully to congregational equality with men. Another detail was the question of language. The first effective Reform movement occurred in Germany; Moses Mendelssohn—who, however, belongs to the history of Reform only in a special sense—wrote three sermons in German in 1757 on the occasion of the victories of Frederick the Great. Vernacular sermons had been in regular vogue much earlier (L. Zunz, *Die gottesdienstlichen Vorträge der*

Juden[2], Berlin, 1892, pp. 424–496). But, in the centuries preceding the age of Reform, sermons were rare in synagogues, being usual only twice a year, and then the language employed by the preacher was either some form of Hebrew or a dialect, such as Yiddish. The establishment of regular sermons in the pure vernacular and the fuller organization of religious education for the young, especially as regards girls, are among the most important changes which the modern conservative synagogue owes to the liberals. Again, the introduction of the organ and the employment of vernacular prayers and hymns were further stages in the Reform movement (1810), which, on the whole, sought to 'æstheticize,' or, as some have ineptly expressed it, to 'de-orientalize,' the synagogue services.

But there was a deeper principle at work, and, as time went on, the Reform movement, attaching itself to such views as that of Maimonides that the Pentateuchal sacrificial system was a concession to the weakness of early Israel, sought to remove the liturgical prayers for the restoration of the sacrifices and also for the physical resurrection and return to Palestine, without, however, surrendering the belief in immortality and in the Messianic Age. Liberal Judaism has always tended to a firm grasp of Messianism, in the form of a belief in the perfectibility of human nature, of a steady advance towards that end, and of the ultimate conversion of the world to monotheism, and the establishment of the universal Kingdom of God.

Much anxiety was presented by the Saturday Sabbath, and since the beginnings of Reform the problem has grown in difficulty. Economic pressure among the working and professional classes, as well as laxity and assimilation among the more wealthy and leisured circles, has led to a weakening of the seventh day sabbatical rule among conservatives as well as among liberals. No real solution has been found, for, while Sunday services have been established in some liberal Jewish congregations of Germany and America, there has been very little desire or attempt to transfer the Sabbath from Saturday to Sunday.

Reform in Judaism entered on a new and more fertile phase under the inspiration of Abraham Geiger (1810–74). He was one of the leading representatives of the new learning—of the 'science' of Judaism, to use the phrase often applied to it. His writings were of great significance; indeed, his *Urschrift* (Breslau, 1857) is a work which is becoming more and more appreciated as a contribution to Biblical and historical criticism. But, though Geiger was possessed of a 'historical temper'—to use E. G. Hirsch's phrase—he did not, as the 'Breslau' school of Jewish thought tended to do, separate his criticism from his creed. Just because he conceived of Judaism not as a given quantity but as a process (*JE* v. 586), Geiger recognized the necessity of making that process harmonious. His whole struggle for Reform was based on his sense that thought and religion must be syncretized, not put into separate compartments. Some very sincere and very great Jews of the Breslau School were able to discriminate between intellectual and practical freedom, but Geiger could not arrive at critical results in his study and go on with religious conformity as though nothing had happened to compromise the sanctions on which conformity was based. The same attitude towards sanctions and their influence on life is at the root of the liberal Judaism of our own time.

Parallel with this was the conviction among certain Reformers that it was necessary to return to the Bible in order to purge Judaism from Rabbinism. This tendency was shown in the discussions of the French Sanhedrin, summoned by Napoleon in 1806. So, too, when the first Reform synagogue was opened in England (1842), the authority of the 'Oral Law' was repudiated, while, as D. W. Marks, the minister of the new congregation, put it, in his sermon published on the occasion, 'for Israelites there is but one immutable law, the sacred volume of the scriptures, commanded by God to be written down for the unerring guidance of his people until the end of time.' Similarly, Isaac M. Wise (1819–1900), the great organizer of Jewish Reform in the United States of America, and the founder of the famous Hebrew Union College of Cincinnati, strenuously maintained the older view of Biblical inspiration; to the end of his life he upheld the Mosaic authorship of the Pentateuch, as in his *Pronaos to Holy Writ* (Cincinnati, 1891). But this easy discrimination between 'Mosaism' and 'Rabbinism' was not tenable when the newer Biblical criticism affected the synagogue. Geiger had been a 'higher critic' not only of Rabbinism but also of Mosaism. Similarly, Zunz (1794–1886) was not only a pioneer in the criticism of the Midrash; he was also a leader in the criticism of the Biblical text which the Midrash expounded. For some time, however, a half-way house was built by those who, while firmly holding by the authority of the Bible, denied the authority of tradition. But the house constructed with so much care proved an ephemeral lodging for the new Judaism. And this for two reasons. Whereas the older confident view as to Biblical authority was undermined, the newer repudiation of tradition was equally felt to be ill-founded. Mystical theories, not always consciously recognized as mystical, have invaded all forms of religion, and Judaism at present is much infected by mystical conceptions. Liberal Judaism, feeling itself bound to assert that not all the Bible is of God, became equally assured that not all the tradition is of man. It believes in a spiritual continuity of the ages, and regards the whole of the Jewish revelation as a spiritual experience, which links together all generations of Jews, including the present generation. It is not, however, necessary to insist on this way of describing what has happened. It can be expressed rationally by the assertion that criticism has tended to prove that, just as documents grew up from traditions, so traditions may have the validity of documents. Hence it is becoming usual now to speak of 'liberal Judaism,' whereas in former generations the favoured term was 'Reform Judaism.' Liberal Judaism in a real sense bases itself on the Scriptures. It may be described in general terms as a direct resumption of the prophetical Judaism. But it regards the Talmud as often a real advance in religious and ethical teaching, and therefore has the warmest affection for the Talmud as the expression of certain important aspects of the Jewish genius. Thus liberal Judaism, though necessarily denying the validity of any book whatever as a final authority in religion, is strongly placed by its very power of eclecticism. It has not yet formulated a precise theory as to its relation to the idea of Law. But it is coming to accept the theory of progressive revelation in a manner which must eventually become interpretable in objective, communal, and therefore more or less legalistic, terms.

It is unnecessary to discuss more fully the tenets of liberal Judaism, because in most fundamental principles it is at one with conservative opinion. Liberal Judaism shares the belief in the absolute unity of God, in the revelation of God to man, in human responsibility, in immortality, in the call of Israel to teach the universal Fatherhood of God, in the pragmatic sufficiency of righteousness for salvation to all men despite differences of creed

and in the ultimate triumph of right throughout the world. Liberal Judaism, however, more consciously upholds the universalistic character of the religion, and lays more stress on the fundamental principles than on their expression in ceremony and institution. It allies itself specifically to the teaching, or rather to the spirit, of the Hebrew prophets, who made their appeal to the great truths of religion and morality, and who held that these truths can be brought to bear directly on the life of humanity. But liberal Judaism maintains, as strongly as does the older Judaism, that spirit and letter, prophet and priest, are not antithetic. Hence, although some individual liberal Jews are now expressing appreciation of parts of the NT, liberal Judaism does not acquiesce in any general condemnation of Pharisaism apart from the abuses to which every organized system is liable. On its part, while reducing considerably the number and details of ceremonial observances, and while leaving even such important ritual as the dietary laws a matter for individual choice, liberal Judaism accepts and maintains the idea of ceremony as valuable for enforcing the religious life in the synagogue and for sanctifying the home. Hence the Sabbath, and great festivals, and a number of other public and family rites are lovingly retained. The very fact that this can be done without the ritual precision marking the observance of the same rites in the older Judaism is tending to revive many beautiful customs, full of significance for the historical continuity of religious experience, and possessed of spiritual value, which modern conditions of life were weakening or destroying. It may be said, in conclusion, that liberal Judaism applies to ceremonies the test of present values. It believes in the retention of whatever of the past has vital value in the present or promises a renewal of value in the future.

LITERATURE.—D. Philipson, *The Reform Movement in Judaism*, New York, 1907 (a complete history of the movement with many quotations, and full references to the earlier literature on the subject); C. G. Montefiore, *Liberal Judaism*, London, 1903, *Outlines of Liberal Judaism*, do. 1912; *Richtlinien zu einem Programm für das liberale Judentum*, Frankfort, 1912 (an important series of declarations which are the basis of the liberal revival in Germany now in progress); volumes of the annual *Year Books* of the Central Conference of American Rabbis (the meeting in Detroit in 1914 was the 25th of the series); *Jewish Addresses*, London, 1904, and other publications of the Jewish Religious Union, London.

I. ABRAHAMS.

LIBERTARIANISM AND NECESSITARIANISM.—I. *THE CONTROVERSY AND ITS METHODOLOGY.*—Libertarianism [1] is misrepresented by necessitarians; necessitarianism is misunderstood by libertarians. So we find it urged by writers on either side of this discussion, and even a moderate acquaintance with the relevant literature substantiates both these charges. This is not due to wilfulness, but arises partly from the ambiguity of language which is unequal to the subtlety of nature, though mainly, as we shall see, from the intrinsic difficulty of the problem itself.

'Both parties commit themselves to a confusion which arises from language, and which is due to the fact that language is not meant to convey all the delicate shades of inner states' (Bergson, *Time and Free Will*, p. 160). 'Facts must be described in some way and therefore words must be used,' as B. Jowett reminds us (*Interpretation of Scripture and other Essays*, London Library Series, n.d., p. 526), but 'always in philosophy with a latent consciousness of their inadequacy and imperfection.'

It is therefore necessary to analyze terms like 'cause,' 'motive,' 'character,' which play such an important rôle in this discussion; for we must make sure that the question is not a logomachy, but a real one.

Thus the term 'causality' is allowed by custom, 'the arbiter of language,' to embrace many meanings. The scientist means by it uniformity of sequence, and objects to any other meaning. Now it is clear that, if this is a full account of causation, libertarianism in any sense is meaningless. For to seek the cause of a moral action in the past is to desert the moral standpoint, and is vetoed by the moral consciousness. Moreover, causality as uniform sequence seems to be full of contradictions. There are uniform sequences which are not causally connected, as the conjunction of night and day. Again, uniform sequence lands us in an infinite regress. The intellect which meant to satisfy itself by going one step back is urged to go back for ever. When we come to man, however, we find, or seem to find, a 'cause' which is intelligible in itself. We know *why* we act in some cases; it is because we have purposes which we wish to realize, ideals by which we guide our actions. It may not be possible to explain *how* we act, because activity is an ultimate element in our experience, just as we cannot say how we think, but *cogito ergo sum*. Man, then, appears to himself the principle of his own movements; here the cause is immanent and efficient. And he guides himself by ideas; here the cause is final. At first men applied 'cause' in this full sense to the world of nature, as we still do in ordinary speech.

'Savages wherever they see motion which they cannot account for there they suppose a soul' (G. T. F. Raynal, quoted by T. Reid, *Essays on the Powers of the Human Mind*, 3 vols., London, 1822, iii. 269).

As time went on, this rich view of causality as applied to nature became eviscerated. Final causes were fruitless, efficient cause was useless, the regularity of sequences sufficed. No one can deny that this was a gain, that superstition and magic thus received a death-blow, and that nature was examined with greater impartiality and rewarded the patient student. It is, however, questionable whether this view is rightly termed causality at all, for what is it but an attempt to understand a change without beginning or end, an attempt which succeeds only because it has the instinct to stop somewhere and to take just as much of the change as it pleases? A change, however, can never explain itself, and it certainly cannot explain the subject who is conscious of it or the moral agent who thinks—rightly or wrongly—that he can direct it in accordance with his aims. In discussing freedom we must ask which view of causation is the most satisfactory. It will not do to foreclose the question off-hand by a bigoted adherence to uniformity of sequence as alone possible or exhaustive. If we remember this looseness in the use of the term 'cause,' we are saved from initial confusion and from the arrogance of gratuitous assumptions. To say that a human action is 'caused' does not in any way inform us as to the kind of causation implied. The rashest libertarian may use the term without committing himself to determinism.

'The circulation of the blood is not the cause of life in the same sense that a blow with the hammer may be the cause of death, nor is virtue the cause of happiness in precisely the same sense that the circulation of the blood is the cause of life. Everywhere as we ascend in the scale of creation from mechanics to chemistry, from chemistry to physiology and human action, the relative notion is more difficult and subtle, the cause becoming inextricably involved with the effect and the effect with the cause, every means being an end and every end a means. Hence no one who examines our ideas of cause and effect will believe that they impose any limit on the will. They are an imperfect mode in which the mind imagines the sequence of natural or moral actions; being no generalization from experience but a play of words only. The chain which we are weaving is loose, and when shaken will drop off. External circumstances are not the cause of which the will is the effect, neither is the will the cause of which circumstances are the effect. But the phenomenon intended to be described by the words "cause and effect" is itself the will whose motions are analysed in language borrowed from physical nature' (Jowett, *op. cit.* p. 526).

Occam's razor [1] is no doubt a useful instrument

[1] The term, according to Thomas Reid, was introduced into philosophy by Alexander Crombie (1760–1842).

[1] 'Entia non sunt multiplicanda praeter necessitatem.'

for certain purposes, but it can be abused, and it is abused when causality is shorn till nothing is left but uniform sequence.

Further, in our use of the term 'motive,' we ought to remember that motives do not act on a person as forces act on a body. While it is true that in deliberation, which is mainly intellectual, we have something metaphorically similar to the placing of weights in a balance, yet this is a metaphorical resemblance only, and in real action the decisive elements are preference and value, and these emerge from the living person himself. Motives are movements of the subject as well as movements on the subject. The subject acts on its own affections.

'We must reject also the idea that our motives are fixed and given quantities which operate within the soul like weights on a pair of scales, thus effecting a decision. Must all conduct result from given motives—cannot new motives arise from inner transformations of life? And, moreover, must not the soul continually assign fresh values to the motives?' (Eucken, *Main Currents of Modern Thought*, p. 439, footnote).

If moral activity is real, then we cannot speak as if a decision was a resultant compounded of many different forces acting on one centre; we find rather that one course of action is preferred by a person and acted on. The rejected proposals do not enter into the action as in the case of mechanical resultants. In fact they may even strengthen the preferred activity—by rousing the subject to greater effort. It is often said that the strongest motive always prevails, but, if this means that the motive which prevails is always strongest, we have an identical, and so a useless, proposition. If it means, as most ordinary people take it to mean, that our reason always obeys our passions, that, in Bentham's phrase, 'nature has placed man under the empire of pleasure and pain' (*Principles of Morals and Legislation*, London, 1789, ch. i.), then it is not true. While men act largely from passion, they need not do so; and, indeed, to most people, as Lecky points out, 'the reality of all moral freedom ultimately depends' on the distinction between our will and our desires, on what Reid in his able discussion on this point calls our animal and our rational natures (W. E. H. Lecky, *Eur. Morals*[8], London, 1888, ii. 123; Reid, *Essays*, iv. ch. 4). It is just because a mechanical view of motives is tacitly assumed as true that so much confusion arises. J. S. Mill failed to distinguish properly between desire and will for this reason (see A. C. Pigou, *The Problem of Theism*, London, 1908, p. 79); and, when T. H. Green says: 'but he being what he is, and the circumstances being what they are at any particular conjuncture, the determination of the will is already given, just as an effect is given in the sum of its conditions' (*Works*, London, 1906, ii. 318; cf. *Prolegomena*, Oxford, 1883, p. 126), we feel that in the last clause he has given up his own standpoint and descended into another genus of thought. No one has done more to explain the real nature of motives than Green, and perhaps this is an unfortunate lapsus. Libertarians have probably fastened on this and the corresponding sentence in the *Prolegomena* with too great avidity. Green not only recognized, but enforced and carried through all his moral reasonings, the difference between motives and the solicitations of desire. While we admit, then, that moral action depends on motives, we do not by this admission decide the question of freedom either one way or another. We have still to ask what the nature of this relation is.

Again, no term is more abused in this discussion than 'character' (see Eucken, *op. cit.* p. 422 ff., and art. CHARACTER, vol. iii. p. 364 f., for the various meanings of this term). While the determinist tends to look on 'character' as fixed at each stage, its growth depending on the interaction between it and circumstances also fixed, the indeterminist sometimes speaks of the will as acting independently of the character; and so in the former case we have character explained as mechanical, and actions looked on without regard to any real activity of the subject, while in the latter case we have a subject with no content. But, in reality, what we have is a subject possessing a character which has to be conserved or bettered in the midst of circumstances. We have a subject conditioned by its object but relatively independent of it. This 'character' is not fixed at any point, nor are these circumstances unalterable. Circumstances and character are not indifferent to the subject, nor does the subject act otherwise than through them. But, if the subject could not act teleologically on them and through them, there would be no moral life at all. There is a seeming paradox in all self-control or self-denial, as Plato saw, but it is a paradox explicable only on the ground that personality is a potential infinite under self-imposed moral government.

If 'character' be used in a sense which gives no future to man, which forgets that man does not grow simply as a plant grows, but that he draws on the future also for his spiritual sustenance, then Martineau and others are justified in drawing some distinction between the 'self' and the 'character.' In fact, some such distinction is used in every philosophical system which recognizes that man can obey ideals and an 'ought' which is higher than 'is.'

'With regard to moral laws, experience is (unfortunately) the mother of pretence, and it is in the highest degree reprehensible to allow laws relating to what I ought to do to be determined or limited by what is done' (Kant, *Works*, ed. G. Hartenstein, Leipzig, 1867–68, iii. 26).

In regard even to the past there is a very true sense in which a spiritual being like man can be said to create it. He selects from it, and reacts upon it. If the self is treated as fixed, *i.e.* if its future determinations are calculable, if any dubiety on this head is held to be owing to our imperfect knowledge, then we are unconsciously falling back on a biological view of the self. This may be done in the interests of our ideal freedom, as by certain Hegelians; but there is the danger that by so doing we are destroying the very possibility of this ideal freedom itself. In discussing the question of freedom, the phrase 'self-determination' or 'determination by character' may be used in a way that ignores the very possibility of freedom. We do not solve the question by the phrase 'self-determination' or 'self-realization.' We need to examine what this self is, and what is the nature of the determination.

We are thus led to the conclusion that the misunderstanding between the two parties is deeper than language, that it is inherent in the problem itself. The question of freedom is but a specific way in which different theories of life conflict. The controversy is like a combat between two representative champions, on the issue of which the fate of armies depends. That is what gives the problem its perennial interest and importance, and makes it so difficult of solution. It is true, as Eucken points out, that in recent times more than in the past the solution of the problem is attempted through an analysis of experience (*op. cit.* p. 433), but the problem cannot be solved on that arena alone; it is mainly a philosophical and theological question. The wider issues emerge sooner or later on whatever plane we attempt a solution. Freedom may be taken as the touchstone of every philosophical system. To explicate a theory from this standpoint is to come face to face with its real implications.

'If there be anything obscure and difficult in philosophy we are sure to find it in that part which treats of Elections and

Liberty' (W. King, *Origin of Evil*[4], Cambridge, 1758, ch. v. sect. i.).

This is the reason why in actual discussions we find the battle raging, not round a single point, but over a wide area of consequences, and herein is the danger that we may attribute to thinkers consequences which they repudiate, because we think these consequences follow from admitted premisses. We can accuse men of bad logic; we must not falsely report them.

For example, necessitarianism is often identified with fatalism.

'It is supposed to imply the existence of a Fate which forces people, whether they like it or not, to commit so many murders in proportion to their population, or forces a sober person to take to drink because his grandfather was a drunkard' (Leslie Stephen, *Hobbes*, London, 1904, p. 157 f.).

J. S. Mill protested against this identification, and distinguished between his own view and such a view as that of Robert Owen, according to whom our characters were made for us and not in any sense by us. We must allow the distinction. It is not necessary to start with the conviction that determinism in every form destroys morality and paralyzes conduct. Many determinists, even of what William James calls the 'hard' school, endeavour to show that morality is impossible save on their theory. Probably the ordinary man will always associate determinism with fatalism; probably his instinctive logic is right in so doing; in discussion, however, it is necessary to distinguish them, unless the force of argument compels us to identify them.

Again, the libertarian view is identified with caprice, with a liberty of equilibrium according to which the power of the will is not influenced in any way by education, experience, or training. The objections to this view, however, are so many and so obvious, and have been so often pointed out by libertarians themselves, that it is surely frivolous on the part of determinists to attack this view of liberty. What A. S. Pringle-Pattison says of J. M. E. McTaggart is true of many more.

'He attacks a "freedom of indetermination" for which I do not think any champion would enter the lists. What upholder of freedom, for example, would accept the statement that "according to the indeterminist theory our choice between motives is not determined by anything at all"?' (*Phil. Radicals*, London, 1907, p. 205 f.).

The problem will not be solved, but rather shelved, if libertarianism is identified with an exploded myth, or determinism answered by the story of Buridan's ass dying between two equally attractive bundles of hay. Conforming, then, to the proper method of carrying on this discussion, it is necessary for us to examine the various types of necessitarian doctrine, leaving out the theological aspects of the problem, which more properly fall under the title PREDESTINATION.

II. *DIFFERENT TYPES.*—When we try to classify various theories of necessity and freedom, we are tempted to neglect the historical elements, to eliminate epochal and personal peculiarities, and so to identify views that differ widely in their ultimate assumptions and aims. To do this is to do violence to facts and to confuse the problem itself. No one can justly treat Augustine and Hobbes as if they spoke in unison on this matter. Yet it is possible and desirable to examine certain typical ways in which this problem has been discussed.

1. The common man's position.—Perhaps the most prevalent view is to regard freedom and necessity as both true although apparently contradictory. We do not refer to the high-idealistic way of identifying opposites, but to what may be called the common man's position. W. Hamilton, *e.g.*, accepts both as facts of consciousness: to use either exclusively is to land oneself in confusion; but, while each alone is false, both together are true. Hamilton's position, however, is so dependent on his peculiar theory of knowledge and ignorance that it has now only an historical interest. It is clear that he and Mill held practically the same views on freedom when their admissions and cautions are taken into account. The fundamental assumptions of their systems are, however, very different.

Theologians often take up this position. They speak of predestination and free will as concentric circles; to us they appear inconsistent, but in reality they are compatible with each other. It may be the case that for practical purposes it is best to regard the problem as on a par with Zeno's famous paradoxes and to say: 'Solvitur ambulando.' The value of this view seems to lie in its recognition of facts and its faithfulness to experience. Its weakness consists in its theoretic helplessness. For we find too often that freedom is confined to a realm which is swiftly being conquered by necessity, or else that it is raised to a pro-temporal or supra-temporal region while experience as we know it is rigidly determined. Or, again, freedom is viewed simply as a datum of consciousness which is not in any way brought into line with the rest of experience. Human life is thus divided into two spheres which contradict each other—on one side freedom, on the other necessity.

It is very doubtful, however, if the problem can be thus solved. There are distinctions in experience, but they are not meant to be contradictories, nor are the limitations of our knowledge to be used to discredit knowledge itself. It is a gain to recognize that both freedom and necessity have a meaning, and that both are implicitly taken for granted in all systems. The most rigid determinists surreptitiously admit freedom.

'Moreover, determinism has never been completely and logically carried out at any period. When the Stoic philosophers converted the whole cosmos into a causal structure and placed the destinies of men entirely within its framework, man's power of personal decision still remained; . . . The possibility of such decision (the very core of Stoic morality) is obviously in direct opposition to the determinist doctrine. . . . And in Spinoza's case, although he so strongly maintained that man is situated entirely within a flawless network of cosmic connections, the fact remains that man has to be won over to a recognition of his position, and this recognition imparts quite a new complexion to the whole of life' (Eucken, *op. cit.* p. 435). 'Naturam expellas furca tamen usque recurret' (Horace, *Ep.* I. x. 24).

So also theologians like Augustine, Calvin, and Chalmers, in the interests of morality, appeal to the conscience and the power of choice. The Stoic admitted the possibility of sudden conversion. Can, then, determinism alone or freedom alone be taken as true or must both be recognized? Attempts have been made to carry necessity all through reality—with some show of plausibility.

2. Physical determinism.—Huxley, for instance, revived the view of Descartes that animals were simply automata, and man was explained in a similar fashion. Consciousness had no more efficient relation to the movements of a creature than the steam-whistle has to the movements of a railway train. Few, if any, biologists would agree with this theory in detail, but Huxley's assumptions and aims are still widely accepted and implicitly acted on by scientific philosophers (not necessarily scientists). His purpose was to guard physics and biology from the moralist, who worked with teleological concepts whose introduction into physics produced chaos and confusion. The scientist feels at home in dealing with the movements of matter. He can describe, predict, and to some extent control, them. He has thus enriched society, discovered new media of communication and means of comfort. The results here are so great and beneficial that one can appreciate the desire to apply the same methods to all reality. Hence the theory of the conservation of energy is

held to explain everything, and the scientific categories of cause and effect are, it is taken for granted, operative everywhere just as in physics. All apparent differences are levelled down under this theory. So consciousness arises, it is said, out of molecular motions, and accompanies them like the phosphorescent line which results from the rubbing of a match. No efficiency can originate in consciousness; otherwise there would be the intolerable fact that something came from nothing. The amount of the existing energy is so fixed that we could accurately predict the future if we knew the state of things at any moment. We do not, of course, have accurate knowledge at any time; but, if we had, then the future would be open and naked to us. This is not the divine foreknowledge of which theologians speak, for many of them admit the greatest freedom (as King in his famous sermon on Predestination, published with notes by R. Whately in his *Use and Abuse of Party Feeling in Religion*, London, 1822) as consistent with the divine foreknowledge. It is really our ordinary physical knowledge infinitely enlarged. Now this view, conveniently known as naturalism, has no place for freedom in any shape. It has no place for anything ultimately but matter and motion. This determinism is totally different from theological determinism, and should not be identified with it, as it so often is.

The libertarian can leave to the biologist the refutation of this view. He can leave it even to the physicist himself. It may be pointed out that the advance of science does not depend on extending these assumptions to cover all reality. Indeed, to do so is to make science itself chaotic and indeterminate, for the value of the principle of the conservation of energy depends on its limitation to those fields where the amount of energy is calculable. It does not in the least show how the energy whose working is calculable is related to all the energy in existence. If it tried to do so, it would be useless. Its strict delimitation is the very condition of its success. Nor does it allow for different kinds of energy; it must confine itself to quantitative relations. Hence the pretence of foretelling the future is simply a logical conclusion from the principle itself.

The fact is that biology needs new categories. The lowliest organism possessing spontaneity must not be factorized into general conditions, far less reduced to a single principle. It is doubtful if anything that can be called a 'thing' can be so explained. One golf-ball is not another, and a living being has an even more obtrusive individuality. Was this the reason why even Epicurus attributed to each atom an 'exiguum clinamen' peculiar to itself? In the higher animals at least, consciousness is a real factor whose presence helps towards preservation and propagation; it would otherwise be unintelligible. When, again, we come to explain man, we must recognize the existence of a new problem. Are we to regard history and civilization, ideals and achievements, as shadows of matter? The unsatisfactoriness of this theory is perhaps best shown by its own advocates. For they forget their own assumptions in dealing with knowledge, morality, and social life. They make morality to consist in warfare with the cosmic process (as Huxley). They regard consciousness as flowing alongside of neurotic processes, but related to them in no way: they are both manifestations of an unknown energy. Some of them (Clifford, Haeckel, etc.) make matter conscious. Further, they seem to make all reality to be somehow in consciousness, and so in the realm of shadows. The prevalence of naturalism is due to two causes. In the first place, every theory must recognize the enormous influence which the physical organism has on the inner life, the intimate relationship between the higher phases of spiritual existence and material conditions. This naturalism does, and it is therefore valuable. Again, there is a close connexion between this view and the results of science. No theory that scorns scientific results can nowadays prevail, but these results are not dependent on naturalistic assumptions. The weakness of this view is revealed when it tries to explain itself; then it either forgets itself or contradicts itself, or, as is almost always the case, it admits consciousness as a reality and tries to explain it on deterministic grounds. It leads thus to psychological determinism.

3. Psychological determinism.—The basis of this determinism is the theory of association. Consciousness is recognized as 'sui generis,' but any existing phase of it is said to be caused by the preceding. Great stress is laid also on physiological processes, often in such a way as to suggest that these are the ultimate causes. Now there is always a relation between states of consciousness even when these are qualitatively different, but to explain this relation is just the problem. The cause of this relation is not always evident to the subject experiencing it. Even the simplest case of memory is tinged with personal qualities that raise it above a mere association of ideas, and, as Bergson points out (*op. cit.* p. 156), many of our so-called associations are *ex post facto* attempts to unify experience. The main objection to this theory is its defective view of the 'self.' What we find is a bundle of impressions not one of which or all of them together make the self. A. Bain, following Hume, says: 'I cannot light upon anything of the sort [*i.e.* a self]' (*The Emotions and the Will*[3], London, 1875, p. 492). But the fact is that the self thus banished is tacitly assumed in every statement, although sensation, knowledge, and volition are all explained as if there were no subject to which they belonged. The personal equation is forgotten in each case. We are dealing all through with given quantities which arrange and rearrange themselves evidently *in vacuo*, or, rather, as Bergson insists, in space. Consciousness is a stream, or a display in a theatre at which no one is looking. What we have here pictured for us is a conflict of motives acting nowhere—a fight without fighters. When the self is recognized, it is only as a desire or aversion or a point in which motives meet, but it has neither position nor magnitude.

'To talk of motives conflicting of themselves is as absurd as to talk of commodities competing in the absence of traders' (Ward, *Realm of Ends*, p. 290). 'The associationist reduces the self to an aggregate of conscious states: sensations, feelings, and ideas. But if he sees in these various states no more than is expressed in their name, if he retains only their impersonal aspect, he may set them side by side for ever without getting anything but a phantom self, the shadow of the ego projecting itself into space' (Bergson, p. 165).

No one in Great Britain has done more than Green to discredit the associationist view of experience. He saw clearly that states of consciousness could never account for consciousness of states. It is true that he explicated this truth mainly in regard to the cognitive element, but it is equally true in regard to feeling, and even more in regard to volition. Sensations are determined by interest; attention depends on the subject as well as on the object. Experience is always seen from the inside, and in the nature of the case can never be seen directly from the outside. It is personal and individual. To deny this is to deny the very possibility of freedom, in fact, to make freedom meaningless; to admit it is to get a platform on which the question of necessity and freedom can be intelligently discussed.

4. Self-determination.—Can we then regard the reality of freedom as a common platform for every system that admits an activity of the subject

which issues from itself, and which cannot be reduced wholly to the influence of conditions? There is a sense in which this is true of all things —of chemical reaction, of biological growth, and of human activity. Everything—man included—has its own nature, and freedom is simply the acting out of this nature according to its own laws. Is this a sufficient account of freedom? If it is, freedom means freedom from compulsion, and it could be applied, metaphorically at least, to everything. The planets are thus free as the immortal gods; the flower that grows without being trampled on, the lion in the jungle, the man out of fetters, are all free in this negative sense. Or it might mean that man was able to fulfil the distinctive laws of his being without internal interruption, *i.e.* interruption arising from the man himself as distinct from external compulsion.

Schopenhauer understood Kant's view of freedom in this sense as the working out of the 'esse' according to its own character, conditions giving the occasions to this nature to reveal itself in time and space. Freedom here means the evolution in acts of the inner nature of the subject. The subject is free, but the acts are rigidly determined. Whether this be a true representation of Kant we do not need to inquire. At any rate freedom here seems to be the bare knowledge that we act as we act. Curiously enough, Schopenhauer admitted conversion as Kant and the Stoics did, but only as a mystery. It is now generally acknowledged that this is determinism of a very 'hard' type.

But, leaving aside Schopenhauer's clumsy apparatus of a noumenal ego and phenomenal acts, it may still be held that freedom is simply determination by oneself.

'To be free means that one is determined by nothing but oneself' (J. S. Mackenzie, *Manual of Ethics*[4], London, 1900, p. 94).

Every one holding the activity of the self as a fact agrees with what this statement excludes, viz. mechanical causation or compulsion. In this respect the statement is immaculate, but what does it include? We may see this from the context.

'A vicious man in a sense can, and in a sense cannot, do a good action. He cannot, in the sense that a good action does not issue from such a character as his. A corrupt tree cannot bring forth good fruit. But he can do the action, in the sense that there is nothing to prevent him *except his character*—*i.e.* except himself. Now a man cannot stand outside of himself, and regard a defect in his own character as something by which his action is hindered. If he can, *but for himself*, he *can* in the only sense that is required for morality' (*ib.* p. 93 f.).

This view, it is held, combines the truth of necessity and freedom because it gives uniformity and spontaneity a place; but since it was set forth in 1900 a very influential school has maintained the opposite. Surely the real question is: Can the tree itself be made good? not Can grapes grow on thorns? If any libertarian holds that good fruit can come from a bad tree without changing the tree itself first, then libertarianism is indeed a lingering chimera. But, if libertarianism holds to the possibility of changing the bad character itself, then it seems worth contending for, and recent investigation into changes of character seems to substantiate its truth. The authority who tells us that a bad tree cannot bear good fruit also exhorts us to make the tree itself good, and, on the Kantian dictum that every 'ought' implies a 'can,' which Mackenzie accepts, this is possible. Is the difficulty here not due to the fact that a static and spatial view of 'character' is unconsciously adopted? The living self is as it were photographed, and this snapshot is taken as fixed and true. Yet the same writer goes on to speak of at least three different selves, one of which he places above the 'character,' and he makes real freedom obedience to this self. We are grateful to the Hegelians for emphasizing the value of this real freedom which the theologians always recognized, the freedom of a *non posse peccare* such as we imagine in a perfect being. There need be no dispute about such freedom and its desirability. But how can we attain to this freedom itself if the 'character,' the man himself, prevents its ever being sought after? It seems absurd to talk of progress here, or of degrees of freedom, if the very road towards it is barred. Fortunately, however, those holding such views are so much alive to the interests of morality that they forget their own theories, as the rigid predestinarian also does. It is sought sometimes to explain this view of freedom by the analogy of knowledge. In logical reasoning we have necessity and free activity also; that we cannot think otherwise is no restraint on thought. But does knowledge itself not advance through experiment and error? This theory, then, would do very well for a perfect world, and consciously or unconsciously it is this idea that reality is perfect that animates it, but the freedom we need is not first the freedom of absolute perfection, but one that can open a door of hope to men who err in thought and practice. We need a freedom that will help us to get the perfect freedom which none of us has as yet. When we start with a theoretic bias in favour of a perfect reality, either of two things happens.

'This system of exclusively immanent reason, with its pantheism, suffers shipwreck more particularly upon the fact of the manifold unreason in human and natural life. For, from this point of view, there are two alternatives only; either the unreason must be minimised, removed as far as possible from sight or explained away, or it must be recognised as a basic element in reality and hence held to be unassailable. Thus we have either a tendency towards optimism, which involves shallowness, or towards pessimism, which means negation and finally despair' (Eucken, p. 468 f.).

It will not do to project the activity of the subject either into a perfect absolute or into social customs. For, while a perfect absolute would explain perfect freedom, it does not explain sin and error, which are the roots of all our difficulties, nor does society give us any relief, because we find all the perplexing difficulties of our life repeated in it.

Conclusion.—The freedom which we desiderate is a moral power that can make the world better. While knowledge may be content to unfold its object and works, as Bergson says, 'in the circle of the given,' in morality we make the object. 'Action breaks the circle' (*Creative Evolution*, London, 1912, p. 203). But, if we admit this freedom to make things better and indeed to create, then we must admit also with it, as its correlative, freedom to make things worse and to destroy. Is not this what we actually find in experience? We have in man a spiritual being rising above nature to the heights of ideals, but also falling into nature, disobeying ideals, and refusing to realize them. We find new individuals appearing who were never there before, a fact which no bare singularism can ever explain. If reality were suddenly frozen into a static whole, then absolute thought would have the happy task of quiet contemplation; but reality is always active, and so living thought and living action are never satisfied with the past, nor is morality ever satisfied with the present. Bergson tries to show that it is the neglect of this dynamic nature of life that makes the whole difficulty of freedom; and for philosophy and theology the greatest task at present is to outline a theory of reality and of God that, starting from this fact, can give us some reasonable view of nature below us and God above us. Our freedom is conditioned by both of these, though in different ways; the one supplies the media, the other the norm, for the activity of spiritual beings. We are not mere cogs in the

machine of nature, nor mere points through which God irresistibly acts. May it not be the case that nature itself is more friendly to us than we imagine, that its stability is a training-ground for growing men to learn their powers, and carry out their purposes, and God Himself our very life whose unchangeable nature gives independence to our dependence, and whose perfect freedom and moral relations to us alone supply the transition by offering us the power by which we can be freed from our self-delusion and our moral thraldom? The great objection to this view is that we get something 'de novo.' But is that not just the whole claim of morality, that the present be not simply projected into the future, but that a new and a better world be created? For Christianity, at any rate, the possibility of new creatures and of a new world is basal. What a moral law, an 'ought' above the 'is' of character, implies is that this requirement is morally more reasonable than a mere re-arrangement of the existent. We need not be afraid of those who cry 'chance.' For there is so much unreason and absurdity, so much cruelty and evil, in the world that we welcome even 'chance' if it opens a door to their abolition. That this could be possible without the dangerous gift of free power we cannot conceive. But so imperative is the need of betterment that even this dangerous method is welcome. Nor need we be concerned that thus the peace of the absolute is destroyed. The only Absolute for which Christian men care has, if certain tales be true, sacrificed His own peace and more to make it possible for men to obey their conscience and be fellow-workers with God.

LITERATURE.—The literature on this subject is well-nigh unlimited; see the selection given in *DPhP*. Recent discussions are found in J. Ward, *Realm of Ends*, Cambridge, 1911; H. Bergson, *Time and Free Will*, Eng. tr., London, 1912; R. Eucken, *Main Currents of Modern Thought*, Eng. tr., do. 1912; F. C. S. Schiller, 'Freedom and Responsibility,' in *Oxford and Cambridge Review*, 1907, p. 41 ff.; Andrew Seth, *Two Lectures on Theism*, Edinburgh, 1897; Norman Pearson, *Some Problems of Existence*, London, 1907; Bertrand Russell, *Philosophical Essays*, do. 1910; Borden P. Bowne, *Personalism*, do. 1908; C. B. Upton, *The Bases of Religious Belief* (*H L*, 1893), do. 1894, *Dr. Martineau's Philosophy* (with Introductory Essay), do. 1905; Oliver Lodge, *Man and the Universe*, do. 1910; James Lindsay, *Recent Advances in Theistic Philosophy of Religion*, do. 1897, ch. xiii.; G. F. Barbour, *A Philosophical Study of Christian Ethics*, do. 1911, ch. x.; see also art. FREE WILL.

DONALD MACKENZIE.

LIBERTY (Christian).—In this article no attempt is made to deal with the philosophical problems of free will and determinism, nor with the relation of free will to predestination or causality; the reader is referred to the artt. specifically treating of free will under its metaphysical and speculative aspects (see artt. FREE WILL, LIBERTARIANISM AND NECESSITARIANISM, PREDESTINATION). Of recent writers on Christian ethics Haering, *Ethics of the Christian Life* (see pp. 76–95), may be consulted for a discussion of the free will as a presupposition of Christian morality, and in particular in its relation to conscience as viewed from the Christian standpoint.

By the Biblical writers the fact of human free will is assumed, like the existence of God. Free will in its absolute sense belongs alone to the unconditioned being of the Deity, but on the moral side man is at once free and responsible. In Ezk 18^{1-4} the idea of irresponsibility as a deduction from heredity is vigorously combated: 'the soul that sinneth it shall die.' Man, who is created in the Divine image, is a partaker of the Divine nature, and his freedom is the reflex of God's. When we pass into the atmosphere of the NT, we discover that personal free will is an axiom in the teaching of our Lord and His apostles. We may therefore fitly consider the following aspects of the subject.

1. **Christian liberty as a religious experience.**—The religious life in our Lord's interpretation is a filial relationship with a Heavenly Father, and therefore a life of liberty. It consists in love to God and to man. When hatred, rancour, and resentment, on the one side (Mt $5^{44f.}$), and needless anxiety in relation to material things, on the other (Mt 6^{31-34}), have been expelled from the soul, we are then truly the sons of our Father. The submission of children to the Father above is not a surrender of liberty, but its noblest prerogative; in fact, freedom in the Christian sense is simply obedience to that which we most truly and deeply love and venerate. Freedom is attained by self-conquest, by victory over unrighteousness, of which the penalty is self-contempt and unrest. 'Come unto me . . . and ye shall find rest unto your souls' (Mt 11^{28-30}) is a promise of freedom. Self-denial, therefore, to Jesus is a privilege, not a loss; the taking up of the cross (Mt 10^{38} 16^{24}, Mk 8^{34}, Lk 14^{27}), which looks like the loss of liberty, issues in moral emancipation.

This general view of religion explains our Lord's attitude towards the Mosaic Law, which is a conspicuous feature of His teaching alike in the Synoptic and Johannine narratives. He does not, of course, countenance an antinomian contempt of moral restriction, nor does He proclaim exemption from the Moral Law. In so far as the Mosaic Law enshrines the eternal principles of morality, it is worthy of all reverence; it is not superseded, but only consummated, by the 'New Commandment' of our Lord's teaching. On the other hand, in the course of time the Law had been marred by accretions of interpretation which tended to lay the emphasis on vexatious minutiæ of custom and usage, and elevated practices of cleanliness and health to an unnecessary prominence, with the result that trivial and secondary regulations were deemed as sacred as the original enactments. The letter of the Law was punctiliously observed by the pious Jew in the hope of propitiating God. Obedience to the outward regulation tended to cloud the finer powers of the inner life and to produce a distorted sense of the relative value of given acts. Hence our Lord's pronouncements on the unwashen hands of the disciples (Mt 15^{20}, Mk 7^{2}) and on the proper view of the Sabbath as 'made for man' (Mk 2^{27}) are to be regarded as examples of His method of interpreting the nature of Christian freedom. He substituted great principles of action for minute and arbitrary regulations supposed to be binding at all times and under all circumstances. He superseded definitions of duty—*e.g.*, our duty to our neighbour in the parable of the good Samaritan—by a commandment 'exceeding broad,' namely, the law of love.

It is obvious that this view of liberty receives its crowning illustration and its binding force from His own manhood. If we take such statements as Jn 4^{34} 5^{30} 6^{38} as summing up the character of His own religious experience, we discover that self-will in His judgment is no freedom; the true freedom for Him was 'to do the will' of His Father. Moreover, His sinlessness is the supreme argument for His conception of freedom and the reality of His power to liberate humanity from the power of sin. These ideas are clearly expressed in His discourse to 'those Jews which had believed Him' (see Jn 8^{31-36}). Professing, as 'the seed of Abraham,' that they had never suffered the extreme penalty of domination by their conquerors—a proud boast and substantially true in so far as the preservation of their racial identity was concerned—they had overlooked the true principle of freedom, which was in effect freedom from the bondage of sin. Moral emancipation was the *real* freedom (free 'essentially,' ὄντως [8^{36}]) in our Lord's view. 'The

truth' which is to set men free is 'perfect conformity to the absolute, that which is' (see B. F. Westcott, *Gospel according to St. John*, London, 1908, on Jn 8^{32}, and the relation of this conception to Socratic, Stoic, and Jewish ethics). Again, in Jn $15^{14f.}$ our Lord speaks as the true imparter of freedom; He communicates to others what is His own (παρὰ τοῦ πατρός μου); and this self-communication is the basis of a friendship between Himself and His disciples in which the doing of His will is not a service but a joy.

These conceptions of Christian liberty as a religious experience find further illustration in the writings of St. Paul, to whom ἐλευθερία is a vivid and real characteristic of the Christian life; this word, with its connected epithet and verb, 'free' and 'set free,' occurs 11 times in Gal., 7 in Rom., 8 in the Corinthian Epistles, and twice in other letters (see W. M. Ramsay, *Cities of St. Paul*, London, 1907, p. 36ff., who argues that this is one of the ideas which became familiar to St. Paul from his Hellenic environment in Tarsus and elsewhere). In the Galatian Epistle in particular he enunciates with great emphasis the freedom which the gospel confers 'in Christ Jesus' (see Gal 2^4). The Christian ἐλευθερία destroys distinctions of sex, social status, and race (3^{28}; cf. also Col 3^{11}, Eph 6^8). By an allegory which recalls our Lord's words in Jn 8^{35} he differentiates (4^{22-30}) between the children 'of a handmaid' and those 'of a free woman,' indicating that the real freedom is that of the spirit imparted to us by Christ (5^1), which involves a complete abrogation of the outward enactments of the law as a means of personal and universal salvation. He protests against submission to the rite of circumcision, which, while it had a religious significance to the Jew, had none to the Gentile, ending with 'the impatient, perhaps half-humorous wish that the Judaizers who want to circumcise the Galatians might be subjected to a severer operation themselves' (W. R. Inge, 'St. Paul,' *Quarterly Review*, no. 438 [1914], p. 53). But, while glorying in the liberty to which the Christian has been called, he is careful to avoid any misunderstanding as to its nature: liberty is not licence (5^{13}).

But to St. Paul Christian liberty has an even deeper religious significance: it involves a real emancipation from sin (Ro 6^{18-22} 8^{2-21}, 2 Co 3^{17}); and herein he carries on the teaching of our Lord. His own personal experience is: 'the law of the Spirit of life in Christ Jesus made me free from the law of sin and of death' (Ro 8^2). This constitutes the true Christian sonship (Gal 4^7), 'the liberty of the glory of the children of God' (Ro 8^{21}); and we note that 'glory' here is an aspect of our present earthly existence. Sin, which is a bondage and carries with it a sense of guilt and condemnation, has been defeated by Christ, who is thus qualified to be the liberator of the soul (Gal 5^1). To early Christian writers the promise of freedom (2 P 2^{19}) from any other source is an illusion. It is from this experience of inward liberty that the fruits of the spirit—joy, peace, and hope—are developed. 'To be spiritually-minded is *life and peace*' (Ro 8^6) is a saying which recalls the serene and gentle teaching of the author of the Sermon on the Mount, and may be illustrated by the testimony of Christian experience in all ages.

St. Paul is indeed the great apostle of liberty. He regards the Christian life as one of unrestricted access to God, and lays much emphasis on the Christian duty of παρρησία, or boldness of utterance, in proclaiming the principles of the gospel (see art. 'Boldness of Speech,' *ExpT* xxi. [1909–10] 236ff., for an elucidation of this duty). His opposition to the narrower ideal of St. Peter saved Christianity (Gal 2^{11}) and made it a world-faith. He was the advocate of liberty of thought, action, and judgment. His pronounced views on original sin and the eternal, supreme power and grace of God never weakened his sense of human accountability (Ro 1^{18} 2^6).

As J. Weiss (*Paul and Jesus*, Eng. tr., London, 1909, p. 113) remarks, 'the ethical sense of responsibility, the energy for struggle and the discipline of will was not paralysed or absorbed in Paul's case by his consciousness of redemption and his profound spiritual experiences.'

He believed in Divine election, pre-knowledge, and predestination, and, without attempting to resolve the antithesis, places human determination side by side with these. Man co-operates with Divine grace, which is a power 'appropriated by man's moral nature and conditioned by his free action' (Alexander, *The Ethics of St. Paul*, p. 144, who quotes Ph 1^6 2^{13}, 2 Co 1^{12}, 1 Th 5^{23}, and the statement of Weiss just cited).

It may also be noted that St. James's royal 'law of freedom' ($2^{8.\ 12}$) is practically identical with St. Paul's 'law of the Spirit,' consisting, as Haering (*op. cit.* p. 162) remarks, in 'freedom from the multiplicity of single precepts,' while the epithet 'royal' appears to imply that 'Christ's law is not addressed to slaves, who must obey whether they will or not, but to the heirs of the kingdom (2^5) who voluntarily embrace the law as their guide; cf. the Stoic paradox in Hor. *Ep.* I. i. 106' (see note in J. B. Mayor's commentary *ad loc.*).

2. Christian liberty in relation to the problems of ethical and social life.—It is clear from what has already been said that Christian liberty as an experience of the inner life has a direct relationship with outward practice, and has created ethical problems in the conduct of life. This is seen in the conflict of duties arising within the early Christian Church as the result of the accession of converts from paganism to its ranks. For example, St. Paul was faced at Corinth with a difference of opinion regarding the practice of eating 'things offered to idols.' Evidently the peril lay in a one-sided and over-emphasized interpretation of Christian liberty, which offended the conscience of the more cautious and self-restrained Christians. There were, in fact, two opposing tendencies represented by those who strained their new-found Christian liberty to the breaking-point—'the strong' of 1 Cor. (see ch. 8, *passim*) and Christians of a narrower type, who were more concerned about preserving personal sanctity than about exercising their Christian privileges. The claim that 'all things are lawful to me' (1 Co 6^{12} 10^{23})—the watchword of 'the strong,' quoted out of their mouth by the Apostle—had been abused not only to the extent of participation in heathen sacrificial feasts, but to the extent of advocating grave licence and immorality in sexual relationships. As E. von Dobschütz points out, such Christians were self-deceived, mistaking outward freedom for the inner freedom proclaimed by the gospel.

'The slave, instead of joying in the freedom which Christ gave him, hankered after outward liberty. The Jew, instead of gratefully recognising his freedom from the constraint of law, exerted himself to secure release from circumcision: others sought also and found the freedom only in things which were unbecoming Christianity and morally impermissible' (*Christian Life in the Primitive Church*, Eng. tr., London, 1904, p. 66).

The strong must therefore take on their shoulders the infirmities of the weak (Ro 15^1); they must spare sensitive minds the pain of witnessing practices which appear to them to be wrong; as Christians, they are to refrain where the exercise of liberty is a stumblingblock to the weak (1 Co 8^9). Finally, the strong might lead others into sin by encouraging them to eat against conscience for mere self-gratification, and thus sin not only against their brethren but against Christ (8^{12L}). Such was the ruling of the Apostle. On the other hand, the moral revulsion from paganism produced

an exaggerated asceticism which in some sections of the Church resulted in the advocacy of celibacy, in aversion to mixed marriages (1 Co $7^{12f.}$), and even in hostility to such spiritual manifestations as 'speaking with tongues,' which recalled the excitements of pagan cults. In holding the balance between such opposing tendencies, neither of which did justice to the gospel as a whole, St. Paul had a difficult task. He sympathized with the moral vigour of the one and the moral earnestness of the other, and resolved the antinomy by the proclamation of Christian love as the supreme law of conduct and the sovereign *charisma* (1 Co 13). Christian liberty is always to be humanized, corrected in its exercise even where legitimate, and modified in the doing of what is morally indifferent by the spirit of love, which teaches the Christian not so much to stand upon his rights as to consider the interest of others. Such ἐπιείκεια (Ph 4^{5}), or 'sweet reasonableness,' is not a weak concession to human infirmity, but a virile demonstration of tenderness and charity. It was in this sense that the Apostle himself 'became all things to all men' (1 Co 9^{22}) that he might save some. He was ready to sacrifice liberty to the claims of brotherhood; and this was the new contribution which Christianity made to the ethics of the ancient world: it superseded or (perhaps it would be more correct to say) consummated the ethics of self-realization by the ethics of self-sacrifice.

Christianity therefore condemned libertinism as an offence against the common life of humanity. The 'liberty of indifference'—of doing what one likes—is rejected by the Christian ethic as an illustration of that ἀνομία which is sin (1 Jn 3^{4}). Undoubtedly the interpretation of liberty against which St. Paul and later teachers protested (cf. Irenæus, *adv. Hær.* I. vi. 3, quoted by von Dobschütz, p. 270, for an account of the practices of Valentinians, curiously parallel to those of the Corinthian Church) was a mark of immaturity in the early Christian communities, due to an exultant sense of a new unrestricted life; but the influence of Gnosticism, with its dualistic separation of spirit and matter, must also be taken into account as explanatory of the repeated appearances of libertinism in the primitive Church. On the other hand, the antagonism between flesh and spirit is inherent in human nature; even when sublimated into the convenient distinction of Hebraism and Hellenism, the one standing for righteousness, the other for freedom, the two tendencies represent a fixed duality in the moral and intellectual evolution of the race. Now one element and now the other holds the sway in the life of the individual and of the community; and no one who reads the history of the Church can be blind to the fact that in given periods one of the two has exercised the greater influence and created the type of religious witness which is associated with particular epochs. After the dark ages the Renaissance represents the revival of Hellenism; and to mediæval laxity in religious and social life succeeds the Reformation, which is the triumph of Hebraism. The swing of the pendulum from Puritanism to the excesses of the Restoration in England illustrates the fact that there are recurring reactions in national life which inevitably affect the ethical standard alike of Church and society. It is clear also that the conception of Christian liberty, always subject to the expansions of a virile intellectual or rationalistic consciousness, is bound to suffer restriction and limitation during a reaction to Puritanism of life and morals; and, when the Puritan wave has spent itself, human nature re-asserts itself in a desire to regain its lost or curtailed liberty of action. Thus in all ages of the Church the question of accommodation to the habits, customs, and recreations of secular society has to be faced by the individual Christian, and in the solution of the difficulty two opposite tendencies, parallel with those in the Corinthian Church, have always made themselves felt: we should now call them the broad and the narrow view. In the present age, when we have reached a pitch of civilization in which the resources of the natural universe are placed at the disposal of mankind to an extraordinary extent and the facilities of intercommunication, luxury, and amusement are multiplied for all sections of society, Christianity is still represented by the double ideal—the one proclaiming the width of the Christian freedom, the other its self-restraint and self-limitation. Take, *e.g.*, the attitude of the modern Christian to the theatre. This is but a repetition, under another set of conditions, of the problem which the early teacher of Christianity had to face. With all our advance in moral insight, our larger views of life and destiny, we have not yet superseded the ethical principles which served as a guide to St. Paul. The individual conscience still has to weigh over against the undoubted fact of Christian liberty the influence of the personal support of certain customs or institutions not wholly moralized, and, under certain circumstances, actually immoral, still has to take into account the effect of the exercise of liberty, in matters morally indifferent, upon others not so clear in their moral vision nor sufficiently strong to meet the demands of a new temptation, as well as upon those belonging to the same community whose conscience is sensitive. At the same time, it is clear that a policy of self-isolation on the part of the Christian in regard to the defective and degrading tendencies of given recreations leaves the latter as they are; and to many Christians who interpret liberty in the wider sense consideration of the public good is paramount in determining their attitude in the matter of supporting the drama or otherwise. The law of love is not less binding to-day than in the earlier ages of the Church. It may even be argued that the developed sense of human solidarity and brotherhood, in itself the offspring of Christianity, is educating the Christian conscience to solve all such questions of conscience by a reference to the good of the community as a whole. Yet even the love of humanity, which is but another aspect of the love of God, is determined in practice by our ethical conception of the *summum bonum* for humanity; and here the Christian ideal, more especially in relation to art, differs *toto orbe* from the cult of realism popular in many quarters to-day, which is based on the theory of 'art for art's sake,' regardless of the effect on public morality. Art enriches the common life only when regarded as 'a revelation of a deeper truth in things.'

'If it is taken merely *as* art, merely as a beautiful dream, it sinks into play, becomes a mere refined amusement, and loses all its real power over the human spirit. There could hardly be any worse sign of an age than that it regards art as a mere amusement, as a mere escape from the graver problems of life' (J. S. Mackenzie, *Manual of Ethics*[4], London, 1900, p. 443).

'All things are yours' (1 Co 3^{21}) is indeed the noblest charter of Christian freedom, but only when interpreted in the light of the succeeding words, 'ye are Christ's.' The possession of worldly treasure—literary, scientific, commercial, territorial—involves for the Christian in personal union with a Divine life a clear perception of the eternal amid the transitory, the unseen amid the temporal: his citizenship is in heaven; his real life lies in that ideal world which gives meaning, beauty, and power to the world of phenomena. Hence 'liberty' in the Christian sense is always limited by the sanctions of 'the mind of Christ'; in other words, by a reference to the ethical ideal for which Christ stands.

Less need be said as to the relation of Christian freedom to the institutions of the State, the laws of the State, and the established regulations and customs of organized communities, as this has been treated in the art. ETHICS AND MORALITY (Christian), vol. v. p. 474. It is well known that neither Christ nor the apostles encouraged revolt against the State, even when, as in the case of slavery, a national institution contradicted the essential teaching of the gospel, being content to lay down universal principles rather than directions for particular nations and phases of social evolution (cf. Mt 22^{21}, Mk 12^{17}, Lk 20^{25}, Ro 13^{1-7}, 1 P 2^{17}). St. Paul, in dealing with the mutual obligations of masters and servants, bases their relationship on the fact that both are slaves of a heavenly Master (Eph 6^{5-9}, Col 3^{22}–4^{1}). But the Christian ideas of human equality and brotherhood carried with them a revolutionary force which inevitably tended in the course of ages to modify social custom, legislation, and practice. As an ideal, brotherhood has yet to be realized, and the process of realization involves a perpetual conflict of interests. The rights of conscience are imperative, 'are inherent in Christian faith, and cannot be ignored in the interests either of despotism or of democracy' (see art. ETHICS AND MORALITY [Christian], *loc. cit.*). The pages of Christian history are crowded with the records of attempts to assert these rights in the face of persecution, State-edicts, and repressive measures, and the annals of religious liberty are glorious with heroisms and martyrdoms cheerfully endured for conscience' sake. How far passive resistance to State legislation, when the latter conflicts with conscience, may be justified is a subtle ethical problem which is settled variously according as the casuist exalts the sacredness of a particular issue above regard to the general well-being of society as a whole, or *vice versa*. On the other hand, the Church exists to moralize State legislation and to enlighten national institutions; it guards the great ideal of human brotherhood, which involves an equal opportunity for all, and it advocates and supports all effort to alleviate human misery and to remedy imperfect social conditions, and to defeat social injustices. In the ideal of liberty, equality, and fraternity the last stands first in the order of Christian thought (cf. Murray, *Handbook of Christian Ethics*, p. 31 f.). Equality flows from brotherhood—the Christian conception of a common family and one eternal Father.

'And this equality can have no meaning except as an equal right for all; nor can there be an equal right for all, which does not allow every individual liberty to act as he pleases. But every individual can enjoy this freedom in reality only when each is restricted from interfering with the freedom of the rest' (*ib.* p. 32).

Co-operation in industrial struggles such as those which the present generation is witnessing between capital and labour imposes restrictions upon liberty. Trade unions break down when the principle of Christian liberty is ignored and the will of the individual is not subordinated to a common purpose. And, as legislative restrictions tend more and more to curtail the liberty of the individual, in other words, as the laws of the State become more socialized, the obligations of Christian liberty 'to seek not its own, but the things of others' are proportionately more binding.

3. Christian liberty in relation to the intellect.—Over against the authority of the State, with which the individual conscience has often found itself in opposition, there is the authority of the Church, to which the individual member is supposed to subordinate his will and judgment. Limits of space prevent a full treatment of the subject of authority in relation to the individual judgment in matters of faith. Suffice it to say that the opponents of Christianity are in the habit of urging from a review of Church history that Christian freedom of thought has never been received with anything but stern measures of repression, that the heretic has frequently been treated as an immoral person, and that on the whole Catholicism has been the foe of human enlightenment and progress (see J. B. Bury, *History of Freedom of Thought*, London, 1914, for a clear, if prejudiced, statement of this point of view). No fair-minded person can deny the general reasonableness of this charge. The necessity of exercising rigid discipline within the system of the Church in the interests of internal order and unity, the exaction of obedience on the part of the hierarchy from each unit as an exercise in self-renunciation not without real spiritual benefit, and the safeguarding of the deposit of faith amid a worldly and corrupt society may be adduced as grounds of self-defence against the common charge; but the fact remains that the Church has often transgressed the spirit and example of its founder in its hostility to new thought and in the repression of rationalism, forgetting that orthodoxy and Christianity are not synonymous terms. Christ's general attitude towards heterodoxy was that of tolerance; this is shown by His reproof of Jewish exclusiveness more by implication than by actual condemnation in such references as we find to the Samaritans in St. Luke's Gospel (10^{33} 17^{16} 9^{51-56}; the reading 'Ye know not what manner of spirit ye are of' in the last passage is without strong critical authority, but the fact of His rebuke is recorded in v.[55]), by His outspoken rejection of narrowness in the passage Lk 9^{50}, 'Forbid him not: for he that is not against you is for you,' and by His emphasis on the ethical rather than the intellectual side of the Christian witness in Jn 7^{17}. To Him 'faith' was not assent to an intellectual proposition or formula, but the spirit of receptiveness in relation to Himself and His teaching.

The convenient distinction between a religion of authority and a religion of the spirit tends to break down in practice. The Society of Friends, without a ministry and without sacraments, yet becomes an organized fellowship with recognized principles ethical and spiritual, which are binding on its members. Authority runs into every sphere of thought as well as into religion. The infallible church of Catholicism is superseded by the infallible book of Protestantism; but, when both forms of authority are discredited, it does not follow that pure subjectivity is the only possible issue. In Christianity there must be a synthesis of the principle of inspiration with that of authority. The day of inspiration, so long as we believe in a Spirit that guides into all truth, is never at an end, while at the same time the corporate witness of the Christian Church in all epochs of its history cannot be ignored. The progress of Christianity depends, therefore, on an adequate recognition of both these factors—the *consensus sanctorum* and the openness of the reason to the light that lighteth every man. In a striking essay on 'The Principle of Authority' by A. E. J. Rawlinson (*Foundations*, London, 1912) it is stated that there are three stages in the life of the educated Christian: (*a*) bondage to authority—the stage proper to childhood; (*b*) the stage of 'abstract freedom,' *i.e.* the assertion of the right to criticize and, if necessary, to deny; leading on to (*c*) the stage of 'concrete freedom,' which is defined as voluntary assent on grounds of reason to what was formerly believed on authority. Many Christians never pass beyond the first stage; intellectually they remain unenlightened, but their religious experience is unaffected. The second stage is that in which Christian liberty comes into play as a factor in our moral and intellectual development. To repress the spirit of inquiry is to

let 'that capability and godlike reason fust in us unused' (Shakespeare, *Hamlet*, IV. iv. 38 f.), to imperil our moral and spiritual health, and to foreclose the possibility of a larger equipment for Christian influence. If the issue on the intellectual side is rejection of the doctrines hitherto accepted on authority, there still remain the witness of life and the experience of the saints. It is no doubt true that Christian experience is bound up with a conviction of the truth of certain doctrines, such as the existence of God, immortality, the divinity of our Lord, and the persistent activity of His spirit; but its moral earnestness and beauty remain as a perpetual challenge to those who reject doctrinal Christianity and thereupon feel justified in belittling its contribution to the ethical progress of humanity. On the one hand, it is possible to combine intellectual suspense and even scepticism with a high-minded allegiance to the moral teaching of Christ, and such inquirers after truth are not to be excluded from the fellowship either of individual Christians or of the organized Christian community in its various forms. On the other hand, the Church may legitimately demand from those to whom it does not refuse the right of private judgment that such judgment shall be exercised with becoming humility.

'He who would teach a new truth or reject an old (and to do so is a vocation to which in every generation some men are called) must both expect to meet in practice with the persecutions by which true prophets are assailed, and must also face the *prima facie* likelihood that his own prophecy may turn out false' (*ib.* p. 380).

Hence in actual practice within the limits of the Christian fellowship liberty of thought is restricted by the collective witness of the saints, by consideration of human fallibility, by the avoidance of arrogance, intolerance, and impatience, and by respect for simple faith which moves on traditional lines. If one may adapt a saying of T. H. Green (*Prolegomena to Ethics*, Oxford, 1884, p. 292), the Church is 'a society of which the members owe reciprocal services to each other,' simply as Christian to Christian. There must be no attempt to frown on the mind that is open to the newer light when ethically and intellectually equipped for the re-interpretation of ancient doctrine, nor is it to be forgotten that those who have been affected in spiritual outlook by the critical spirit which has modified the value of time-honoured creeds and formularies may yet be qualified to bring out of the treasury of their wisdom and devotion 'things both new and old.' It is a function of Christian liberty to harmonize *nova et vetera*, as giving their respective witness to the realization in humanity of the ever-developing Christian ideal. But, if the modernist as a reverent seeker after truth is tolerated, he in turn must exercise the grace of patience towards the traditionalist. Christian liberty is a great gift, but Christian charity is a greater.
